FACULTY OF ENGINEERING AND TECHNOLOGY

REGULATION -2012

CURRICULUM AND SYLLABUS
FROM
I TO VIII SEMESTERS
FOR

B.E.BIO TECHNOLOGY ENGINEERING
[REGULAR)

REGULATIONS-2012
CURRICULUM AND SYLLABUS FROM III TO VIII SEMESTERS FOR
B.E.BIO-TECHNOLOGY

SEMESTER I

S.No.	Course Title	Offering Department	L	T	P	C
THEORY						
1	English for Effective Communication	ENGLISH	2	1	0	3
2	Engineering Mathematics I	MATHS	3	1	0	4
3	Engineering Physics	PHY	2	1	0	3
4	Computer Foundation Program	CSE	2	1	0	3
5	Environmental Science & Engineering	CHE	3	1	0	4
6	Biochemistry- I	BTE	3	1	0	4
PRACTICAL						
7	Engineering Physics Lab	PHY	0	0	4	2
8	Computer Foundation Program Lab	CSE	0	0	4	2
9	Bio Chemistry I Lab	BTE	0	0	4	2
TOTAL						25

SEMESTER II

S.No.	Course Title	Offering Department	L	T	P	C
THEORY						
1	Business English	ENGLISH	2	1	0	3
2	Engineering Mathematics II	MATHS	3	1	0	4
3	Engineering Chemistry	CHEM	2	1	0	3
4	Basic Electrical Engineering & Basic Electronics Engineering	EEE/ECE	3	1	0	4
5	Introduction to Biotechnology	BTE	2	1	0	3
6	Programming in C	CSE	2	1	0	3
PRACTICAL						
7	Engineering Chemistry Lab	CHEM	0	0	4	2
8	Engineering Graphics	MECH	2	0	3	3
9	Basic Electrical & Electronics Engineering Lab	EEE/ECE	0	0	4	2
TOTAL						27

SEMESTER III

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1.		Cell Biology	3	0	0	3
2.		Microbiology	3	0	0	3
3.		Genetics	3	0	0	3
4.		Bio-organic Chemistry	3	0	0	3
5.		Biostatistics	3	1	0	4
6.		Principles of Chemical Engineering	3	1	0	4
PRACTICAL						
7.		Microbiology Lab	0	0	4	2
8.		Bio-organic Chemistry Lab	0	0	4	2
9.		Chemical Engineering Lab	0	0	4	2
		T	18	2	12	26

SEMESTER IV

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1.		Molecular Biology	3	0	0	3
2.		Enzyme Engineering and Technology	3	0	0	3
3.		Food Biotechnology	3	0	0	3
4.		Analytical Techniques in	3	1	0	4
5.		Instrumental Methods of Analysis	3	1	0	4
6.		Unit Operations	3	1	0	4
PRACTICAL						
7.		Cell and Molecular Biology Lab	0	0	4	2
8.		Instrumental Analysis Lab	0	0	4	2
9.		Professional Communication and	0	0	4	2
		T	**18**	**3**	**12**	**27**

SEMESTER V

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1.		Biochemistry II	3	0	0	3
2.		Immunology	3	0	0	3
3.		Protein Engineering	3	0	0	3
4.		Bioethics, Biosafety and IPR	3	0	0	3
5.		Chemical and Biological Thermodynamics	3	1	0	4
6.		Elective I	3	0	0	3
PRACTICAL						
7.		Biochemistry II Lab	0	0	4	2
8.		Immunology Lab	0	0	4	2
		TOTAL	18	1	8	23

SEMESTER VI

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1.		Genetic Engineering	3	0	0	3
2.		Plant and Animal Biotechnology	3	0	0	3
3.		Principles of Bioinformatics	3	0	0	3
4.		Bioprocess Engineering	3	0	0	3
5.		Mass Transfer Operations	3	1	0	4
6.		Elective II	3	0	0	3
PRACTICAL						
7.		Genetic Engineering Lab	0	0	4	2
8.		Bioprocess Engineering Lab	0	0	4	2
TOTAL			18	2	8	24

SEMESTER VII

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1.		Genomics and Proteomics	3	0	0	3
2.		Biopharmaceutical Technology	3	0	0	3
3.		Downstream Processing in Biotechnology	3	1	0	4
4.		Nano biotechnology	3	0	2	4
5.		Chemical Reaction Engineering	3	1	0	4
6.		Total Quality Management	3	0	0	3
PRACTICAL						
7.		Down stream process Engineering Lab	0	0	4	2
TOTAL			18	2	10	25

SEMESTER VIII

Sl.No	Course Code	Course Title	L	T	P	C
THEORY						
1.		Elective III	3	0	0	3
2.		Elective IV	3	0	0	3
3.		Elective V	3	0	0	3
PRACTICAL						
4.		Project Work	0	0	12	6
			9	0	12	15

LIST OF ELECTIVES

S.No	Sub	L	T	P	C
1	ImmunoTechnology	3	0	0	3
2	Cancer Biology	3	0	0	3

SEMESTER I	L	T	P	C
	2	1	0	3

ENGLISH FOR EFFECTIVE COMMUNICATION

(COMMON TO ALL BRANCHES)

UNIT - I **9**

Word formation with prefixes and suffixes, Antonyms & Synonyms-Tense Forms - Different kinds of Nouns and Pronouns - Use of Verbs and Adverbs - Adjectives - Sentence Pattern (SVOCA) - Conditional Sentences - Auxiliary and Modal verbs - Articles.

UNIT - II **9**

Phonetics (Vowels, Consonants and Diphthongs) - Pronunciation Guidelines - Vocabulary (Homophones).

UNIT - III **9**

Principles of Communication - Defining and Describing Objects - Listening for Information and Making Inferences - Understanding Ideas and Making Inferences.

UNIT - IV **9**

How to write reports, report writing - Recommendations - Discussing data and coming to conclusions - Rearranging the jumbled sentences.

UNIT - V **9**

Skimming - Scanning - Flowcharts - Pie-charts - Formal and Informal letters - Resume Writing.

Total: 45 hours

TEXT BOOK

1. English for Effective Communication, Departments of English, VMKV & AVIT. Erode: SCM Publishers, 2009.

REFERENCE BOOKS

1. M.Ashraf Rizvi, Effective Technical Communication. New Delhi: Tata McGraw Hill Publications, 2007.

2. Pickett and Laster. Technical English: Writing, Reading and Speaking. New York: Harper and Row Publications, 2002.

3. Cutts, Martin. The Plain English Guide - How to Write Clearly and Communicate Better. New Delhi: Oxford University Press, 1995.

4. Narayanaswami.V.R. Strengthen Your Writing. Chennai: Orient Longman Ltd., 1996.

5. Prof.K.R.Lakshmi Narayanan & Dr.T.Murugavel, Communication Skills for Engineers, Chennai: SCI Publications, 2002.

SEMESTER I	L	T	P	C
	2	1	0	3

ENGINEERING PHYSICS

(COMMON TO ALL BRANCHES)

UNIT - I LASERS 9

Einstein coefficients (A&B), Nd - YAG laser, CO2 laser, semiconductor laser (homojunction) - uses of lasers - Holography - construction and reconstruction of a hologram.

UNIT - II FIBRE OPTICS 9

Principle and propagation of light in optical fibres - numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) - Applications: Fibre optic communication system (block diagram only) - fibre optic sensors (displacement sensor and pressure sensor).

UNIT - III CRYSTAL PHYSICS 9

Lattice - unit cell - Bravais lattice - Lattice planes - Miller indices - "d? spacing in cubic lattice - calculation of number of atoms per unit cell - atomic radius - coordination number - packing factor for SC, BCC, FCC, HCP structures.

UNIT - IV ACOUSTICS 9

Classification of sound - characteristics of musical sound - loudness - Weber-Fechner law - decibel - absorption coefficient - experimental determination - reverberation - reverberation time - Sabine?s formula (no derivation) - factors affecting acoustics of buildings (reverberation time, loudness, focusing, echo, echolen effect, resonance and noise) and their remedies.

UNIT- V NON - DESTRUCTIVE TESTING 9

Liquid penetrant method - ultrasonic flaw detection - ultrasonic flaw detector (block diagram) - X-ray Radiography: displacement method - X-ray Fluoroscopy - merits and demerits of each method.

Total Hours: 45

TEXT BOOK

1. Gaur R. K. and Gupta S. L., "Engineering Physics", Dhanpat Rai publishers, New Delhi, 2001.

2. Rajendran. V, "Engineering Physics", Tata Mc Graw Hill Publication and Co New Delhi, 2009.

REFERENCE BOOKS

1. Pillai S.O "Solid State Physics", New Age International Publication, New Delhi, (2003).

3. Rajendran V and Marikani "Physics for Engineers", Tata McGraw Hill Publishing Company Ltd, New Delhi (2004).

4. Arumugam M, "Engineering Physics", Anuradha Agencies, Kumbakonam, Second Edition (2005).

SEMESTER I

L	T	P	C
2	1	0	3

ENGINEERING MATHEMATICS - I

(Common to MECH, ECE, CSE, CSSE, EEE, EIE, CIVIL, IT, MECHTRONICS, AERONAUCTICAL, ETC, BME & AUTOMOBILE)

OBJECTIVE : The syllabus for the Engineering Mathematics I have been framed catering to the needs of the Engineering students. It is purely applications oriented. To mention a few i) To utilize the powerful features of MATLAB one has to be an expert in Matrix theory (ii) The matrix theory plays an vital role in simplifying large arrays of equation and in determining their solution.(iii) Partial differential equation frequently occurred in the theory of elasticity and Hydraulics.(iv) In circuit branches the current flow can be calculated by using Laplace transform when EMF, resistance and inductions are known.

OUTCOME : At the end of this course the students will be in a position to apply the knowledge of Mathematics in the respective Engineering branches.

UNIT I - MATRICES 9

Characteristic equation - Eigen values and eigenvectors of a real matrix - Properties of eigenvalues and eigenvectors (Without proof) - Cayley-Hamilton theorem (excluding proof) - Orthogonal transformation of a symmetric matrix to diagonal form.

UNIT II - DIFFERENTIAL CALCULUS 9

Curvature - Cartesian and Parametric Co-ordinates - Centre and radius of curvature - Circle of curvature - Evolute

UNIT III - FUNCTIONS OF SEVERAL VARIABLES 9

Partial Derivatives - Total Differential - Maxima and Minima - constrained Maxima and Minima by Lagrangian Multiplier Method.

UNIT IV - LAPLACE TRANSFORMS 9

Laplace transform - transform of elementary functions - basic properties - derivatives and integrals of transforms - transforms of

derivatives and integrals - initial and final value theorems - Transform of periodic functions.

UNIT V - APPLICATIONS OF LAPLACE TRANSFORMS 9

Inverse Laplace transform - Convolution theorem - Initial and Final value theorem-Solution of linear ODE of second order with constant coefficients and first order simultaneous equation with constant coefficients using Laplace transforms.

Total hours	: 60
Lecture Hours	: 45
Tutorial Hours	: 15

TEXT BOOK

1. "Engineering Mathematics-I" by Department of Mathematics, VMU, Revised Edition 2013.

REFERENCE BOOKS

1. Veerarajan, T., "Engineering Mathematics", Tata McGraw Hill Publishing Co., NewDelhi, 2006.
2. Dr.A .Singaravelu , Engineering Mathematics Volume I & Volume II by Meenakshi Publications.
3. Grewal, B.S., "Higher Engineering Mathematics" (36th Edition), Khanna Publishers, Delhi 2001.
4. Kreyszig, E., "Advanced Engineering Mathematics" (8th Edition), John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
5. Kandasamy .P., Thilagavathy. K., and Gunavathy. K., "Engineering Mathematics", Volumes I & II (4th edition), S.Chand & Co., New Delhi., 2001.

SEMESTER I	L	T	P	C
	2	1	0	3

BIOCHEMISTRY - I

Credit : 3

(Common to Biotechnology and Bioinformatics)

OBJECTIVE : To understand the basic concepts of Biochemistry. This will be a prerequisite for the courses offered in the subsequent semesters.

OUTCOME : At the end of the course, the students would have learnt about

Basic principles of organic chemistry.

Structure and properties of carbohydrates and lipids.

Structure and properties of proteins and nucleic acids.

Functions and deficiency disorders of vitamins and minerals

UNIT I - INTRODUCTION TO BIOMOLECULES 9

Basic principles of organic chemistry, Classification of organic compounds based on functional groups : - C = C - , - C ? C - and those containing Halogens, Oxygen, Nitrogen and Sulphur, Homologous series, Common types of organic reactions - Substitution, Addition, Elimination and rearrangement, Isomerism - Structural and Stereo, R and S notation, E and Z notation, Conformers - Ethane, Cyclopentane, Types of biomolecules, Biological role, Biological buffers, Water and its importance.

UNIT II - CARBOHYDRATES AND LIPIDS 9

Carbohydrates - Classification, Structural elucidation and properties of Mono, Di, Oligo and Polysaccharides - Starch, Glycogen, Cellulose and their derivatives, Chitin, Peptidoglycans, Glycoaminoglycans, Glycoconjugates, Lipid - Classification (Fatty acids, Glycerolipids, Phospholipids, Glycolipids, Sphingolipids, Steroids), Physiological importance, Significance of Cholestelrol, Lipoproteins and its importance.

UNIT III - AMINO ACIDS AND PROTEINS 9

Amino acids - Classification, Structure, Properties and Biological importance. Proteins - Classification, Structure of Proteins - Primary, Secondary, Tertiary and Quaternary - Myoglobin and Hemoglobin, Properties and Biological importance, Test for Proteins.

UNIT IV - NUCLEIC ACIDS 9

Nucleic Acids - Structure and types of Purines, Pyrimidines, Nucleosides, Nucleotides, Ribonucleic acids, Deoxyribonucleic acids, Nucleoprotein complexes, Synthetic nucleotide analogs, Functions of Nucleotides, Carrier of chemical energy of cell, Enzyme cofactor, Regulatory molecules.

UNIT V - VITAMINS AND MINERALS 9

Vitamins - Source, Classification, Structure, Properties, Metabolism, Nutrition and Deficiency disorders, Minerals - Source, Metabolism, Function, Nutrition and Deficiency disorder.

Total: 45 hours

L	T	P	C
2	1	0	3

COMPUTER FOUNDATION PROGRAM

(COMMON TO ALL BRANCHES)

UNIT I - Basics of Computer and Information Technology 9

Digital computer fundamentals-Block diagram of a computer-component of a computer system Hardware and software definitions-Categories of software-Booting-Installing and Uninstalling Software-Software piracy-Software terminologies-Application of Computer-Role of Information Technology-History of Internet-Internet Services.

UNIT II - Problem Solving Methodologies and Techniques 9

Problems solving Techniques-Program development cycle-Algorithm-Design-Flow chart-Program control structures-Types and generation of programming languages-Development of algorithms for simple problems. Top down and Bottom up approaches of software development.

UNIT III - Basics of Computer Architecture and System Software 9

Fundamentals of Computer Architecture-Introduction-Organization of a small computer Central Processing Unit-Execution cycle-Instruction categories - measure of CPU performance Memory-Input/output devices-BUS-addressing modes.

System Software-Assemblers-Loaders and linkers-Compilers and interpreters.

UNIT IV - Basics of Operating System and DBMS 9

Introduction-Basics of memory management schemes-Scheduling-threads. Introduction to File and Database systems- SQL-DDL statements-DML statements-DCL statements.

UNIT V - Software Applications **9**

Office Automation: Application Packages-word processing-Spread sheet Application and Basics of HTML.

Total: 45 hours

SEMESTER I

L	T	P	C
3	1	0	4

ENVIRONMENTAL SCIENCE & ENGINEERING
(COMMON TO ALL BRANCHES)

UNIT - I - ENVIRONMENT AND NATURAL RESOURCES **9**

Environment - Definition , scope & importance - Public awareness - Forest resources , mineral resources , water resources, food resources , energy resources (uses, over -exploitation & adverse effects in each case) - Scope & role of environmental engineers in conservation of natural resources - Sustainability development.

UNIT - II - ECOSYSTEMS AND BIO - DIVERSITY **9**

Ecosystem - Definition, structure and function - Energy flow - Ecological succession - food chain, food web, ecological pyramids - Introduction, types, characteristics, structure and function of forest, grassland, desert and Aquatic ecosystems - Bio - Diversity : values and uses, hotspots, threats and conservation.

UNIT - III - ENVIRONMENTAL POLLUTION **9**

Pollution - Definition , man made impacts and control measures of air, water and land pollution - Water quality standards & characterization - Importance of sanitation -Nuclear hazards - Hazardous waste management : Solid waste, waste water and biomedical waste - Prevention of pollution and role of individual - Disasters management : Floods, earthquake, cyclone and land slides - Clean technology options.

UNIT - IV - SOCIAL ISSUES AND ENVIRONMENT **9**

Urban problems related to energy - Water conservation - Resettlement and rehabilitation of people - Environmental ethics - Climate change - Global warming - Acid rain - Ozone depletion- Waste land reclamation , Environment Protection Act for air, water , wild life and forests - Pollution Control Board.

UNIT - V - HUMAN POPULATION AND ENVIRONMENT **9**

Population growth - Population explosion - Family welfare programme - Environment & human health - Human rights - Value education - Women and child welfare, Role of information technology in environment and human health.

Total Hours: 45

TEXT BOOKS :

0	0	4	2

ENGINEERING PHYSICS LAB

(Common to all Branches)

List of Experiments

1. Young's modulus of a bar - Non-uniform bending
2. Rigidity modulus of a wire - Torsional Pendulum
3. Viscosity of a liquid - Poiseuille's method
4. Velocity of ultrasonic waves in liquids - Ultrasonic Interferometer
5. Particle size determination using Laser
6. Wavelength of spectral lines - grating - Spectrometer
7. Thickness of a wire - Air wedge Method
8. Thermal conductivity of a bad conductor - Lee's disc
9. Band gap determination of a thermistor - Post Office Box
10. Specific resistance of a wire - Potentiometer

SEMESTER II	L	T	P	C
	2	1	0	3

BUSINESS ENGLISH

(Common to all Branches)

UNIT - I **9**

Subject and Verb Agreement (Concord) - Active and Passive Voice, Impersonal Passive Voice - Preposition - Common Errors - Direct Speech and Indirect Speech - Cause and Effect - Phrasal Verbs and Idioms and Phrases - Question Tags - Vocabulary.

UNIT - II **9**

Stress (Word Stress and Sentence Stress) - Intonation - Differences in British and American English - Indianism.

UNIT - III **9**

Role Play - Telephonic Etiquettes - Interview Questions (Direct, Open-ended and Closed Questions) - E-mail Netiquette, Sample E-mails.

UNIT - IV **9**

Instruction - Check-list - Minutes of the Meeting and Writing Agenda - Note making.

UNIT - V **9**

Reading Comprehension - Interpreting Tables - Bar charts - Business Letters (Calling for Quotation, Placing Orders and Complaint Letters) - Essay Writing and Developing Hints.

Total: 45 hours

SEMESTER II	L	T	P	C
	3	1	0	4

BIO ENGINEERING MATHEMATICS - II

(Common to BIOTECHNOLOGY AND BIOINFORMATICS)

UNIT - I COMPLEX NUMBERS

Definition- Examples- Addition-subraction-multiplication and division of complex numbers, simple problems

UNIT-II DESCRIPTIVE STATISTICS

Frequency distribution- measures of central tendency: Mean, Median, Mode- Measures of dispersion: Moments, skewness and Kurtosis

UNIT -III PROBABILITY CONCEPTS

Definitions, sample space, Events, Axioms of probability, Law of addition of probability, Multiplication law and conditional probability, Baye's theorem (without proof)

UNIT -IV CORRELATION, REGRESSION & TEST OF SIGNIFICANCE

Correlation coefficient, Rank correlation - Regression lines. Student't' test, F- test, Chi- square test, Analysis of variance

UNIT -V PROBABILITY DISTRIBUTION

Random variable-Probability density function-distribution function-mathematical expectation-variance-discrete distribution-Binomail, Poission and exponential distributions and their propoerties.

Total hours: 60

SEMESTER II	L	T	P	C
	2	1	0	3

ENGINEERING CHEMISTRY

(Common to all Branches)

UNIT I - WATER TECHNOLOGY & CORROSION 9

Sources of water - impurities - Hardness and its determination (problems to be avoided) - boiler troubles - water softening (zeolite & Demineralisation) - Domestic water treatment - Desalination (Electrodialysis & Reverse Osmosis).

Corrosion - Types - principles - corrosion control methods (Sacrificial and Impressed current method).

UNIT II - ELECTROCHEMISTRY, BATTERIES AND FUEL CELLS 9

Ostwald Law and Debye Huckle?s law - Cells - Electrode (SHE, Calomel and Glass) - Electrode potential - Nernst equation - EMF series.

Primary cells - secondary batteries - charging and discharging.

UNIT III - CHEMISTRY OF ADVANCED MATERIALS 9

Portland cement -setting and hardening - RCC - Special cements. Organic electronic material, solid oxide materials, shape memory alloys, nanomaterials, polymers, fullerenes, ceramics, fibers, lubricants, refractories & composites (definition, classification and applications)

UNIT IV - PHASE EQUILIBRIA & NUCLEAR CHEMISTRY 9

Phase rule: statement and explanation of terms involved - One component system - Condensed phase rule - Two component system.

Nuclear Chemistry - Fission - Fusion - working of nuclear reactor - Radiations and harmful effects.

UNIT V - CHROMATOGRAPHY AND SPECTROSCOPY 9

Chromatography -- classification & principles (Paper, column, thin layer, gas, HPLC). Spectroscopy - Electromagnetic radiation - Beer Lambert?s law - UV - Visible - IR (Principle and Instrumentation, block diagram) - Atomic absorption spectroscopy.

Total: 45 hours

Text Book:

1. Engineering Chemistry by Jain & Jain,15th Edition, Dhanpat Rai Publishing Company (P) Ltd., New Delhi.

Reference Book:

1. A Text Book of Engineering Chemistry by Shashi Chawla, Edition 2012,Dhanpat Rai & Co, New Delhi.

2. A Text Book of Engineering Chemistry by S.S.Dara, S.Chand & Company Ltd, New Delhi.

3. Engineering Chemistry by Dr.Ravikrishna, Krishna Publications, Chennai.

SEMESTER II	L	T	P	C
	3	1	0	4

BASIC ELECTRICAL ENGINEERING & BASIC ELECTRONICS ENGINEERING (Common to ECE,ETCE,MECHT,BME,BT,BF,EEE,EIE,CSE,IT,CSSE AND CIVIL)

a) ELECTRICAL ENGINEERING

UNIT I **8**

Electrical Circuits & Meters

Definition of electromotive force, current, power and energy-International System of units-Ohm?s law and Kirchhoff?s laws-solution of series and parallel Circuits.

Generation of alternating voltage-average and RMS values-solution of simple R,RL,RC and RLC circuits- Calculation of power and power factor in AC circuits.

Construction and principles of operation of moving coil, moving iron and dynamometer instruments.

UNIT II **8**

DC Machines (Qualitative Treatment Only)

Dc machines -parts-DC generator-EMF equation-Different types of DC generators and their applications-DC motors and their applications-different types -speed control-Starters.

UNIT III **7**

AC Machines (Qualitative Treatment Only)

Construction & principle of operation of transformers-Single phase & Three phase transformers-Construction and operation of

AC motors-Single phase and three phase Induction motors-applications-construction, principles of operation and application of synchronous motors.

b) ELECTRONICS ENGINEERING

UNIT I: SEMICONDUCTOR DEVICES AND APPLICATIONS **8**

Passive and Active Components - Resistors, Inductors, Capacitors, Characteristics of PN Junction Diode - Zener Effect - Zener Diode and its Characteristics - Half wave and Full wave Rectifiers - Voltage Regulation.

Bipolar Junction Transistor - CB, CE, CC Configuration and Characteristics.

UNIT II: FUNDAMENTALS OF COMMUNICATION ENGINEERING **8**

Types of Signals: Analog and Digital Signals - Modulation and Demodulation: Principles of Amplitude Modulation, Angle Modulation, Pulse Amplitude Modulation, Pulse Width Modulation and Pulse Code Modulation Communication Systems: Radio, High DefinitionTV, MODEM, Fax, Microwave, Radar, Satellite and Optical Fibre, Mobile-Cellphones (block diagram description only).

UNIT III : STUDY OF ADVANCED ELECTRONIC GADGETS **7**

High Definition Camera,High Definition Video Camera,Tablet PC,Android Phones,i pods,Video Game Consoles

Total Hours: 46

SEMESTER II

L	T	P	C
2	1	0	3

INTRODUCTION TO BIOTECHNOLOGY

(BTE ONLY)

UNIT I **8**

INTRODUCTION

Biotechnology: An overview- What is biotechnology? Biotechnology, an interdisciplinary pursuit, Old and New Biotechnology, Scope and importance, Commercial potential, Public perception of Biotechnology, Biotechnology in India.

UNIT II **10**

GENERAL AND INDUSTRIAL BIOTECHNOLOGY

Isolation and screening of micro organisms, Bioreactors, Process development, Scale up and Media design for Fermentation Process, Food and Beverage Fermentation, Enzymes and Food Processing, Immobilization of enzymes, Biotransformatios, Production of Single cell Protein (SCP), SCP derived from Algae, Wastes, Agricultural crops and Economic implications of SCP, Production of Bioethanol and Biodiesel, Biosensors.

UNIT III **9**

BIOTECHNOLOGY IN AGRICULTURE AND ENVIRONMENT

Biotechnology methods of crop improvement, Plant tissue culture, Transgenesis, Transgenic plants, Applications of Transgenic plants, Transgenic animals, Novel and Better, Bioinsecticides, Biofertilizers. Contributions of Biotechnology in Waste water Treatment and Environment Management, Biodegradation of Xenobiotic Compounds.

UNIT IV **9**

PROCESS TECHNOLOGY AND MICROBIAL PRODUCTION

Perocess Technology for the Production of Cell Biomass and some Primary Metabolites, e.g. Ethanol, Acetone-Butanol and citric acid. Microbial production of industrial enzymes-Glucose isomerase, cellulose etc., Production of secondary metabolites-Pencillin, Tetracycline etc. Production of Vaccines.

UNIT V **9**

BIOTECHNOLOGY IN HUMAN WELFARE AND ETHICS

Conventional vaccines, Recombinant vaccines, DNA vaccines, Monoclonal Antibiodies and Detection of Genetic Diseases, Interferons, Drug designing, Gene theraphy, Forensic Medicine applications of Human Genetic Research. Biotechnology: Legal aspects- Genetically manipulated organisms and Environment, Biosafety, Social, Moral and Ethical consideration.

Total : 45 Hours

TEXT BOOKS

1. Kumar, H.D. Modern Concepts and Biotechnology. Vikas Publishing House Pvt. Ltd.

2. Gupta, P.K. Elements of Biotechnology. Rastogi Publications.

3. Jogdand, S.N., 2003. Environmental Biotechnology. Himalaya Publishing House.

4. Satyanarayana, 2005. Biotechnology.

REFERENCES

1. John E. Smith. Biotechnology. Cambridge Press. 3rd Edn.

2. Glazer, A. and Noickaido, 1995. Microbial Biotechnology-Fundamentals of Applied Microbiology.

3. www.techport.ac.uk/tud/bd/univpo.

SEMESTER II	L	T	P	C
	2	1	0	3

PROGRAMMING IN C

(Common to all Branches)

UNIT I **9**

Introduction: Algorithms & flowcharts-Overview of C-Features of C-IDE of C Structure of C program-Compilation & execution of C program-Identifiers, variables, expression, keywords, data types, constants, scope and life of variables, local and global variables. Operators: arithmetic, logical, relational, conditional and bitwise operators- Special operators: size of () & comma (,) operator-Precedence and associativity of operators & Type conversion in expressions.

Basic input/output and library functions: Single character input/output i.e. getch(), getchar(), getche() & putchar()-Formatted input/output: printf() and scanf()-Library Functions: concepts, mathematical and character functions.

UNIT II **9**

Control structures: Conditional control-Loop control and Unconditional control structures.

Functions: The Need of a function-User defined and library function- Prototype of a function-Calling of a function-Function argument-Passing arguments to function- Return values-Nesting of function- main()-Command line arguments and recursion. Storage class specifier - auto, extern, static, & register.

UNIT III **9**

Arrays: Single and multidimensional arrays-Array declaration and initialization of arrays-Array as function arguments. Strings: Declaration-Initialization and string handling functions. Structure and Union: Defining structure-Declaration of structure variable-Accessing structure members-Nested structures-Array of structures-Structure assignment-Structure as function argument-Function that returns structure- Union.

UNIT IV **9**

Pointers: The "&? and * operators-Pointers expressions-Pointers vs arrays-Pointer to functions-Function returning pointers-Static and dynamic memory allocation in C.

DMA functions: malloc(), calloc(), sizeof(), free() and realloc()-Preprocessor directives.

UNIT V **9**

File management: Defining, opening & closing a file, text file and binary file- Functions for file handling: fopen,fclose, gets, puts, fprintf, fscan, getw, putw, fputs, fgets, fread, fwrite-Random access to files: fseek, ftell, rewind-File name as Command Line Argument.

5. Subbura.R , "Programming in C?, Vikas publishing, 1st Edition,

SEMESTER II	L	T	P	C
	0	0	4	2

ENGINEERING CHEMISTRY LAB

(Common to all Branches)

1. Estimation of total hardness of water sample by EDTA method.

2. Determination of alkalinity by indicator method.

3. Estimation of ferrous ion by Potentiometry.

4. Titration of strong acid with strong base by Conductometry.

5. Acid base reaction by pH metry.

6. Estimation of copper from its ore.

7. Estimation of iron by spectrophotometer.

8. Estimation of sodium by flame photometer.

SEMESTER II L T P C
0 0 4 2

BASIC ELECTRICAL & ELECTRONICS ENGINEERING LAB (Common to ECE, ETCE, MECHT, BME, BT, BF, EEE, EIE,CSE,IT,CSSE AND CIVIL)

a) ELECTRICAL ENGINEERING LAB

LIST OF EXPERIMENTS

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.

2. Fluorescent lamp wiring.

3. Stair case wiring

4. Measurement of electrical quantities - voltage, current, power & power factor in RLC circuit.

5. Measurement of energy using single phase energy meter.

6. Measurement of resistance to earth of electrical equipment.

B) ELECTRONICS ENGINEERING LAB

1. Familiarization with Electronic Components like R, L, C and active devices.

2. Familiarization with Bread board, CRO, Power supply (RPS, FPS) and Soldering Practice.

3. Generation of lissajous patterns using CRO.

4. Measurement of amplitude and time period using CRO.

5. Study of the Characteristic of PN-Junction diode with its applications.

6. Study of the Characteristic of Zener diode with its applications

7. Study of the rectifier circuits (Half wave and Full Wave) with its applications.

8. Study of BJT Characteristics with its applications.

9. Study of AM/FM Receiver.

10. Study of advanced electronic gadgets.

YEAR II		L	T	P	C
SEMESTER	III	3	0	0	3

CELL BIOLOGY

AIM :

The course aims to develop skills of the students in the area of Cell biology and cell signalling pathways. This will be a prerequisite for courses like Molecular biology.

OBJECTIVES :

At the end of the course, the students would have gained extensive knowledge on

- Functions of the organelles.
- Cell membrane and permeability.
- Cell signalling molecules.
- Signal transduction.
- Cell culture.

UNIT I 9

CELL AND FUNCTIONS OF THE ORGANELLES

General structure - Prokaryotic and eukaryotic cell, Molecular organization of the cell membrane, Cell membrane - Proteins, Lipids and Carbohydrates, Cytoskeletal proteins, Types of cell functions, Cell division, Mitosis and meiosis, Cell cycle.

UNIT II 9

CELL MEMBRANE AND PERMEABILITY

Passive and active transport, Permeases, Sodium potassium pump, Ca2+, AT Pase pumps, Lysosomal and vacuolar membrane ATP dependent proton pumps, Co-transport, Uniport, Symport, Antiport, Transport into prokaryotic cells, Endocytosis and exocytosis, Entry of viruses and toxins into cells.

UNIT III 8

CELL SIGNALLING MOLECULES AND THEIR RECEPTORS

Cytosolic, Nuclear and membrane bound receptors, Examples of receptors, Modes of cell - cell signalling - Autocrine, Paracrine and Endocrine models of action, Secondary messengers molecules, Quantitation and characterization of receptors.

UNIT IV 10

PATHWAYS AND INTRACELLULAR SIGNAL TRANSDUCTION

Signal amplification - Different models of signal amplifications, Cyclic AMP, Role of inositol phosphates as messengers, Biosynthesis of inositol triphosphates, Cyclic GMP and G proteins role in signal transduction, Calcium ion flux and its role in cell Signalling, Current models of signal amplification, Phosphorylation of protein kinases.

UNIT V 9

CELL CULTURE

Techniques for the propagation of prokaryotic and eukaryotic cells, Cell line, Generation of cell lines, Maintenance of stock cells, Characterization of cell, Morphological analysis techniques in cell culture, Explant cultures, Primary cultures, Contamination, Differentiation.

TEXT BOOKS

Total : 45 Hours

1. De Robertis and De Robertis. Cell Biology. 8th Edn., B.I. Publications Pvt. Ltd.

2. James D. Watson. Molecular Biology of the Cell.

4. Geoffrey M. Cooper and Robert E. Hausman, 2007. The Cell : A Molecular Approach, 4th Edn., ASM Press and Sinauer Associates Inc.,USA.

5. Ian Freshney, R, 2005. Culture of Animal Cells. 4th Edn., Alan R. Liss Inc., New York.

YEAR II		L	T	P	C
SEMESTER	III	3	0	0	3

MICROBIOLOGY

AIM

To know the fundamentals of Microbiology by studying the Characteristic structural organisation and replication of microorganisms, Microscopy, Microbial nutrition, Role of microbes in food, clinical and ecological importance of microbes and their control.

OBJECTIVES

o To have knowledge about the World of microorganisms and microscopy.

o To study the Structure and replication concepts of microorganisms.

o To know the requirements of Microbial nutrition for growth of microorganisms and the impact of environment on its growth.

o To understand the effects of Microbes in food and the clinical importance of microorganisms.

o To evaluate the Control of microorganisms and its environmental applications.

UNIT I 9

WORLD OF MICRORGANISMS AND MICROSCOPY

Historical review of the foundation of microbiology, Taxonomy methods of studying microorganisms, Microscopy - Light, Electron, Micrometry.

UNIT II 8

STRUCTURAL ORGANISATION AND REPLICATION OF MICROORGANISMS

General structural organisation of bacteria and viruses, Characteristics of microorganisms, Differentiation and development, Multiplication of bacteriophages, Eukaryotic microorganisms such as Yeast - Cellular organization and reproduction.

UNIT III 8

MICROBIAL NUTRITION AND ENVIRONMENT

Nutritional requirements, Growth of microorganisms, Aerobic and anaerobic growth, Different methods of microbial enumeration, Methods of preservation of microbes. Effects of physical and chemical factors on microbial growth.

UNIT IV 10

FOOD AND CLINICAL MICROBIOLOGY

Food poisoning, Food spoilage and Food preservation, Beneficial microorganisms and products, Clinically important microorganisms and their effects on infections and immunity, Formation of toxic materials by microorganisms and their role in clinical microbiology.

UNIT V 10

CONTROL OF MICROORGANISMS AND ITS ENVIRONMENTAL APPLICATIONS

Drug, Chemotherapy, Antimicrobial agents and disinfectants, Diseases caused by microorganism and control, Ecology - Recycling of biomaterials, Production of biogas, Leaching of ores by microorganisms, Microbial indicators, Biofouling, Microbes in Air, Drinking water and Waste water, Polution control through use of consortium of microorganisms.

5. James, M.J., 1987. Modern Food Microbiology. CBS Publishers and Distributors.

YEARII		L	T	P	C
SEMESTER	III	3	0	0	3

GENETICS

AIM

The course is aimed to make the student knowledgeable about the basic concepts of Genetics

OBJECTIVES

o To understand the basic concept of Classical genetics through Mendelian experiment.

o To study the Structural organisation of chromosome.

o To know the Genetical disorders with reference to alleles.

o To impart knowledge on Linkage and crossing over.

o To learn the mechanism of Genetic transfer.

UNIT I 9

BASIC OF GENETICS

Classical genetics, Mendelian laws, Mendel's experiment monohybrid and dihybrid inheritance.

UNIT II 9

KARYOLOGY

Chromosome structure and organisationin prokaryotes and eukaryotes, Giant chromosome - Polytene and Lampbrush chromosome.

UNIT III 9

ALLELES

Classical concept of allelomorphism - Problems, Multiple alleles, Sex linkage in Drosophila, Sex linked lethal in Drosophila - Sex determination in Human beings, Sex linkage in Human beings, Colour blindness, Haemophilia, Blood group antigens.

UNIT IV 9

LINKAGE AND CROSSING OVER

Coupling and repulsion - Hypothesis, Test cross in maize and Crossing over, Sex chromosomes, Sex linked inherited disorders, Linkage, Crossing over and Genetic mapping of chromosomes.

UNIT V 9

GENETIC TRANSFER

Identification of the genetic material - Classical experiments, Hershey Chase, Avery McLeod etc., Conjugation, Transduction and Transformation, Transposons.

Total : 45 Hours

YEAR II	L	T	P	C
SEMESTER III	3	0	0	3

BIO-ORGANIC CHEMISTRY

AIM

To deal with the basic considerations of Bio-organic chemistry and the chemistry involved in the Biological systems.

OBJECTIVES

o To know the Basic consideration and proximity effect in Bio-organic chemistry.

o To discuss the Chemistry of amino acids and peptides.

o To study the Chemistry involved in enzymes.

o To impart knowledge on the Enzyme models.

o To enlighten the role of Metal ions which are essential for biological systems.

UNIT I 8

INTRODUCTION TO BIO-ORGANIC CHEMISTRY

Basic Considerations - Proximity effects in Organic chemistry - Molecular recognition and the supramolecular systems - Ion channels - Catalytic antibodies - Ribosomes.

UNIT II 9

BIO - ORGANIC CHEMISTRY OF AMINO ACIDS AND PEPTIDES

Chemistry of living cells, Analogy between organic reactions and Biochemical Transformations, Chemistry of the peptide bond, Peptide synthesis - Non-ribosomal and Solid state peptide synthesis, Asymmetric synthesis of amino acids - Retrosynthetic analysis, Transition state analogues.

UNIT III 9

ENZYME CHEMISTRY

Introduction to catalysis - Mut ifunctional, Acid - base and Covalent catalysis, Introduction to enzymes - ? - Chymotrypsin, Pyruvate dehydrogenase, Ribonuclease, Lysozyme, Enzymes in synthetic organic chemistry, Design of molecular clefts.

UNIT IV 9

ENZYME MODELS

Host guest Complexation chemistry - Cyclodextrin, Development in Crown ether chemistry - Azo Crown ethers and Lariat Crown ethers, Membrane chemistry and micelles, Enzyme design using steroid templates - Remote functionalisation reaction - Biomimetic polyene cyclisations, Co - enzyme chemistry - NAD, NADP, FAD and pyridoxal phosphate.

UNIT V 10

METAL IONS IN BIOLOGICAL SYSTEMS

Metal ions in proteins and biological molecules - Carboxy peptidase and role of zinc, Hydrolysis of amino acid esters, amides and peptides, Iron and oxygen transport, Copper ion, Biomodels for photosynthesis and energy transfer, Cobalt and Vitamin B12 actions.

Total : 45 Hours

YEAR II	L	T	P	C
SEMESTER III	3	1	0	4

BIOSTATISTICS

AIM

This course aims at providing the required skill to apply the statistical tools in engineering problems.

OBJECTIVES

The students will have a fundamental knowledge of

- o Concepts of probability.
- o Standard distributions which can describe real life phenomenon.
- o Sampling distribut ions
- o Statistical techniques used in management problems.
- o Analysis of Variance

UNIT I 9

INTRODUCTION

Statistics - Definition, Scope, Limitation. - Collection of data - Primary & Secondary Data; Classification & Tabulation of data - Type of Classification & Tabulation - Difference between Classification & Tabulation. Diagrammatic and Graphical representation of data - Type & significance.

UNIT II 9

SAMPLING

Sampling : - Method of Sampling - Random and Non-Random Sampling - Merits and Demerits, Limitation of sampling. Measure of central tendency - Arithmetic mean, median, Mode - Limitations. Measures of Dispersion - Range.

UNIT III 9

SKEWNESS, MOMENTS & KURTOSIS

Measure of Skewness and Kurtosis - Correlation analysis - Regression equations and analysis - Difference between Regression and Correlation.

UNIT IV 9

TEST OF SIGNIFICANCE

Chi - square test for association of attributes and goodness of fit, F - test for variance of two populations. t - test : Test of significance for mean, Paired t - test for difference of means.

UNIT V 9

DESIGN OF EXPERIMENTS

Analysis of variance - One way classification - Completely Randomized Design - Two -way classification - Randomized Block Design - Latin square.

Tutorial : 15

Total : 60 Hours

YEAR II	L	T	P	C
SEMESTER III	3	1	0	4

PRINCIPLES OF CHEMICAL ENGINEERING

AIM

To make the students knowledgeable and help them to understand the principles of stoichiometry in Biochemical processes.

OBJECTIVES

To emphasize the concepts of

- o Stoichiometry
- o Material balance with and without chemical reaction.
- o Principles of Humidity and solubility.
- o Principles of Energy balance.
- o Principles of Combustion.

UNIT I 10

STOICHIOMETRY

Introduction, Units and dimensions, Stoichiometric pr inciples, Composition relation - Atomic, Molecular, Equivalent weights, Molar concepts - Moles, Mole fraction, Mass fraction, Mixtures and solutions - Molarity, Molality and Normality, Density and specific gravity, Conversion factors, Ideal Gas law, Gaseous mixtures - Dalton's law of additive volumes, Dimensional analysis.

UNIT II 9

MATERIAL BALANCES

Material balances without chemical reactions - Overall and component balances, Distillation, Evaporation, Drying, Recycling and bypass, Material balance of unsteady state operations. Material balances with chemical reactions - Limiting reactant, Excess reactant, Recycling and bypass.

UNIT III 9

VAPOUR PRESSURE, HUMIDITY AND SOLUBILITY

Vapour pressure - Effect of temperature, Humidity and saturation, Vapourization, Condensation, Solubility and crystallization, Dissolution.

UNIT IV 9

ENERGY BALANCE

Thermochemistry - Calculation of heat of reaction at other temperatures - Hess's law of summation, Latent heat - Heat of formation, Reaction, Mixing, Combustion, Heat capacity, Mean specific heat, Theoretical flame temperature.

UNIT V 8

COMBUSTION

Introduction, Flue gas, Orsat analysis, Theoretical air, Excess air, Determination of products of combustion of solid, liquid and gaseous fuels, Calculation of excess air.

Tutorial : 15

Total : 60 Hours

TEXT BOOKS

SEMESTER	III	0	0	4	2

MICROBIOLOGY LAB

AIM

To give an opportunity of verifying the Theoretical concept by experimentally in a more explicit and concentrated manner.

OBJECTIVES

The students should understand the basic concepts of Microbiology, develop their skills in the preparation, identification and quantification of Microorganisms.

EXPERIMENTS

1. Sterilisation Techniques.
2. Culture Media Preparations a. Broth type media

b. Agar

3. Culturing of Micro organisms

a. Pure Culture techniques

- Streak plate
- Pour plate

4. Isolation, Enumeration and Purification of Microbes from a given sample.
5. Preservation of Bacterial Culture.
6. Identification of Micro organisms a. Staining techniques
   - Simple
   - Gram
   - Spore
   - Hanging drop

b. Biochemical testing

7. Quantitation of Microorganisms

a. Microscopy and micrometry b. Dry weight

c. Serial dilut ion plating

8. Environmental Sample Analysis

- Quantitative estimation of Pathogenic and non-Pathogenic Micorbes from Sewage and Soil samples.

9. Food Microbiology

- Milk
- Fermented food

10. Clinical Microbiology

REFERENCES

- Blood and Urine Culture

- Antibiotic Disc test Assay.

YEAR II	L	T	P	C
SEMESTER III	0	0	4	2

BIO-ORGANIC CHEMISTRY LAB

AIM : To verify the Theoretical concepts practically in a more Explicit and Concentrated manner.

OBJECTIVES : The Students should be able to develop their skills in the interconversions of Carbohydrates and Preparation of Amine acids.

EXPERIMENTS

1. Synthesis of Aspirin

2. Hydrolysis of Sucrose

3. Preparation of Pyruvic acid from Tartaric acid.

4. Preparation of Oleic acid

5. Carbohydrate Interconversions

a. Preparation of alpha-D-glucopyranose penta acetate

b. Preparation of 1,2,5,6 di- O-Cyclohexylidine-alpha-D-glucofuranose.

6. Preparation of Lycopene from Tomato paste

7. Preparation of l-Proline.

8. Preparation of l-Cystine from hair.

9. Preparation of s-ethyl hydroxybutonate from ethyl acetoacetate using Yeast.

10. Preparation of s-ethyl hydroxybutonate using 3,5 dinitrobenzoate.

REFERENCE

1. Fummis, B. S., Hannaford, A. J. and Smith, P. W. G., 1995. Textbook of Practical Organic Chemistry, Longman Edition, 1995

YEAR II	L	T	P	C
SEMESTER III	0	0	4	2

CHEMICAL ENGINEERING LAB

To develop hands on training in some of the aspects of Chemical engineering.

OBJECTIVES

o At the end of this course, the student would have learnt about Filtration, Distillation, Fluidization and Crushing procedures. The knowledge gained can be applied in industries and projects.

1. Flow measurement.
2. Filtration.
3. Heat exchangers.
4. Simple and Steam distillation.
5. Fluidization.
6. Pressure drop in pipes and packed columns.
7. Distillation in packed column.
8. Liquid - liquid equilibria in extraction.
9. Adsorption equilibrium.
10. Jaw crusher.
11. Determination of Screen effectiveness.
12. Sedimentation.

REFERENCE

1. Laboratory Manual.

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

MOLECULAR BIOLOGY

The course offers the fundamental concepts and basic principles of Structure of DNA, RNA, Transcription, Translation, Gene regulation and Recombinant DNA technology.

OBJECTIVES

o To gain knowledge on Nucleic acids, their characteristics and organization.

o To learn the process of Transcription.

o To understand the principles and mechanism of translation.

o To study the mechanism of Gene regulation and mutations.

o To familiarize with the fundamentals of Recombinant DNA technology.

UNIT I 10

NUCLEIC ACIDS AND DNA REPLICATION

Nucleic acids - Primary, Secondary and Tertiary structures, Extra chromosomal DNA, Replication in prokaryotes and eukaryotes - Different modes of replication, Complex replication apparatus, Inhibitors of replication, DNA polymorphism, Single Nucleotide Polymorphism (SNPs).

UNIT II 8

TRANSCRIPTION

Exon, Intron, Promoters, Enhancers, Transcription factors, Inhibitors, Transcription in prokaryotes and eukaryotes, Post transcriptional modifications, Reverse transcription.

UNIT III 10

TRANSLATION

Genetic code and its features, Deciphering of the genetic code, Colinearity of gene and polypeptide, Structure and functions of

ribosomes, Translation mechanism, Post translational modifications, Protein folding.

UNIT IV 9

REGLATION OF GENE EXPRESSION

Gene regulation - Operons : Lac, trp, ara and gal, Lamda phage life cycle and gene regulation.

UNIT V 8

MUTAGENESIS AND REPAIR

Mutagens, DNA Mutations and their mechanism, various types of DNA repair mechanism.

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

ENZYME ENGINEERING AND TECHNOLOGY

AIM

The course provides an opportunity to understand the theoretical concepts of Enzyme technology principles in an explicit and concentrated manner.

OBJECTIVES

To impart knowledge on

- o Isolation and purification of enzymes.
- o Mechanism of enzyme action.
- o Enzyme immobilization techniques.
- o Immobilized enzyme reactors.
- o Applications of enzymes.

UNIT I 9

CLASSIFICATION, PURIFICATION AND CHARACTERIZATION OF ENZYMES FROM NATURAL SOURCES

Classification of enzymes, Production and purification of crude enzyme extracts from plants, Animals and microbial sources - Case studies (Isolation and purification of lipase from microbial sources), Methods of characterization of enzymes, Overview of enzymatic assays.

UNIT II 10

MECHANISMS AND KINETICS OF ENZYME ACTION

Mechanisms of enzyme action, Concept of active site and energetics of enzyme substrate complex formation, Specificity of enzyme action, Kinetics of single substrate reactions - Michaelis - Menton kinetics, Determination of Km, Lineweaver - Burk plot, Eadie - Hofstee plot, Hanes - Woolf plot, Multi substrate reaction mechanisms (Ping - Pong, Bi- Bi and Rando m Bi - Bi).

UNIT III 9

INHIBITION OF ENZYME ACTIVITY AND ENZYME IMMOBILIZATION

Types of enzyme inhibition - Competitive inhibition, Uncompetitive inhibition, Non- competitive inhibition, Mixed inhibition, Substrate inhibition, Allosteric inhibition, Irreversible inhibition, Physical and chemical techniques for enzyme immobilization - Adsorption, Matrix entrapment, Encapsulation, Cross - linking, Covalent binding etc., Advantages and disadvantages of different immobilization techniques, Application of immobilized enzyme systems.

UNIT IV 8

IMMOBILIZED ENZYME REACTORS AND DIFFUSIONAL LIMITATIONS

Immobilized enzyme reactors - Packed bed, Fluidized bed, Membrane reactors, Air - lift bioreactors and CSTRs suited for immobilized enzymes. Diffusion effects in surface - bound enzymes on non-porous support materials, Diffusion effects in enzyme immobilized in a porous material.

UNIT V 9

APPLICATIONS OF ENZYMES

Applications of enzyme in disease diagnosis, Food industry, Pharmaceutical industry and Paper industry. Enzyme electrodes as biosensors - Calorimetric, Opt ical and Potentiometric biosensors, Applications of biosensors.

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

FOOD BIOTECHNOLOGY

AIM

To get knowledge in the field of Food process technology and its applications.

OBJECTIVES

To understand the role of

- o Biomolecules in food.
- o Food additives in food processing.
- o Microorganism in food fermentation.
- o Microorganism in food spoilage.
- o Microorganism in food preservation.

UNIT I 9

FOOD AND ENERGY

Constituents of food - Carbohydrates, Lipids, Proteins, Water, Vitamins and Minerals, Dietary sources, Role and functional properties in food, Contribution to organoleptic and textural characteristics, Biotechnology in relation to the food industry.

UNIT II 9

FOOD ADDITIVES

Classification, Intentional and non-intentional additives, Functional role in food processing - Meat, Fisheries, Vegetables, Food colourants - Natural and Artificial, Food flavours, Enzymes as food processing aids.

UNIT III 9

MICROORGANISMS ASSOCIATED WITH FOOD

Bacteria, Yeast and Molds - Sources, Types and Species

of importance in food processing and preservation, Fermented foods - Dairy products, Meat, fishery, Non- beverage plant products, Beverages and Related products, Single cell protein.

UNIT IV 9

FOOD BORNE DISEASES

Classification, Food infections - Bacterial and other types, Food intoxications and poisonings - Bacterial and non-bacterial, Food spoilage - Factors responsible for spoilage, Spoilage of vegetable, Fruit, Meat, Poultry, Beverage and Other food products.

UNIT V 9

FOOD PRESERVATION

Principles involved in the use of sterilization, Pasteurization and Blanching, Thermal death curves of microorganisms, Canning, Frozen storage - Freezing characteristics of foods, Microbial activity at low temperatures, Factors affecting quality of foods in frozen storage, Irradiation preservation of foods.

Total : 45 Hours

11. James, M.J., 1987. Modern Food Microbiology. CBS Publishers and Distributors.

YEAR II	L	T	P	C
SEMESTER IV	3	1	0	4

ANALYTICAL TECHNIQUES IN BIOTECHNOLOGY

AIM

To have a wide knowledge about the different techniques used for isolation, identification and detection of Biomolecules.

OBJECTIVES

o To introduce the basic principles of Chromatographic techniques.

o To impart knowledge on the principles, instrumentation and applications of all

Chromatographic techniques.

o To study in detail the different types of Centrifugation and its uses.

o To know the qualitative analysis of Protein by various electrophoretic techniques and to have a wide knowledge about the DNA analysis.

o To study the various Immunotechniques and analysis of Bioprocess.

UNIT I 10

INTRODUCTION

Classification of techniques, Paper and columnchromatography, Distribution coefficients, Retention chromatography, Sorption mechanisms, Retention parameters, Factors affecting retention, Qualitative and quantitative aspects of chromatography, Peak shape sorption isotherms, Column efficiency, Band broadening process, Selectivity and resolut ion.

UNIT II 8

CHROMATOGRAPHIC TECHNIQUES

Ion exchange, Size exclusion, Thin Layer Chromatography (TLC), High Performance Liquid Chromatography (HPLC), Gas chromatography - Mass spectroscopy, Chiral chromatography.

UNIT III 9

CENTRIFUGATION TECHNIQUES

Principles of centrifugation, Instrumentation, Preparative centrifugation - Differential centrifugation, Density gradient, Rate zonal centrifugation, Isopycnic centrifugation, Analytical centrifugation.

UNIT IV 8

ELECTROPHORETIC TECHNIQUES AND DNA ANALYSIS

Electrophoresis of Proteins and Nucleic acids, 1D and 2D Gels, Pulsed - Field electrophoresis, Capillary electrophoresis, Western Blotting, Gel Documentation, DNA Purification, PCR - Based analysis, DNA Finger Printing.

UNIT V 10

IMMUNOTECHNIQUES AND ANALYSIS OF BIOPROCESS

Radio Immuno Assay (RIA), Enzyme Linked Immunosorbent Assay (ELISA), Location of cells in tissues, Immunoblotting, Analysis of biomass, Measurement of dry weight and Biomass composting, Analysis of substrate uptake and product formation rates, Measurement of BOD and COD in waste waters, Gas analysis for O2 and CO2, Flow injection analysis.

Tutorial : 15

Total : 60 Hours

YEAR II	L	T	P	C
SEMESTER IV	3	1	0	4

INSTRUMENTAL METHODS OF ANALYSIS

AIM

To familiarize the students with various instruments that are applied in the field of Biotechnology.

OBJECTIVES

To study in detail about the

- o Flame photometry, turbidimetry and nephelometry.
- o Optical instruments.
- o Molecular spectroscopy.
- o Thermal and X - ray methods.

UNIT I 9

BASICS OF MEASUREMENTS AND SCATTERING OF RADIATION

Classification and calibration of instrumental methods, Rayleigh scattering, Scattering of gases, Atomization, Flame atomization, Turbidimetric and Nephelometric titrations.

UNIT II 9

OPTICAL METHODS

General design, Sources of radiation, Wavelength selectors, Sample containers, Radiation transducers, Types of optical instruments, Fourier transform measurements.

UNIT III 9

MOLECULAR SPECTROSCOPY

Measurement of transmittance and absorbance, Beer's law, Spectrophotometer analysis, Types of spectrometers, UV - Visible - IR- Raman spectroscopy - Instrumentation - theory, NMR spectroscopy, Auger electron spectroscopy and Atomic absorption spectroscopy.

UNIT IV 9

THERMAL METHODS

Thermo-gravimetric methods, Differential thermal analysis, Differential scanning calorimetry.

UNIT V 9

X-RAY METHODS

The absorption of X-rays, Monochromatic X-ray sources, X-ray detectors, X-ray diffraction, X-ray fluorescence.

Tutorial : 15

Total : 60 Hours

YEAR II	L	T	P	C
SEMESTER IV	3	1	0	4

UNIT OPERATIONS

AIM

To understand the basic concepts of Fluid mechanics, Heat Transfer and Mechanical operations

OBJECTIVES

To have an exposure about the

- Principles and Mechanism of Heat Transfer.
- Fundamentals of Convection and Radiation.
- Principles of Heat Exchanger Design.
- Basic concepts of Fluid Mechanics.
- The theory behind Mechanical Separation and Drying.

UNIT I 9

CONDUCTION

Modes of Heat Transfer - Heat conduction - Steady state conduction - Heat Conduction through composite wall, Hollow Sphere, Hollow cylinder, Combined Conduction- convection - Extended Surfaces, Critical Thickness of Insulation, individual and Overall Heat transfer Coefficient.

UNIT II 9

CONVECTION AND RADIATION

Convection - Dimensional Analysis - Forced Convection and Natural convection - Boiling and condestation, Concept of Radiation, Laws of Radiation, Grey & Black Bodies

UNIT III 9

HEAT EXCHANGER

Heat Exchanger - Types of Heat Exchangers - Types of Flows,

LMTD, Fouling Factor, NTU concept, Types of Evaporators - Calculation for Single and Multiple Effects.

UNIT IV FLUID MECHANICS 9

Introduction - Nature of Fluids, Properties of Fluids, Types of Fluids, Fluid Statics, Pressure measurement, Measurement of Fluid flow - Venturimeter, orifice meter, rotameter, Fluidization - Mechanism, types and its applications

UNIT V 9

DRYING AND MECHANICAL SEPARATION

Drying - Air properties - Drying Equipments - Drying Rates and Drying time. Classification of Mechanical Separation processes, Solid Liquid Separation - Filtration - Constant Pressure, Constant Volume, Batch and Continuous Filtration - Indus trial Filter, Centrifugal Separation, Settling and Sedimentation.

Tutorial : 15

Total : 60 Hours

SEMESTER IV	0	0	4	2

CELL AND MOLECULAR BIOLOGY LAB

AIM

The course aim is to offer hands on training in the area of Cell culture and cell identification. This will serve as a prerequisite for Post graduate and specialized studies and Research.

OBJECTIVES

o At the end of the course from various sources, the students would have learnt the methodology to isolate cells and to identify them by specialized Microscopy. This will be extremely beneficial to take up project work in Cellular biology.

o The student would have learnt basic techniques used in Molecular biology and its application. This will be strength for student to undertake research projects in the area of Molecular biology.

1. Introduction to principles of sterile techniques and cell propagation
2. Principles of Microscopy
3. Isolation of Cell organelle - Mitochondria, Microtubules, Actin and Myosin filaments
4. Cell Fractionation - Separation of peripheral blood mononuclear cells from blood
5. Cell staining - Gram's staining, Leishman staining
6. Cell counting - Tryphan blue assay, MTT Assay, Alamar blue assay
7. Osmosis and Tonicity
8. Staining for different stages of mitosis in Allium cepa (Onion)
9. Isolation of DNA - Isolation of plant cell, bacterial and animal cell genomic DNA
10. Quantification of RNA / DNA by physical and chemical method
11. Agarose gel electrophoresis

12. Formaldehyde gel electrophoresis of RNA
13. Plating of O phage
14. O phage lysis of liquid cultures.

REFERENCES

1. Sambrook et al., Molecular cloning - A laboratory manual.
2. Laboratory Manual

YEAR II	L	T	P	C
SEMESTER IV	0	0	4	2

INSTRUMENTAL ANALYSIS LAB

AIM

To make the students specialised in handling the various instruments of Biotechnological processes.

OBJECTIVES

o At the end of this course, the student would have learnt about the Spectroscopy, Nephelometry and Chromatography. This will be helpful in doing some specialised projects.

1. Validating Lambert - Beer's law using KMnO4.
2. Precision and Validity in an experiment using Absorption spectroscopy.
3. Finding the Stoichiometry of the Fe (1,10 Phenanthroline Complex) using Absorption spectroscopy.
4. Finding the pKa of 4 Nitrophenol using Absorption spectroscopy.
5. UV spectra of Nucleic Acid.
6. Estimation of Alizarin Aluminium complex, limits of detection.
7. Estimation of Al 3+ concentration using Alizarin in the spectrometer.
8. Estimation of Sulphate by Nephelometry.
9. Estimation of trace elements by Flame photometer.
10. Experiments on

a. pH Meter

b. Conductivity meter c. Turbidity meter.

11. Estimation of Dissolved oxygen.
12. Operating principles of IR spectrum of Hydrocarbons (Demo).
13. Operating principles of TGA, DSC and DTA (Demo).
14. Operating principles of NMR and ESR (Demo).

REFERENCES

1. Laboratory Manual.

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

BIOCHEMISTRY II

AIM

To study the metabolic pathways and its significance in Biochemistry. This will be a prerequisite for the courses offered in the subsequent semesters.

OBJECTIVES

At the end of the course, the students would have learnt about

o Carbohydrates and Lipids metabolism

o Amino acid and Nucleic acid metabolism.

o Bioenergetics.

o Photosynthesis

o Metabolic disorders.

UNIT I 9

CARBOHYDRATES AND LIPID METABOLISM

Carbohydrate metabolism - Glycolysis, TCA cycle, Gluconeogenesis, HMP shunt, Glycogenesis, Glycogenolysis. Lipid metabolism - Synthesis of fatty acids, Oxidation of fatty acids - ?, ?, ?, Ketogenesis, Cholesterol, Triglycerides, Phospholipids. Regulation of carbohydrates and lipid metabolism.

UNIT II 9

AMINO ACID AND NUCLEIC ACID METABOLISM

Nitrogen fixation, Urea cycle, Synthesis and degradation of Arginine, Serine, Glycine, Aromatic aminoacids (Phenylalanine, Tyrosine, Tryptophan), Histidine, Glutamate. Transamination, Deamination, Decarboxylation. Important molecules derived from amino acids (Auxins, DOPA, Serotonin, Porphyrins, T3, T4, Adrenaline, Nonadrenaline, Histamine, GABA, Polyamines, etc.) Biosynthesis

of nucleotides - De novo and salvage pathway, Degradation of nucleotides.

UNIT III 9

BIOENERGETICS AND OXIDATIVE METABOLISM

Thermodynamic relationships and high energy compounds, Electron transport chain - Components, Mechanism, Inhibitors, Oxidative phosphorylation - Site of reaction, ATP synthase, Mechanism, Inhibitors, Ionophores, Uncouplers.

UNIT IV 9

PHOTOSYNTHESIS

Photosynthetic apparatus, Photosynthetic pigments, Mechanism of light reaction and dark reaction, C3 , C4 and CAM pathways, Bacterial photosynthesis.

UNIT V 9

CLINICAL BIOCHEMISTRY

Glycogen storage diseases, Diabetes mellitus, Niemann Pick disease, Gaucher's disease, Fabrys disease, Tay-sach's disease, Atheroscelerosis. Alkaptonuria, Albinism, Phenylketonuria, Parkinson's disease, Cystinuria, Alzheimer's disease, Xanthinuria, Orotic acidiuria, Gout, Leasch-Nyhan syndrome, Nucleoside Phosphorylase deficiency.

Total : 45 Hours

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

IMMUNOLOGY

AIM

To introduce the science of immunology, to study various types of immune systems, their classification, structure, mechanism of immune activation and to develop the students skills in Immunotechnology.

OBJECTIVES

At the end of the course the students would have learnt about the following

- o The immune system, their structure and classification.
- o Antibody production and its genetic control.
- o Cellular immunology.
- o Transplantation and Autoimmunity.
- o Techniques in Immunology.

UNIT I 9

INTRODUCTION TO IMMUNE SYSTEM

Phylogeny of immune system, Innate and acquired immunity, Clonal nature of immune response, Organization and structure of lymphoid organs, Cells of immune system - Hematopoiesis and differentiation - B-Lymphocytes, T-Lymphocytes, Macrophages, Dendrite cells, Natural Killer, Lymphocyte activated killer cells, Eosinophils, Neutrophils, Mast cells.

UNIT II 8

ASSESSMENT OF CELL MEDIATED IMMUNITY

Identification of lymphocytes and their subsets in blood, T cell activation, Estimation of cytokines, Macrophages activation, Macrophage-microbicidal assays, Hypersensitivity, Immunosuppression.

UNIT III 9

TRANSPLANTATION AND AUTOIMMUNITY

HLA System, Transplantation - Organ transplantation, Grafting - graft rejection and prevention, Immunosuppressive drugs, Autoimmunity - Auto antibodies in human, Pathogenic mechanism, Experimental models of Autoimmune disease, Treatment of Autoimmune disorders.

UNIT IV 9

MOLECULAR IMMUNOLOGY

Immunity to virus, Bacteria, Parasites, Genetic control of immune response, MHC associated predisposition to disease, Infectious diseases - Leprosy, Tuberculosis, Malaria, Filariasis, Amoebiasis, Rabies, Typhoid, Hepatitis, AIDS, Principles and strategy for developing vaccines, Newer methods of vaccine production.

UNIT V 10

IMMUNOTECHNOLOGY

Antigen-antibody interaction, Agglutination and precipitation, Complement fixation test, Immunodiffusion, Radio Immuno Assay (RIA), Enzyme Linked Immunosorbent Assay (ELISA), Western blotting, Immunoelectrophoresis, SDS - PAGE, Purification and synthesis of antigen, Fluorescence immunoassay - Immuno Fluorescence (IF), SLFIA DELFIA, Fluorescence Activated Cell Sorter, Immunomics.

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

PROTEIN ENGINEERING

AIM

This course imparts advance knowledge on Proteins through a detailed study of Protein structure, Characteristic property and Significance in biological systems.

OBJECTIVES

o To gain an understating about molecular interactions in Protein structure

o To focus on the Primary, Secondary, Tertiary and Quaternary structure

o To gain knowledge about concepts and principles of Protein structure determination.

o To understand the relation between structure and functions of Proteins of particular importance.

o To learn about Protein design principles and Database analysis.

UNIT I 8

BONDS AND ENERGIES IN PROTEIN MAKEUP

Covalent and Non-covalent interactions in protein structure, Chemical reactivity in relation to post translational modifications and peptide synthesis

UNIT II 10

PROTEIN ARCHITECTURE

Primary structure, Secondary structures, Super secondary structures, Topology diagrams, Nucleotide binding folds, Prediction of substrate binding sites, Tertiary structures, Modular nature and Formation of complexes in Quaternary structures.

UNIT III 9

PROTEIN FOLDING AND STRUCTURE DETERMINATION

Protein Denaturation and Renaturation, Protein folding pathways, Stability of folded conformation of proteins, Methods to determine primary, tertiary and quaternary structure - Peptide mapping, Peptide sequencing, Circular dichroism, Mass spectroscopy, X-ray diffraction, Nuclear Magnetic Resonance and Infra Red Spectroscopy.

UNIT IV 10

PROTEIN STRUCTURE - FUNCTION RELATIONSHIP

Helix-turn-Helix motifs, Cro, Lamda and Trp repressor, Zn fingers, Tata Box binding proteins, Homeodomain, Leucine zippers, Membrane proteins, Bacteriorhodopsin and Photosynthetic reaction center, Enzymes: Serine proteases - understanding the catalytic design by engineering trypsin, chymotrypsin and elastase.

UNIT V 8

PROTEIN ENGINEERING AND PROTEIN DESIGN

Site directed mutagenesis, Examples of engineered proteins - T4 Lysozyme and Recombinant Insulin, Protein design - Principles and examples.

Total : 45 Hours

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

BIOETHICS, BIOSAFETY AND IPR

AIM

To create awareness in Biosafety and ethical issues in Biotechnological process.

OBJECTIVES

At the end of the course the students will have a thorough knowledge on

- o Bioethics and socioeconomic impacts.
- o Human ethical issues.
- o Ethical issues on GMOs.
- o Biosafety guidelines and management.
- o Patent system and IPR.

UNIT I 8

BIOTECHNOLOGY AND BIOETHICS

Definition and concepts : Bioethics and nature, Bioethics and gender bias, Theology, Bioethics and National and International legislation / Law, rDNA guidelines, The ethical issues on legal and socioeconomic impacts of biotechnology.

UNIT II 9

BIOETHICS AND HUMAN

Personhood, Bioethical issues in reproduction, Abortion, Population explosion and control, Assisted reproduction, AIDS, Egg donation, Prenatal screening and sex selection, Cloning, Ethical issues on life and death, Voluntary euthanasia and physician assisted suicide, Organ donation and transplantation.

UNIT III 9

BIOETHICS AND NEW GENETICS

Ethical issues on Genetically engineered organisms and Genetically modified foods, Ethical issues on new genetics - Human genome project, Gene therapy, Stem cell research, National resource allocations.

UNIT IV 9

INTRODUCTION TO BIOSAFTEY

Biosafety regulation and guidelines, Public acceptance issues for biotechnology - Case studies, Experimental protocol approvals, Levels of containment, Problems of biologically active biotechnology products, The Cartagena protocol on the biosafety and biosafety management.

UNIT V 10

PROTECTION OF BIOTECHNOLOGICAL INVENTIONS

Objectives of patent system, Basic principles and general requirements of patent law, Biotechnological inventions and patent law, Legal development, Patentable subjects and protection in biotechnology, The patentability of microorganisms, Intellectual Property Rights (IPR) and World Trade Organization (WTO) regime, Consumer protection and IPR, IPR and Plant genetic resources, Plant Breeders Right, IPP, WIPO, GAAT, TRIPs.

Total : 45 Hours

YEAR III	L	T	P	C
SEMESTER V	3	1	0	4

CHEMICAL AND BIOLOGICAL THERMODYNAMICS

AIM

To understand the basic concepts of Thermodynamics, Phase equilibria and Chemical equilibria.

OBJECTIVES

To understand the

- Laws of Thermodynamics and its applications
- Thermodynamic and volumetric properties of pure fluids.
- Properties of Solutions.
- Concepts of Phase equilibrium.
- Principle of Chemical reaction equilibrium.

UNIT I 11

LAWS OF THERMODYNAMICS AND ITS APPLICATIONS

Introduction - Work, Energy, Heat, Internal energy, Extensive and intensive properties, State and path functions, First law of thermodynamics, Energy balance for closed systems, Equilibrium, The reversible process, Constant - v and Constant - p processes, Enthalpy, Heat capacity, Application of First law to Steady state flow processes, Entropy and Second law of thermodynamics - Limitations of First law, Third law of Thermodynamics. Heat engines, Thermodynamic temperature scale, Power cycles, Calculation of Ideal work, Lique faction.

UNIT II 13

VOLUMETRIC AND THERMODYNAMIC PROPERTIES OF FLUIDS

Ideal gas law, Isobaric, Isochoric, Isothermal, Adiabatic and Polytropic process. P-V-T relations of fluid, Equation of state for gases, Compressibility factors, Compressibility charts, The prin-

ciples of corresponding states, Acentric factor. Thermodynamic properties of fluids - Reference properties, Energy properties, Derived properties, Maxwell's relations. Heat capacity relations, Effect of pressure and volume on heat capacities.

UNIT III 12

SOLUTION THERMODYNAMICS

Partial molar properties, Concepts of chemical potential and fugacity; Activity and activity co-efficient, Gibbs Duhem equation, Ideal and non-ideal solut ions, Excess properties of mixtures, Composition models.

UNIT IV 13

PHASE EQUILIBRIA

Phase equilibrium - Criteria for phase equlilbria, Phase equilibria in single and multi component systems, Vapour Liquid Equilibria (VLE), Liquid - Liquid Equilibria (LLE), Solid - Liquid Equilibrium.

UNIT V 11

CHEMICAL REACTION EQUILIBRIA

Equilibrium criteria for homogeneous chemical reactions, Evaluation of equilibrium constant, Effect of temperature and pressure on equilibrium constant, Calculation of equilibrium conversion for single and multiple reactions, Heterogeneous reaction equilibria.

Tutorial : 15

Total : 60 Hours

YEAR III	L	T	P	C
SEMESTER V	0	0	4	2

BIOCHEMISTRY II

AIM

To develop the skills of the students by providing hands on training in various Biochemical inve stigations.

OBJECTIVES

At the end of this laboratory course, the student would have learnt about the Qualitative analysis, Biochemical investigations, Thin Layer Chromatography.

1. Guidelines for using bio chemistry lab (Theory)
2. Concentration measurements and their range in biological measurements.

Demonstration of proper use of volume and weight measurement devices.

3. Accuracy, Precision, Sensitivity and Specificity (Theory)
4. Qualitative test for carbohydrates - Distinguishing reducing from non - reducing sugars and keto from aldo sugars.
5. Qualitative test for Amino acids.
6. Estimation of Glucose by O-toludine method
7. Quantitative method for Amino acid estimation using Ninhydrin - Distinguishing amino from imino acid.
8. Protein estimation by Biuret, Lowry's, Bradford methods.
9. Extraction of Lipids and analysis by TLC.
10. Estimation of Nucleic acids by absorbance at 260 nm and hyper chromic effect (Demo)
11. Estimation of Haemoglobin.
12. Enzymatic assay : Phosphatase from Potato.

REFERENCES

1. Laboratory Manual.

YEAR III	L	T	P	C
SEMESTER V	0	0	4	2

IMMUNOLOGY LAB

To develop skills of students in Immunology by performing simple experiments in the laboratory.

OBJECTIVES

o At the end of the course the student would have gained knowledge to perform techniques like blood grouping, ELISA and identification of T-cell, Immunofluorescence etc. This will be of help in facilitating the students for project work.

1. Handling of animals, immunization and raising antisera.
2. Identification of cells in a blood smear.
3. Identification of blood groups.
4. Immunodiffusion and immunoelectrophoresis.
5. Testing for Typhoid antigens by Widal test.
6. Enzyme Linked Immuno Sorbent Assay (ELISA).
7. Isolation of pheripheral blood mononuclear cells.
8. Isolation of monocytes from blood.
9. Immunofluorescence.
10. Identification of T-cell rossetting using sheep RBC.

REFERENCES

1. Laboratory Manual.

YEAR III	L	T	P	C
SEMESTER VI	3	0	0	3

GENETIC ENGINEERING

To understand the scope of Genetic engineering and its potential impact on virtually all areas of Biology.

OBJECTIVES

To impart advanced technological knowledge through a detailed study on

- o The basic concepts and tools of Genetic engineering.
- o Cloning vehicles.
- o Cloning strategies
- o Construction of libraries and gene mapping.
- o Gene modifications and applications of recombinant rDNA Technology.

UNIT I 9

BASIC TOOLS IN GENETIC ENGINEERING

Core techniques in gene manipulations - Cutting and joining of DNA and vectors, DNA labelling - Radioactive and non-radioactive methods, Gene specific and degenerate primer design, DNA amplification using PCR and it's applications, RAPD, RT-PCR, DNA sequencing - Maxam and Gilbert method and Sanger and Coulson enzymatic chain termination method, Nucleic acid hybridization - Southern, Northern and Western.

UNIT II 9

CLONING AND EXPRESSION VECTORS

Plasmid biology, Plasmids as vectors - pBR 322, Derivatives of pBR 322, pUC vectors, Lambda vectors, In vitro packaging, M13 vectors, Cosmids, Phasmids, Retroviral vectors, Baculovirus vectors, Cloning vectors in Gram positive bacteria (p1J101), Cloning vectors in Gram negative bacterium (Col E1, R1, pT181,

pSC 101), Expression vectors - Prokaryotic expression vectors (E. coli, Streptomyces) and Eukaryotic expression vectors.

UNIT III 9

CLONING STRATEGIES

Construction of recombinant DNA, Preparation of competent cells, Transformation, Transfection, Selection and screening of recombinants, Cloning in plants, Ti Plasmids of Agrobacterium, Structure and function of T-DNA, Gene transfer - Shotgun method, Nuclear injection method.

UNIT IV 9

GENE LIBRARIES AND GENE MAPPING

Construction and screening of Genomic DNA and cDNA Library, Analysis of gene expression, Chromosome walking, Chromosome jumping, DNA probes, Molecular markers - Variable Nucleotide Tandem Repeats (VNTR's), Minisatellite sequences, Short Tandem Repeats (STR), Microsatellite sequences, Restriction mapping, Transcript mapping, Gene targetting, Transposon tagging.

UNIT V 9

GENE MODIFICATIONS AND APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY

Mutagenesis - Deletion mutagenesis, Oligonucleotide derived mutagenesis, Site directed mutagenesis and their applications, DNA Fingerprinting - RFLP analysis, Applications of recombinant DNA technology for the production of recombinant proteins - Insulin, Interferon and Growth hormones, Biodegradable plastics, Diagnostics, Pathogenesis, Genetic diversity, Therapeutic vaccines, Transgenic plants and animals, Safety lines for recombinant DNA techniques and guidelines for the disposal of Bio-waste.

YEARIII	L	T	P	C
SEMESTER VI	3	0	0	3

PLANT AND ANIMAL BIOTECHNOLOGY

AIM

To offer a focussed study on the important aspects of Biotechnology in plant and animal sciences.

OBJECTIVES

To expose the students to the concepts of

- Media preparation and tissue culture techniques.
- Vectors and transgenic plants.
- Molecular markers and mapping.
- Gene cloning techniques and its importance.
- Transplantation and stem cell technology.

UNIT I 10

PLANT CELL AND TISSUE CULTURE

Tissue culture media - Composition and preparation, Tissue culture as a technique to produce novel plants and hybrids, Organogenesis, Somatic embryogenesis, Shoot-tip culture, Embryo culture and embryo rescue, Protoplast isolation, Culture and fusion, Selection of somatic hybrids, Cybrids, Cryopreservation, DNA banking for germplasm conservation.

UNIT II 8

PLANT VECTORS AND BIOLOGICAL NITROGEN FIXATION

Plant viruses - Classification, Types of plant vectors - Agrobacterium mediated gene transfer, Applications, Legume symbiosis, Nitrogen fixation, Regulation of nif and nod gene.

UNIT III 9

MOLECULAR MARKERS AND MAPPING TECHNIQUES

Molecular markers - aided breeding, RFLP maps, STS, Micro satellites, SCAR (Sequence Characterized Amplified Regions), SSCP (Single Strand Conformational Polymorphism), AFLP, QTL map based cloning, Molecular markers assisted selection.

UNIT IV 10

TRANSGENIC ANIMALS AND DISEASE DIAGNOSIS

Basic techniques of animal cell culture and their application, Gene cloning techniques for mammalian cells, Transgenic animals, In-vitro fertilization and embryo transfer, Molecular biological technique for rapid diagnosis of genetic disease and gene therapy.

UNIT V 8

TRANSFECTION METHODS AND STEM CELL TECHNOLOGY

Gene transfer methods in animals, Xenotransplantation, Regulation of transgenic animals, Patenting genetically engineered animals, Stem cell technology.

YEARIII	L	T	P	C
SEMESTER VI	3	0	0	3

PRINCIPLES OF BIOINFORMATICS

AIM

This course aims to develop the skills of the students in Bioinformatics. This will facilitate the students to undertake projects in the Modern biology.

OBJECTIVES

- o Basics of Bioinformatics.
- o Sequence Data bases and their uses.
- o Introduction to Sequence alignment.
- o Evolutionary Tree and Phylogeny.
- o Applications of Bioinformatics.

UNIT I 8

INTRODUCTION TO BIOINFORMATICS

Introduction, Scope of bioinformatics - Introduction to UNIX- Files and processes, Basic UNIX commands for listing files and directories, Making directories, Changing to a different directory, Copying and moving files, Removing files in directories, Clear, CAT and Less commands, Word count, Help, Redirection, Access rights, Running background process and killing processes, ftp, telnet, Internet, http, Search engines.

UNIT II 9

DATABASES

Introduction to databases - Flat files, Relational databases, Object oriented databases and hypertext databases, Biological databases and their uses, Introduction to EMB net and NCBI, Classification of biological databases; Primary nucleic acid sequence databases - Gen Bank, EMBL, DDBJ; Primary protein sequence databases - PIR, SWISS-PROT; Composite databases - NRDB,

OWL, SWISS-PROT+TrEMBL; Secondary databases - PROSITE, PRINTS; Structural databases - PDB, MMDB.

UNIT III 10

SEQUENCE ALIGNMENT

Introduction to sequence alignment and its significance, Types - Global, Local, Pairwise and Multiple alignment. DOT PLOTS, Scoring matrices - PAM, BLOSSUM. Dynamic programming algorithms, BLAST, FASTA. Multiple sequence alignment by PSI- BLAST.

UNIT IV 9

PHYLOGENETIC ANALYSIS

Terminology and basics of Phylogenetics - Clades, Taxons, Baranches, Nodes; Orthologs and Paralogs. Steps to construct a Phylogenetic tree - Constructing a Multiple Sequence Alignment, Determining the substitution model, Tree building and tree evaluation.

UNIT V 9

APPLICATION OF BIOINFORMATICS

Application of bioinformatics in various fields - Medicine, Agriculture and Industries.

Total : 45 Hours

TEXT BOOKS

1. Rastogi, S.C., Namita Mendiratta, Parag Rastogi. Bioinformatics - Concepts, Skills, Application.

2. Westhead, D.R., Parish, J.H., Twyman, R.M., 2000. Instant Notes in Bioinformatics. BIOS Scientific Publishers.

6. Baldi, P. and Brunak, S., 1998. Bioinformatics : A Machine Learning Approach. MIT Press.

YEAR III		L	T	P	C
SEMESTER	VI	3	0	0	3

BIOPROCESS ENGINEERING

AIM

This course aim to develop the skills of the students in the area of Bioprocess engineering. This will also help the students to undertake project in Bioprocess technology.

OBJECTIVES

o To study the historical development of Bioprocess technology, Design and construction of Fermenters.

o To study the kinetics of Microbial growth and product formation.

o To strengthen the knowledge on Design and operation of Bioreactors.

o To study the Mass transfer principles in bioreactor and scale-up criterias.

o Methods of Online and Offline monitoring of bioprocess.

UNIT I 12

INTRODUCTION TO BIOPROCESS AND FERMENTATION

Historical development of the fermentation industry, Outline of an integrated bioprocess and the various (Upstream, Downstream) unit operations involved in bioprocess, General requirements of fermentation process, Basic configuration of fermenter and ancillaries, Main parameters to be monitored and controlled in fermentation processes.

UNIT II 13

KINETICS OF MICROBIAL GROWTH AND PRODUCT FORMATION

Kinetics of Batch, Fed batch and Continuous culture processes,

Comparison of batch and continuous culture in industrial process, Introduction to structured and unstructured models - Using unstructured non-segregated models to predict specific growth rate - Substrate limited growth (Monod equation and alternatives to Monod equation), Models with growth inhibitors (Substrate, Product inhibition and Inhibition by toxic compounds : The logistic equa tion).

UNIT III 12

DESIGN OF BIOREACTORS

Classification of bioreactors - Immobilized enzyme bioreactors, Packed bed bioreactors, Membrane bioreactors, Airlift loop reactor, Fluidized bed and Trickle bed bioreactors, Design of bioreactors - Aseptic operation and containment, Body construction, Aeration and agitation Types of agitators and spargers, Sterilization of Media, Fermenter, Air supply and Exhaust.

UNIT IV 11

BIOREACTOR SCALE-UP AND MASS TRANSFER

Scale up of fermentation process - Factors involved in scale-up, Scale-up of aeration / agitation, Regimes in stirred tank reactors, Scale-up of Airlift reactors, Oxygen mass transfer in bioreactors, Determination of KLa values - Sulphite oxidation technique, Gassing out technique, Oxygen balance technique, Mass transfer correlations.

UNIT V 12

MONITORING OF BIOPROCESSES

Methods of measuring process variables - Online and offline analysis for measurement of important physico-chemical and biochemical parameters, Biomass estimation, Control systems - Manual and automatic control.

Tutorial : 15

Total : 60 Hours

TEXT BOOKS

1. Shuler and Kargi, 1992. Bioprocess Engineering. Prentice Hall.

2. James E. Bailey and David F. Ollis, 1986. Biochemical Engineering Fundamental. 2nd Edn. Mc Graw Hill.

6. Pauline M. Doran, 2002. Bioprocess Engineering Principles. Academic Press.

YEAR III		L	T	P	C
SEMESTER	VI	3	1	0	4

MASS TRANSFER OPERATIONS

AIM

To develop the skills of the students in the area of Mass transfer operations in Biotechnological process.

OBJECTIVES

- To introduce the Mass transfer principles.
- To study in detail about the Principles of absorption.
- To study the Vapour - Liquid Equilibrium.
- To understand the concept of Liquid - Liquid Equilibrium.
- To study the concept of Solid - Fluid operation.

UNIT I 11

DIFFUSION

Molecular diffusion in fluids, Mass transfer coefficients, Diffusion in solids, Inter phase mass transfer.

UNIT II 13

GAS - LIQUID OPERATION

Equipment for gas liquid operation, Principles of gas absorption, Equilibrium solubility of gases in liquid, One component transfer material balance, Counter current multistage operation, Continuous contact equipment, Multi component system, Absorption with chemical reaction.

UNIT III 13

DISTILLATION

Vapour - Liquid Equilibria, Single stage- Flash vapourization, Differential or simple distillation, Continuous rectification - Binary system, Multistage tray towers - Mc Cabe- Thiele and Ponchon Savarit principles.

UNIT IV 13

LIQUID - LIQUID EXTRACTION

Liquid - Liquid Equilibria, Stage wise contact, Stage type extractor, Differential extractor

UNIT V 13

SOLID - FLUID OPERATION

Adsorption equilibria - Liquids, Single gases and vapours, Leaching - Unsteady state operation, Steady state continuous operation.

Tutorial : 15

Total : 60 Hours

TEXT BOOKS

1. Treybal, R.E., 1981. Mass Transfer Operations. 3rd Edn., Mc Graw Hill.

2. Geankoplis, C.J., 2002. Transport Processes and Unit Operations. 3rd Edn., Prentice Hall of India.

5. Butterworth - Heinemann, 1992. Bioprocess Technology : Modeling and Transport Phenomena.

YEAR III	L	T	P	C
SEMESTER VI	0	0	4	2

GENETIC ENGINEERING LAB

To understand and develop the skills involved in rDNA Technology

OBJECTIVES

o To familiarize with core Nucleic acid techniques such as extraction and nucleic acid separations.

o To amplify DNA using Polymerase Chain Reaction.

o To detect and characterize Nucleic acids, through the application of gene probes and blotting techniques.

o To acquire skills in Gene cloning and screening of recombinants.

o To analyze proteins through SDS-PAGE and Western blotting.

1. Isolation of Genomic DNA from Plant / Animal / Bacterial Cells.
2. Isolation of Total RNA.
3. Isolation of Plasmid DNA.
4. Quantification of DNA and RNA.
5. Gel Electrophoresis of DNA - Agarose Gel, Polyacrylamide gel.
6. Southern Blotting.
7. Polymerase Chain Reaction.
8. Elut ion of Plasmid DNA from Agarose gel.
9. Restriction digestion of Bacterial Genomic and Plasmid DNA.
10. Ligation of DNA.
11. Preparation of Competent Cells.
12. Transformation in E. Coli.
13. Screening of Recombinants and Confirmation of Insert DNA in Plasmid.
14. SDS-PAGE.
15. Western Blotting.

REFERENCES

1. Laboratory Manual.

YEAR III	L	T	P	C
SEMESTER VI	0	0	4	2

BIOPROCESS ENGINEERING LAB

To provide hands on training by design of simple experiments to learn Bioprocess technology. It also provides an opportunity to experimentally verify the theoretical concepts studied.

OBJECTIVES

o To identify the Growth factors.

o To evaluate Enzyme activity.

o To carry out Enzyme Immobilized Reaction.

o To develop the skills of large scale production of Secondary metabolites.

o To study the Batch and Continuous culture growth.

1. Growth of micro organism - Estimation of Monod parameters.
2. Medium optimization - Plackett Burman design.
3. Enzyme activity - Effect of temperature and pH.
4. Enzyme Immobilization - Gel Entrapment.
5. Enzyme Immobilisation - Cross linking.
6. a. Production of Secondary metabolite by Plant cells in a Photo bioreactor.

b. Production of secondary metabolites in synthetic and complex industrial media.

7. Production of Wine by Yeast.
8. Production of Amino acid.
9. Study of Rheology of Fermentation broth and Power determination.

REFERENCES

1. Laboratory Manual.

YEAR IV		L	T	P	C
SEMESTER	VII	3	0	0	3

GENOMICS AND PROTEOMICS

AIM

To develop advance level skills in the areas of Genomics and Proteomics.

OBJECTIVES

To emphasize the concepts of

- o Genome organisation.
- o Mapping techniques.
- o Micro array techniques.
- o 2DE and Mass spectrometry.
- o Application of Proteomics.

UNIT I 8

OVERVIEW OF GENOMES OF PROKARYOTES, EUKARYOTES AND HUMAN

Organisation of genes, Coding and non-coding chromosomes and high order structures, Genome relatedness, Introduction of genomics.

UNIT II 9

MAPPING TECHNIQUES

Mapping strategies, Maps - Physical and Genetic maps, Comparative map, Integrated map, Top down and bottom up approach, linking and jumping of clones, STS maps, Human Genome Project.

UNIT III 9

FUNCTIONAL GENOMICS

Gene identification and prediction, Annotation, Functional prediction, Gene expression and micro arrays, Substractive DNA

library screening, differential display and representational difference analysis, SAGE.

UNIT IV 10

PROTEOMIC TOOLS

Edman protein microsequencing, Proteome analysis, 2D gel electrophoresis, Metabolic labeling, Detection of protein on SDS gels. Mass spectrometry - MALDI - TOF, Tandem MS - MS, Peptide mass finger printing.

UNIT V 9

PROTEIN PROFILING AND APPLICATION OF PROTEOMICS

Protein - protein interaction, Post translational modification, Proteomics in drug discovery.

Total : 45 Hours

SEMESTER	VII	3	0	0	3

BIOPHARMACEUTICAL TECHNOLOGY

AIM

To make the students understand about various concepts involved in the development of drugs and its manufacture as Biopharmaceuticals.

OBJECTIVES

To impart knowledge on

- Drugs and Therapeutic agents.
- Drug action and metabolism.
- Process of manufacturing drugs.
- Preparation, Preservation and Quality testing of drugs.
- Biopharmaceuticals.

UNIT I 9

INTRODUCTION

Development of Drug and Pharmaceutical industry, Types of therapeutic agents and their uses, Economics and regulatory aspects.

UNIT II 9

DRUG METABOLISM AND PHARMACOKINETICS

Physico-chemical principles of Drug metabolism, Radioactivity, Pharmacokinetics - different mechanisms of Drug action.

UNIT III 8

UNIT PROCESSES AND THEIR APPLICATIONS

Bulk drug manufactures, Types of reactions in Bulk drug manufacture and Processes, Special requirements for Bulk Drug Manufacture and its regulatory aspects.

UNIT IV 10

PRODUCT FORMS AND DEVELOPMENT

Tablets - Compression, Granulation, Presses, Coating, Dosage forms, Topical applications, Preservation of Drugs, Analytical methods and test for various drugs and pharmaceuticals, Packing and Labeling, Quality management, GMP.

UNIT V 9

BIOPHARMACEUTICALS

Therapeutics - Vitamins, Laxatives, Analgesics, Contraceptives, Antibiotics, Hormones

SEMESTER VII	3	1	0	4

DOWNSTREAM PROCESSING IN BIOTECHNOLOGY

AIM

To develop the skills of the students in the various aspects of Downstream processing.

OBJECTIVES

To impart knowledge on

- Role of Downstream processing in Biotechnology.
- Physical methods of separation.
- Isolation of products.
- Product fractionation and purification.
- Formulation of the final product and finishing.

UNIT I 10

ROLE OF DOWNSTREAM PROCESSING IN BIOTECHNOLOGY

Role and importance of Downstream processing in biotechnological processes, Characteristic of biomolecules and bioprocesses, Cell disruption for product release - Mechanical, Enzymatic and Chemical methods. Pre-treatment and stabilization of bioproducts.

UNIT II 8

PHYSICAL METHODS OF SEPARATION

Unit operation for solid liquid separation - Removal of insolubles, Biomass (and particular debris), Flocculation and sedimentation, Centrifugation and filtration methods.

UNIT III 9

ISOLATION OF PRODUCTS

Adsorption, Liquid - Liquid extraction, Aqueous two phase

extraction, Membrane separation - Ultra filtration and Reverse osmosis, Dialysis, Precipitation of proteins by different methods.

UNIT IV 10

PRODUCT FRACTIONATION / PURIFICATION

Chromatography - Principles, Instrumentation, Adsorption, Reverse phase, Ion exchange, Hydrophobic interaction, Bioaffinity and pseudo affinity chromatographic techniques, Hybrid separation technology - Membrane chromatography, Electrochromatography, High Performance Liquid Chromatography (HPLC).

UNIT V 8

FINAL PRODUCT FORMULATION AND FINISHING OPERATION

Crystallization - Basic concepts, Crystal size distribution, Batch crystallisation, Recrystallisation, Drying - Drying equipment - Conduction dryers, Adiabatic dryers, Drying rate and drying time, Lyophilisation in final product formulation.

Tutorial : 15

Total : 60 Hours

SEMESTER	VII	3	0	2	4

NANOBIOTECHNOLOGY

AIM

To introduce the concepts of Nanotechnology and to understand its applications in Biotechnology.

OBJECTIVES

To study about

- o The basic concepts of Nanotechnology.
- o Fabrication and Characterisation of nanomaterials.
- o Nanoparticles in biosystems.
- o Role of microbes in Nanotechnology.
- o Applications of Nanobiotechnology.

UNIT I INTRODUCTION 9

Introduction, Overview of nanodevices and techniques, Inorganic nanoscale systems for biosystems - Nanostructured materials - Fullerness : Properties and characterization - Carbon nanotubes : Characterisation and application - Quantum dots and wires - Gold Nanoparticles - Nanopores.

UNIT II 8

FABRICATION AND CHARACTERISATION

Fabrication- Bottom-up Vs. Top-down, Epitaxial growth, Self assembly. Characterisation - X-Ray Diffraction (XRD), Transmission Electron Microscopy (TEM), Scanning Electron Microscopy (SEM), Scanning Tunnelling Microscopy (STM), Atomic Force Microscopy (AFM).

UNIT III 10

NANOMOLECULES IN BIOSYSTEMS

DNA, RNA, Proteins and Lipids - Nanoscale elements for delivery of materials into cells, Nanotechnology in cell - Cell motility : Nanomotors and cellular navigation - Chemotaxis - Transmembrane signalling and related proteins.

UNIT IV 9

MICRO ORGANISMS AND NANOBIOTECHNOLOGY

Nanobiotechnology and micro organisms-Polyhydrox yalkanoates (PHA) - Cyanophycin inclusions - Magnetosomes - Alginates - Bacteriophages - Bacterial spores - Bacterial protein complexes - s-layer proteins - Bacteriorhodopsin.

UNIT V 9

APPLICATIONS OF NANOBIOTECHNOLOGY

Nanomedicine, Nanobiosensor-Electrochemical DNA sensors, Nanobiochips, Nanocrystals in Biological Detection, Small scale systems for in vivo drug delivery, Nanotechnology for diagnosis and treatment (Cancer, Tuberculosis and Leprosy), Commercializing Nanobiotechnology.

Tutorial : 15

Total : 60 Hours

SEMESTER	VII	3	1	0	4

CHEMICAL REACTION ENGINEERING

AIM

To make the students understand the underlying concepts of reaction kinetics, ideal and non-ideal reactors, a basis for Bioreactors

OBJECTIVES

To impart knowledge on

- o Chemical Kinetics
- o Ideal Reactors
- o Single and Multiple Reactions
- o Non-ideal Reactors
- o Heterogeneous Reactions

UNIT I 9

CHEMICAL KINETICS

Introduction to chemical kinetics, rate equation, concentration dependent term of a rate equation: single and multiple reaction. Elementary and non- elementary reactions. Molecularity and order, theories of reaction rate and temperature dependency.

UNIT II 9

IDEAL REACTORS

Batch Reactor - Constant Volume, Variable volume batch reactor - Batch Reactor data for typical reactions - integral and differential method of analysis. Perfomance Equations for Single Batch reactor, Ideal CSTR, Ideal PFR

UNIT III 9

SINGLE AND MULTIPLE REACTIONS

Design for single reaction: size comparison of single reactors,

multiple reactor system, pfr in series/parallel, equal size mfr in series, Recycle reactor, introduction to multiple reactions, qualitative analysis of product distribution.

UNIT IV 9

NON-IDEAL REACTORS

Residence time distribution as a factor performance, residence time function and relationship between them in reactor, basic models for non ideal reactor like dispersion model, tanks in series model.

UNIT V 9

HETEROGENEOUS REACTIONS

Fluid particle reactions: selection of a model, unreacted core models for spherical particles, determination of the rate controlling step. Catalyst preparation, surface area and pore volume measurements: promoters, poisons.

Tutorial : 15

Total : 60 Hours

YEAR IV		L	T	P	C
SEMESTER	VII	3	0	0	3

TOTAL QUALITY MANAGEMENT

AIM

To introduce the concepts of Quality, TQM, Statistical process control and management.

OBJECTIVES

To familiarize about

- o Quality concepts.
- o TQM principles.
- o Statistical process control.
- o TQM tools.
- o Quality systems.

UNIT I 10

INTRODUCTION

Definition of quality - Dimensions of quality - Quality planning - Quality costs - Analysis techniques for quality costs - Basic concepts of Total Quality Management - Historical review - Principles of TQM - Leadership - Concepts - Role of senior management - Quality council - Quality statements -- Strategic planning - Deming philosophy - Barriers to TQM implementation.

UNIT II 10

TQM PRINCIPLES

Customer satisfaction - Customer perception of quality - Customer complaints - Service quality - Customer retention - Employee involvement - Motivation - Empowerment - Teams - Recognition and Reward - Performance appraisal - Benefits - Continuous process improvement - Juran trilogy - PDSA cycle - 5S - Kaizen - Basic concepts - Strategy - Performance measures.

UNIT III 8

STATISTICAL PROCESS CONTROL (SPC)

The seven tools of quality - Statistical fundamentals - Measures of central tendency and Dispersion - Population and Sample - Normal curve - Control charts for variables and attributes - Process capability - Concept of six sigma - New seven management tools.

UNIT IV 9

TQM TOOLS

Benchmarking - Reasons to benchmark - Benchmarking process - Quality Function Deployment (QFD) - House of quality - QFD process - Benefits - Taguchi quality loss function - Total Productive Maintenance (TPM) - Concept - Improvement needs - FMEA - Stages of FMEA.

UNIT V 8

QUALITY SYSTEMS

Need for ISO 9000 and other quality systems - ISO 9000 : 2000 Quality system - Elements - Implementation of qua lity system - Documentation - Quality auditing - QS 9000 - ISO 14000 - Concept - Requirements and benefits.

SEMESTER VII	0	0	4	2

DOWNSTREAM PROCESSING LAB

AIM

To develop hands on training in the various techniques used in Downstream Processing.

OBJECTIVES

o At the end of this course, the student would have learnt about techniques like Solid-liquid separation, Cell disruption, High resolution purification, Product polishing. These experiments will enable the students to have a deeper understanding about the techniques.

1. Solid-Liquid Separation - Centrifugation, Micro filtration.
2. Cell Disruption Techniques - Ultra sonication, French Pressure Cell.
3. Cell Disruption Techniques - Dyno Mill - Batch and Continuous.
4. Precipitation - Ammonium Sulphite Precipitation.
5. Ultra Filtration Separation.
6. Aqueous Two Phase Extraction of Biologicals.
7. High Resolut ion Pur ification - Affinity Chromatography.
8. High Resolut ion Pur ification - Ion Exchange Chromatography.
9. Product Polishing - Gel Filtration Chromatography.
10. Product Polishing - Spray Drying, Freeze Drying.

REFERENCES

1. Laboratory Manual.

YEAR IV	L	T	P	C
SEMESTER VIII	0	0	12	6

PROJECT WORK & VIVA VOCE

OBJECTIVE

♦ The objective of the project work is to enable the students to form the groups of not more than 3 members on a project involving theoretical and experimental studies related to the branch of study.

♦ Formation of Group as follows

♦ Group A : 8.5CGPA and above

♦ Group B : 7 to 8.49 CGPA

♦ Group C : 5 to 6.9 CGPA

Group A Student will have a choice to take 2 students from Group B&C

♦ Every project work shall have a guide who is the member of the faculty of the institution. Six periods per week shall be allotted in the time table and this time shall be utilized by the students to receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and also to present in periodical seminars on the progress made in the project.

♦ The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design and manufacture of a device, a research investigation, a computer or management project or a design problem.

♦ The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department.

♦ Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion.

♦ This final report shall be typewritten form as specified in the guidelines.

♦ The continuous assessment shall be made as prescribed in the regulations

♦ Every Student is expected to publish their research findings in a Journal/Conference proceedings. The Evidence of sending/ publishing to be produced at the time of submitting their project report

IMMUNOTECHNOLOGY

AIM

To provide an in-depth understanding of the techniques and the concepts in immunotechnology.

OBJECTIVES

To emphasize the concepts of

- o Antigens, Antibodies and Immunodiagnosis.
- o Assessment of Cell Mediated Immunity.
- o Immunopathology.
- o Molecular Immunology.
- o Recent Trends in Immunology.

UNIT I 10

ANTIGENS, ANTIBODIES AND IMMUNODIAGNOSIS

Types of antigens, Structure, Preparation of antigens for raising antibodies, Handling of animals, Adjuvants and their mode of action. Monoclonal and polyclonal antibodies - Their production and characterization, Western blot analysis, Immuno electrophoresis, SDS-PAGE, Purification and synthesis of antigens, ELISA - Principle and applications, Radio Immuno Assay (RIA) - Principles and applications, Non isotopic methods of detection of antigens - Enhanced chemiluminescence assay.

UNIT II 9

ASSESSMENT OF CELL MEDIATED IMMUNITY

Identification of lymphocytes and their subsets in blood, T cell activation parameters, Estimation of cytokines, Macrophage activation, Macrophage microbicidal assays, In vitro experimentation - Application of the above technology to understand the pathogenesis of infectious diseases.

UNIT III 9

IMMUNOPATHOLOGY

Preparation of storage of tissue, Identification of various cell types and antigens in tissues, Isolation and characterization of cell types from inflammatory sites and infected tissues, Functional studies on isolated cells, Immuno cytochemistry - Immuno fluorescence, Immuno enzymatic and immuno ferritin techniques, Immuno electron microscopy.

UNIT IV 9

MOLECULAR IMMUNOLOGY

Preparation of vaccines, Application of recombinant DNA technology for the study of the immune system, Production of antidiotypic antibodies, Catalytic antibodies, Application of PCR technology to produce antibodies and other immunological reagents, Immunotherapy with genetically engineered antibodies.

UNIT V 8

CURRENT TOPICS IN IMMUNOLOGY

Trends in immunology of infectious diseases and tumors, Topics as identified from time to time.

Total : 45 Hours

CANCER BIOLOGY

AIM

To impart a detailed knowledge in the area of Cancer biology.

OBJECTIVES

To expose and make the students understand the concepts of

- o Basics in cancer biology.
- o Mechanism of carcinogenesis.
- o Oncogenes.
- o Pathogenesis of cancer.
- o Therapeutics of cancer.

UNIT I 9

FUNDAMENTALS OF CANCER BIOLOGY

Cell cycle and check points, Cancer mechanism, Receptors, Signal molecules, Signal transduction - Modulation study, Tumour suppressor gene, Different forms of cancers, Diet and cancer. Detection using biochemical assays, Tumor markers, Molecular tools for early diagnosis of cancer.

UNIT II 9

PRINCIPLES OF CARCINOGENESIS

Theory of carcinogenesis, Chemical carcinogenesis, Metabolism of carcinogenesis, Principles of physical carcinogenesis - X- ray radiation, Mechanism of radiation carcinogenesis.

UNIT III 9

PRINCIPLES OF MOLECULAR CELL BIOLOGY OF CANCER

Signal targets and cancer, Activation of kinases, Oncogenes, Identification of Oncogenes, Retroviruses and oncogenes, Detection of oncogenes. Oncogenes / Proto oncogene activity. Growth factors related to transformation. Telomerases.

UNIT IV 9

PRINCIPLES OF CANCER METASTASIS

Clinical significances of invasion, Heterogeneity of metastatic phenotype, Metastatic cascade, Basement membrane disruption, Three step theory of invasion, Proteinases and tumour cell invasion, Angiogenesis.

UNIT V 9

NEW MOLECULES FOR CANCER THERAPY

Different forms of therapy, Chemotherapy, Radiation therapy, Detection of cancers, Prediction of aggressiveness of cancer, Advances in cancer detection, Use of signal targets towards therapy of cancer, Gene therapy.

Total : 45 Hours

MOLECULAR PATHOGENESIS

AIM

To widen the students knowledge in the area of Molecular pathogenesis.

OBJECTIVES

To make the students understand about the concepts of

- o Pathogenicity.
- o Host-defense against Pathogens and pathogenic strategies.
- o Molecular pathogenesis.
- o Experimental studies on Host-Pathogen interaction.
- o Modern approaches to control Pathogens.

UNIT I 9

INTRODUCTION

Introduction to pathogenesis, Attributes of microbial pathogenicity, Components of microbial pathogenicity, Population genetics of Microbial Pathogenicity, Methods to detect genetic diversity and Structure in nature population, Epidemiology, Cryptic diseases.

UNIT II 9

HOST-DEFENSE AGAINST PATHOGENS AND PATHOGENIC STRATEGIES

Attributes and components of microbial pathogenesis, Host Defense : Skin, Mucosa, Cilia, Secretions, Physical movements, Limitation of free iron, Antimicrobial compounds, Mechanism of killing by humoral and cellular defense mechanisms, Complements, Inflammation process, General disease symptoms, Pathogenic adaptations to overcome the above defenses.

UNIT III 10

MOLECULAR PATHOGENESIS (WITH SPECIFIC EXAMPLES)

Virulence, Virulence factors, Virulence-associated factors and virulence lifestyle factors, Molecular genetics and gene regulation in virulence of pathogens, Vibrio Cholerae : Cholera toxin, Co-regulated pili, Survival E. coli pathogens : Enterotoxigenic E. coli (ETEC), Labile and stable toxins, Entero-pathogenic E. coli (EPEC), Type III secretion, Cytoskeletal changes, Intimate attachment; Enterohaemerrohogic E. coli (EHEC), Mechanism of bloody diarrohea and Hemolytic Uremic Syndrome, Enteroaggregative E. coli (EAEC). Plasmodium : Life cycle, Erythrocyte stages, Transport mechanism and processes to support the rapidly growing schizont, Parasitiparous vacuoles and knob protein transport, Antimalarials based on transport processes. Influenza virus : Intracellular stages, Neuraminidase and Haemagglutinin in entry, M1 and M2 proteins in assembly and disassembly, Action of amantidine.

UNIT IV 8

EXPERIMENTAL STUDIES ON HOST-PATHOGEN INTERACTIONS

Virulence assays : Adherence, Invasion, Cytopathic, Cytotoxic effects, Criteria and tests in identifying virulence factors, Attenuated mutants, Molecular characterization of virulence factors, Signal transduction and host responses.

UNIT V 9

MODERN APPROACHES TO CONTROL PATHOGENS

Classical approaches based on serotyping, Modern diagnosis based on highly conserved virulence factors, Immuno and DNA-based techniques. New therapeutic strategies based on recent findings on molecular pathogenesis of a variety of pathogens, Vaccines - DNA, Subunit and cocktail vaccines.

METABOLIC ENGINEERING

AIM

To provide an in-depth understanding of the various aspects of Metabolic engineering.

OBJECTIVES

To understand the concepts of

- o Regulation of Biomolecules.
- o Synthesis of Primary metabolites.
- o Biosynthesis of Secondary metabolites.
- o Bioconversions.
- o Regulation of Enzyme production.

UNIT I 9

INTRODUCTION

Introduction - Jacob Monod model, Catabolite regulation, Glucose effect, cAMP deficiency, Feed back regulation, Regulation in branched pathways, Differential regulation by isoenzymes, Concerted feed back regulation, Cumulative feed back regulation, Amino acid regulation of RNA synthesis, Energy charge, Regulation, Permeability control passive diffusion, Active transport group transportation.

UNIT II 8

SYNTHESIS OF PRIMARY METABOLITES

Alteration of feed back regulation, Limiting accumulation of end products, Feed back, Resistant mutants, Alteration of permeability, Metabolites.

UNIT III 9

BIOSYNTHESIS OF SECONDARY METABOLITES

Precursor effects, Prophophase, Idiophase relationship, Enzyme induction, Feed back regulation, Catabolite regulation by passing control of secondary metabolism, Producers of secondary metabolites.

UNIT IV 10

BIOCONVERSIONS

Advantages of bioconversions, Specificity, Yields, Factors important to bioconversion, Regulation of enzyme synthesis, Mutation, Permeability, Co-metabolism, Avoidance of product inhibition, Mixed or sequential bioconversions, Conversion of insoluble substances.

UNIT V 9

REGULATION OF ENZYME PRODUCTION

Strain selection, Improving fermentation, Recognizing growth cycle peak, Induction, Feed back repression, Mutants resistant to repression, Gene dosage.

CONCEPTS IN BIOTECHNOLOGY

AIM

To develop the skills of the student in different areas of Biotechnology and its potential impacts on all areas of biology.

OBJECTIVES

To have a through knowledge about

- Transgenic plants, animals and its uses.
- Application of microbes in Industry.
- Gene therapy, Stem cell technology and Tissue engineering.
- Application of Environmental biotechnology.
- Production of recombinant pharmaceutical products.

UNIT I 8

PLANT AND ANIMAL BIOTECHNOLOGY

Plant tissue culture and application of transgenics for crop improvement in agriculture, horticulture and forestry, Plantibodies, plastic from plant Flavr Savr Tomato, Transgenic animals and its uses.

UNIT II 9

MEDICAL BIOTECHNOLOGY

Gene therapy - gene delivery methods, New approaches, Applications of stem cell in the treatment for major diseases in reparative medicine, Hematopoietic Stem Cell transplantation, Applications of tissue engineering - reconstruction of connective tissues, epithelial and endothelial surfaces, DNA fingerprinting, DNA based diagnosis of Genetic disease.

UNIT III 9

BIOPHARMACEUTICAL TECHNOLOGY

Production of recombinant pharmaceutical products - Biotech-

nology derived products (Therapeutic proteins): Study of hematopoietic growth factor, Interferons and Interleukins, Insulin, Growth hormones, Vaccines and Monoclonal antibody based pharmaceuticals, Recombinant coagulation factors and thrombolytic agents, Somatostatin, Somatotropin.

UNIT IV 9

BIOPROCESS TECHNOLOGY

Application of microbes in industry - Industrial Processing, recovery, extraction and pur ification, Production of antibiotics, solvents, organic acids, amino acids, enzymes, vitamins, single cell protein, food substances from brewing and dairy industry.

UNIT V 10

ENVIRONMENTAL BIOTECHNOLOGY

Use of genetically engineered organisms, Bioremediation and its applications. Fuel technology - Ethanol and Biogas. Biotechnological applications in waste management, Novel methods for pollution control, Biosensors, Biodegradable plastics, Biotechnology in Pesticide, Tannery and Paper industry.

NEUROSCIENCE

AIM

To know the fundamentals of Neuroscience by studying the Neuroanatomy, Physiology, Pathology, Pharmacology of the Nervous system.

OBJECTIVES

To impart Knowledge on

- o Neuroanatomy - Central and peripheral nervous system.
- o Neurophysiology - Action Potenials and Coding by neurons.
- o Neuropharmocology - Neurotransmitters.
- o Pathology of the Nervous system - Disorders
- o Neurotechniques - To understand the chemistry and functions of Nervous system.

UNIT I 9

NEUROANATOMY

What are central and peripheral nervous systems; Structure and function of neurons; types of neurons; Synapses; Glial cells; myelination; Blood Brain barrier; Neuronal differentiation; Characterization of neuronal cells; Meninges and Cerebrospinal fluid; Spinal Cord.

UNIT II 9

NEUROPHYSIOLOGY

Resting and action potentials; Mechanism of action potential conduction; Voltage dependent channels; nodes of Ranvier; Chemical and electrical synaptic transmission; information representation and coding by neurons.

UNIT III 9

NEUROPHARMACOLOGY

Synaptic transmission, neurotransmitters and their release; fast and slow neurotransmission; characteristics of neurites; hormones and their effect on neuronal function.

UNIT IV 9

PATHOLOGY OF THE NERVOUS SYSTEM

Molecular and cellular mechanisms - pathological features of genetics of multiplesclerosis - Parkinson's Diseases - Huntington's Diseases - Alzheimer's Diseases.

UNIT V 9

NEUROSCIENCE METHODS AND TECHNIQUES

Techniques to understand the functions of nervous system: Patch clamp techniques, intracellular recording, extra cellular recording, mass unit recording, Evoked potentials and electro encephalographic(EEG). Techniques to understand the chemistry of nervous system: Brain imaging, CT scan, PET, MRI, FMRI, Angiography.

BIOCONJUGATE TECHNOLOGY

AIM

To develop the skills of student in the area of Bioconjucate technology.

OBJECTIVES

At the end of the course, the student would have learnt about.

- o Modification of amino acids, sugars and nucleic acids.
- o Chemistry of active groups.
- o Chemical tags and probes in Bioconjucate technology.
- o Enzyme and DNA labelling.
- o Applications.

UNIT I 8

FUNCTIONAL TARGETS

Modification of Amino acids, Peptides and Protein - Modification of sugars, Polysaccharides and glycoconjugates - Modification of nucleic acids and oligonucleotides.

UNIT II 9

CHEMISTRY OF ACTIVE GROUPS

Amine reactive chemical reactions - Thiol reactive chemical reactions - Carboxylate reactive chemical reactions - Hydroxyl reactive chemical reactions - Aldehyde and ketone reactive chemical reactions - Photoreactive chemical reactions.

UNIT III 9

BIOCONJUGATE REAGENTS

Zero length cross linkers - Homobifunctional cross linkers - Heterobifuntional crosslinkers - Trifunctional cross linkers - Cleavable reagent systems - tags and probes.

UNIT IV 9

ENZYME AND NUCLEIC ACID MODIFICATION AND CONJUCATION

Properties of common enzyme - Activated enzymes for conjugation - biotinylated enzymes - chemical modification of nucleic acids - biotin labeling of DNA - enzyme conjugation to DNA - Fluorescent of DNA.

UNIT V 10

BIOCONJUGATE APPLICATIONS

Preparation of Hapten - carrier immunogen conjugates - antibody modification and conjugation - immunotoxin conjugation techniques - liposome conjugated and derivatives - Colloidal - gold - labelled proteins - modification with synthetic polymers.

CRYOPRESERVATION THEORY AND APPLICATIONS

AIM

To impart knowledge on the fundamentals, basic concepts and principles involved in Cryopreservation.

OBJECTIVES

To study in detail about the

- o Principles of cryopreservation.
- o Cryogenics and ex situ conservation.
- o Cellular cryobiology and anhydrobiology.
- o Embryo cryofreezing and cryopreservation.
- o Cryopreservation in therapeutics and aquaculture.

UNIT I 9

INTRODUCTION

Cryopreservation - History and Definition, temperature factor - normal biochemical reaction leading to death, Damages caused by general freezing of cell and tissues, Natural cryopreservation, Gaia theory (James Love Lock), freezing and refrigeration.

UNIT II 9

VARIATION IN CRYOPRESERVATION

Cryobiology, Cryogenics, Frozen zoo, ex situ conservation, Long time preservation.

UNIT III 9

TECHNOLOGY OF CRYOPRESERVATION

General Biotechnology in cryopreservation, Cellular cryobiology and anhydrobiology, Deep freezing damages, in vitro storage and cryopreservation.

UNIT IV 9

CRYOPRESERVATION AND FERTILITY

Fertility failures, Embryo cryofreezing, techniques in embryo freezing, Storage thawing, retrieval, Cryoprotectant solut ion.

UNIT V 9

CRYOPRESERVATION MAN'S HOPE

Cryopreservation of egg, Sperm of Homosapiens, Techniques employed in aquaculture (Fish Plankton), Cawthron collection, Design and use of thermal transport containers for cryopreservation, Role of cryopreservation in therapeutics.

Total : 45 Hours

STEM CELL BIOLOGY

AIM

To understand the fundamental concept of Stem cell technology.

OBJECTIVES

At the end of the course the student would have gained extensive knowledge on

- Types of Stem cell and its characterization.
- Cell lines and Tissue engineering.
- Isolation and Cloning of stem cells.
- Types of Stem cell transplantation.
- Applications and Ethics.

UNIT I 8

INTRODUCTION

Stem cell - Definition, Embryonic stem cells, Adult stem cells, Origin and characterization of human stem cells and potential applications for stem cell research, Cord blood stem cells, Stem cell marker

UNIT II 10

CELL LINES AND TISSUE ENGINEERING

Cell types and sources, Human tissue culture media, Culturing of cell lines, Biology and characterization of cultured cells, Maintenance and management of cell lines, Reconstruction of connective tissues, Reconstruction of epithelial or endothelial surfaces - Cells embedded in extracellular matrix material, Culture on a single surface and sandwich configuration, Bioreactor design on tissue engineering - Hollow fibre systems, Microcarrier based systems, Liver tissue engineering.

UNIT III 9

ISOLATION AND CLONING OF STEM CELLS

Protocols for isolation and identification of stem cells, Culturing and subculturing human neurospheres, Differentiation of human neurospheres, mesenchymal cells, Inner cell mass. Immunolabelling procedures, Stem cells and cloning.

UNIT IV 9

TRANSPLANTATION AND TRANSFECTION

Types of stem cell transplantation - Autologous, Allogeneic, Syngeneic; Nuclear transplantation, Therapeutic transplantation, Transfection methods-Lipofection, Electroporation, Microinjection, Embryonic stem cell transfer and Targetted gene transfer.

UNIT V 9

APPLICATIONS AND ETHICS

Neural stem cells for Brain / Spinal cord repair, Miracle stem cell heart repair, Stem cell and future of regenerative medicine, Haematopoietic stem cell therapy for autoimmune disease, Prenatal diagnosis of genetic abnormalities using foetal CD 34+ stem cells, Embryonic stem cell - A promising tool for cell replacement therapy, Germ-line therapy, Human stem cell research in India, Human embryonic stem cell ethics and Public policy.

CLINICAL TRIALS

AIM

To understand the basic concepts in Clinical trial and its importance and applications.

OBJECTIVES

- o Purpose of Clinical research.
- o Terminology used in Clinical research.
- o Clinical trials - Phase - I, II, III, and IV.
- o Preclinical toxicology study.
- o Applications.

UNIT I 9

PURPOSE OF RESEARCH

Research - Meaning, Purpose, Types, (Educational, Clinical, Experimental, Historical Descriptive, Basic applied and Patent oriented research), Objectives of research, Literature survey - Use of Library, Books and Journals - Medlines - Internet, Patent Search and Reprints of articles as a source for Literature survey, Selecting a problem and preparing research proposals.

UNIT II 9

BASIC TERMINOLOGY USED IN CLINICAL RESEARCH

Types of clinical trials, Single blinding, Double blinding, Open access, Randomized trials and their examples, Interventional study, Ethics committee and its members, Cross over design, etc. and Institution Ethics Committee / Independent Ethics Committee, Data management in clinical research.

UNIT III CLINICAL TRIALS 10

New drug discovery process - Purpose, Main steps involved in new drug discovery process, Timelines of each steps, Advantages and purposes of each steps, Ethics in clinical research, Unethical trials, Thalidomide tragedy, Phase - I, II, III, IV trials (Introduction and designing, Various phases of clinical trials, Post marketing surveillance, Methods, Principles of sampling, Inclusion and exclusion criteria, Methods of allocation and randomization, Informed consent process in brief, Monitoring treatment outcome, Termination of trial, Safety monitoring in clinical trials).

UNIT IV 8

PRECLINICAL TOXICOLOGY

General principles, Systemic toxicology (Single dose and repeat dose toxicity studies), Carcinogenicity, Mutagenicity, Teratogenicity, Reproductive toxicity, Local toxicity, Genotoxicity, Animal toxicity requirements.

UNIT V 9

APPLICATIONS

Study of various clinical trials (completed or ongoing), Clinical trial applications in India Import and export of drug in India, Investigational New Drug application (IND), Abbreviated New Drug Application (ANDA), New Drug Application (NDA).

MATERIAL SCIENCES AND TECHNOLOGY

AIM

To study about the Structure and functions of Biomolecules and Biomaterials.

OBJECTIVES : To understand

- o The solid crystalline structure and properties of Biomolecules.
- o Structure and functional relationship of Proteins and Nucleic acid.
- o Techniques to study Biomolecular structure.
- o Production and uses of Biomaterials.
- o Synthesis and uses of Biopolymers.

UNIT I 10

BIOMATERIALS

Definition, Classification, Mechanical properties, Visco elasticity, Wound healing, Body responses to implant materials. Carbohydrates, Modified carbohydrates for biomedical applications, Polydextrose. Proteins, Collagen, Fibroin their structure and production. Biopolymers - Definition, Synthesis, Dextrans, Polyhydroxybut yrate(PHB), Polycaprolactone (PCL), Polyphenol resins; Production of a copolymer of PHB and PHV (polyhydrovaleric acid), Biodegradable polymers.

UNIT II 9

BIOPHYSICAL PROPERTIES

Strong and weak interactions in biomolecules, Dielectric properties of biomolecules, Electronic properties of biomolecules - Conductivity, Photoconductivity and Piezoelectric effect. Unit cells, Crystal structures (Bravais Lattices), Theoretical density computations, Crystallography and Miller indices.

UNIT III 9

IDENTIFICATION OF BIOMOLECULES

X-ray crystallography, Plane polarised light, Circular and elliptical polarised light, Definition of Circular Dichroism (CD), Optical, Rotatory Dispersion (ORD) and their comparative studies, Application to biomolecules, Phenomenon of Luminescence, Fluorescence, Phosphorescence.

UNIT IV 9

CONFORMATIONS OF PROTEINS AND NUCLEIC ACIDS

Conformation of proteins and enzymes, Energy status, Modification of structure, Dynamics of protein folding, Helix coil transformation, Structure in relation to function, Co-operative properties of enzymes. Conformation of nucleic acids, Helix coil transformation, Thermodynamics of DNA denaturation, Changes in nucleic acid structure.

UNIT V 9

APPLICATIONS OF BIOMATERIALS

Artificial heart, prosthectic, cardiac, limb prosthesis, externally procured limb prosthesis and dental implants, Soft tissue replacements, sutures, percutaneous and skin implants,maxillofacial augumentation, heart tissue replacement implants, fracture fixation devices, joint replacements.

BIOLOGICAL SPECTROSCOPY

AIM

The course enables the student to understand the principles of various spectroscopic techniques and its significance to biological systems and processes.

OBJECTIVES

To emphasize on the principles, operations and applications of

- o General spectroscopic techniques.
- o Infrared Spectroscopy.
- o Ultraviolet - Visible Spectroscopy.
- o Nuclear Magnetic Resonance Spectroscopy.
- o Electron Para Magnetic Resonance Spectroscopy.

UNIT I 9

SPECTROSCOPY AND OPTICAL ROTATORY DISPERSION

Interaction of radiation with matter, definitions frequency, wavelength, wave number, type of electromagnetic radiation, inter particle forces and energies, energy levels, population of energy levels, scattering, absorption and emission, Polarized light, Optical rotation, Circular dichroism - Circular dichroism of nucleic acids and proteins.

UNIT II 9

ULTRA - VIOLET AND VISIBLE ABSORPTION SPECTROSCOPY

Electronic energy levels - electronic transitions, Selection regales, Absorption range of biological chromophores, Transition metal d-d transitions - Charge transfer spectra, Application of

UV spectra to proteins, Properties associated with the transition dipole moment and interactions between them, Measurement of molecular dynamics by fluorescence spectroscopy.

UNIT III 8

MASS SPECTROSCOPY

Ion sources sample introduction - Mass analyzers and ion detectors, Biomolecule mass spectrometry - Peptide and protein analysis - Carbohydrates and small molecules, Specific applications.

UNIT IV 10

NUCLEAR MAGNETIC RESONANCE

The phenomenon - Magnetization - Measurement, Spectral parameters in NMR, Intensity, Chemical shift-spin, Spin coupling, T1 and T2 relaxation times, Line widths, Nuclear overhauser effect, Chemical exchange, Paramagnetic centers, Applications of NMR in biology, Assignment in NMR, Studies of macromolecules, Ligand binding, Ionization studies and pH kinetics, Molecular motion.

UNIT V 9

ELECTRON PARAMAGNETIC RESONANCE

Introduction - Resonance condition - Measurement - Spectral parameters, Intensity g values - Spectral anisotropy, Time scale of EPR - Spin labels transition metal ions, Spin trapping.

BIOPHYSICS

AIM

To develop the skills of the students in the area of Biophysics

OBJECTIVES

To study in detail about

- Molecular structure of biological system.
- Conformation of proteins
- Conformation of nucleic acids.
- Transport across ion channels.
- Energetics of biological system.

UNIT I 9

MOLECULAR STRUCTURE OF BIOLOGICAL SYSTEMS

Intra molecular bonds - covalent - ionic and hydrogen bonds - biological structures - general features - water structure - hydration - interfacial phenomena and membranes - self assembly and molecular structure of membranes.

UNIT II 9

CONFORMATION OF NUCLEIC ACIDS

Primary structure - the bases - sugars and the phosphodiester bonds - double helical structure - the a, b and z forms - properties of circular DNA - topology - polymorphism and flexibility of DNA - structure of ribonucleic acids - hydration of nucleic acids.

UNIT III 9

CONFORMATION OF PROTEIN

Conformation of the peptide bond - Secondary structures - Ramachandran plots - use of potential functions - Tertiary structure - foldings - hydration of proteins - hydropathy index.

UNIT IV 9

CELLULAR PERMEABILITY AND ION TRANSPORT

Ionic conductivity - transport across ion channels - mechanism - ion pumps - proton transfer - nerve conduction - techniques of studying ion transport and models.

UNIT V 9

ENERGETICS AND DYNAMICS OF BIOLOGICAL SYSTEMS

Concepts in thermodynamics - force and motion - entropy and stability - analyses of fluxes - diffusion potential - basic properties of fluids and biomaterials - laminar and turbulent flows.

Total : 45 Hours

MOLECULAR MODELLING AND DRUG DESIGN

AIM

The subject puts emphasis on the principles of Modelling and the studies of simulation of drug design and delivery.

OBJECTIVES

To familiarize and expose and to develop the skill of the students on the concept of

- Fundamental binding forces in molecules and molecular mechanism.
- Computer simulation methods.
- Molecular dynamic simulation method.
- Metropolis method.
- Significance of molecular Modelling in drug discovery and design.

UNIT I 9

EMPIRICAL FORCE FIELDS MOLECULAR MECHANISMS

Bond stretching, Angle bending, Torsional terms, Improper torsions and Out of plane bonding motions, Electrostatic interactions, Van Der Waals interactions, Effective pair potentials, Hydrogen bonding, Force field models for Simulation of liquid water.

UNIT II 9

COMPUTER SIMULATION METHODS

Calculation of thermodynamic properties, phase space, practical aspects of computer simulation, Boundaries, monitoring the equilibration, truncating potential and minimum image convention, Long range forces, Analysing results of simulation and estimating errors.

UNIT III 9

MOLECULAR DYNAMICS SIMULATION METHODS

Molecular dynamics using simple models, Molecular dynamics with continuous potentials, Setting up and Running Molecular Dynamics simulation, Constraint dynamics, Time dependent properties, Molecular Dynamics at constant Temperature and pressure.

UNIT IV 9

MONTE CARLO SIMULATION METHODS

Metropolis methods, Monte Carlo simulation of molecules, Monte Carlo simulation of polymers, Baised Monte Carlo Methods, Calculating chemical potentials. Monte Carlo or Molecular dynamics.

UNIT V 9

MOLECULAR MODELLING TO DISCOVER AND DESING NEW MOLECULES

Molecular Modelling in drug discovery, Deriving and using 3D Pharmacophores, Molecular docking, Molecular Similarity and Similarity Searching, de novo ligand design.

BIOSENSOR PRINCIPLES AND APPLICATIONS

AIM

To understand the various types of Biosensors and to get familiarised with the principles of Biosensors.

OBJECTIVES

To acquire indepth knowledge in topics like

- o Principles and types of biosensors
- o Components of Biosensors and biochemical recognition
- o Assaying labels and formats for biosensors
- o Applications of Biosensors in medicine and health care
- o Biosensors for environmental monitoring and industrial process

UNIT I 8

PRINCIPLES AND TYPES OF BIOSENSORS

Overview of Biosensor principles, Types of biosensors - Electrochemical, Amperometric, Thermistor, Bioaffinity, Whole cell and opto-electronic biosensor.

UNIT II 10

COMPONENTS OF BIOSENSORS AND BIOCHEMICAL RECOGNITION

Biological components - Enzymes : Biological catalysts, Specificity, Activity, Storage / shelf life. Enzyme kinetics in solution and on a surface. Cells : Signal transduction through chemoreception, Membrane potential, Cell metabolism, Antibodies : Immunochemistry, Binding affinity and kinetics; Hapten synthesis. Nucleic Acids (RNA and DNA) : Basic biochemistry, Hybridization; Amplification / Self replication; Secondary structure and folding, Physical components - Electrode, Photo cell and thermistor.

UNIT III 9

ASSAYING LABELS AND FORMATS FOR BIOSENSORS

Labels : Radioisotopes, Fluorophores, Dyes, Enzymes / Substrates, Liposomes, Electroactive compounds, ELISAs and nucleotide capture assays, Immobilization of biorecognition element; Conjugation of labels.

UNIT IV 9

APPLICATIONS OF BIOSENSORS IN MEDICINE AND HEALTH CARE

Biosensors for diabetics management, Detection of cancer and infectious diseases, Urease, ChOx and tyrosinase, Biosensors and their application in monitoring clinical metabolites, Biochips.

UNIT V 9

BIOSENSORS FOR ENVIRONMENTAL MONITORING AND INDUSTRIAL PROCESS

Detection of pesticides and phenolic compounds, Commercial applications of biosensors in Food, Pharmaceutical and Cosmetic industries.

Total : 45 Hours

BIOPROCESS ECONOMICS AND PLANT DESIGN

AIM

To enhance the skills of the students in the area of Bioprocess Economics and Plant Design.

OBJECTIVES

To learn about

- Business Organizations.
- Project Design and Development.
- Cost Estimation and Profitability.
- Economics and Plant Design.
- Quality control requirements.

UNIT I 9

PROCESS ECONOMICS AND BUSINESS ORGANIZATION

Definition of Bioprocess, Bioprocess economics, Globalization concept - Competition by dumping - Its effect on plant size - Status of India with adjoining ASEAN countries (Singapore, Malaysia, Indonesia, etc.,) - Project profile concept - Detail; Structure and types of organizations; Simple management principles.

UNIT II 9

PROJECT DESIGN AND DEVELOPMENT

Choosing a project, Market survey, Importance of Techno - Economic - Viability, studies, Sourcing of processes, Fixing most economic processes, Technology scanning, Plant location principles, Plant lay out, Process flow sheets, Preparation of budgetary investment and production costs.

UNIT III 9

COST ESTIMATION, PROFITABILITY AND ACCOUNTING

Capital investment, Concept of time-value of money, Source sink concept of profitability, Capital costs, Depreciation, Estimation of capital costs, Manufacturing costs, Working capital, Profitability standards, Project profitability evaluation, Alternative investments and replacements, Annual reports, Balance sheets, Performance analysis.

UNIT IV 9

PROCESS OPTIMIZATION TECHNIQUES

Optimum design - Design strategy, Determination of optimum conditions, Optimum production rates, Optimum conditions for cyclic and semi - cyclic operation, Linearization.

UNIT V 9

QUALITY AND QUALITY CONTROL

Current good manufacturing practices. Concepts of quality control in 20th century; Elements of quality control envisaged by ISI since 1947; Emergence of statistical process control(SPC), Simple SPC concept details, Fundamental concepts of ISO 9000 quality system and the various requirements for ISO certification.

PROCESS INSTRUMENTATION DYNAMICS AND CONTROL

AIM

To understand the basic concepts involved in control system strategies of different process and their instrumentation dynamics.

OBJECTIVES

To study in detail about

- o The dynamics behavior of chemical processes
- o Design of feedback control systems
- o Frequency response analysis
- o Advanced control systems
- o Multiparameter control

UNIT I 9

ANALYSIS OF THE DYNAMIC BEHAVIOUR OF CHEMICAL PROCESSES

Laplace transformation, Transform of standard functions, Derivatives and integrals, Inversion, Theorems in Laplace transformation, Application. Open-loop systems, First order systems and their transient response for standard input functions, First order systems in series, Linearization and its application in process control, Second order systems and their dynamics, Transfer function for chemical reactors and dynamics.

UNIT II 9

DESIGN OF FEEDBACK CONTROL SYSTEMS

Closed loop control systems, Development of block diagram for feed-back control systems, Servo and regulator problems, Transfer function for controllers and final control element,

Principles of pneumatic and electronic controllers, Transportation lag, Transient response of closed-loop control systems and their stability.

UNIT III 8

FREQUENCY RESPONSE ANALYSIS

Introduction to frequency response of closed-loop systems, Control system design by frequency, Bode diagram, Stability criterion, Nyquist diagram; Tuning of controller settings.

UNIT IV 9

ADVANCED CONTROL SYSTEMS

Controller mechanism, Introduction to advanced control systems, Cascade control, Feed Forward control, Control of distillation towers and heat exchangers, Introduction to microprocessors and computer control of chemical processes.

UNIT V 10

MULTIPARAMETER CONTROL

Principles of measurements and classification of process control instruments, Measurements of Temperature, Pressure, Fluid flow, Liquid weight and Weight flow rate, Viscosity and Consistency, pH, Concentration, Electrical and Thermal conductivity, Humidity of gases, Composition by physical and chemical properties and spectroscopy.

Total : 45 Hours

PROCESS MODELLING AND SIMULATION

AIM

This course aims to develop the skills of the students in the area of process Modelling and simulation.

OBJECTIVES

At the end of the course the students would have learnt about

- Basics of Modelling.
- Modelling of chemical engineering systems.
- Dynamic simulation.

UNIT I 9

BASICS OF MODELLING

Principles of formulation, Fundamental laws - continuity equation, Energy equation, Equations for motion, Transport equation, Equations of state, Equilibrium, Chemical kinetics.

UNIT II 9

MODELLING OF CHEMICAL ENGINEERING SYSTEMS - I

CSTR - Series of isothermal, Constant - Holdup CSTR, CSTR with variable hold up, Two heated tar, Gas phase, Pressurized CSTR, Non-isothermal CSTR, Single component vapourizer.

UNIT III 9

MODELLING OF CHEMICAL ENGINEERING SYSTEMS - II

Batch reactor, Reactor with mass transfer, Single component vapourizer, Multi component flash drum, Ideal binary distillation column, Multi component non-Ideal distillation column, Batch distillation with holdup.

UNIT IV 9

DYNAMIC SIMULATION - I

Batch reactor, Gravity flow tank, Three CSTR in series, Non-iso thermal CSTR.

UNIT V 9

DYNAMIC SIMULATION - II

Binary distillation and multi component distillation column, Variable pressure distillation, Ternary batch distillation with holdup.

BIOREACTOR THEORY

AIM

To impart more knowledge about Bioreactors.

OBJECTIVES

On completion of the course the students are expected to know about

- Bioreactor Principles.
- Ideal and Non-ideal Bioreactors.
- Optimization.
- Types of Bioreactors.
- Design and Modelling of Bioreactors.

UNIT I 9

BIOREACTOR PRINCIPLES

Definition of Bioreactor, Basic principles of Bioreactor, Classification of bioreactors, heat transfer in bioreactors - stirred liquids, Application of design equation, relationship between heat transfer, cell concentration and stirring conditions.

UNIT II 9

IDEAL AND NON-IDEAL BIOREACTORS

Analysis of batch, Continuous flow, Fed batch bioreactor, Non-ideal effects

UNIT III 8

OPTIMIZATION

Optimization of reactor system, Multiphase Bioreactor.

UNIT IV BIOREACTOR TYPES 10

Unconventional bioreactors, Hollow fiber reactor, Air lift Bioreactors, Hydrodynamic three phase flow, Perfusion reactor for animal and plant cell culture, Control of bioreactor.

UNIT V 9

DESIGN AND MODELLING

Bioreactor Modelling and stability anlaysis, Mechanical design of bioreactors.

Total : 45 Hours

BIOREACTOR DESIGN

AIM

To understand the relevance and the art of Bioreactor design and operation according to the applied microbial culture, basic chemical and biochemical engineering principles and modes of operation.

OBJECTIVES

To have a in-depth knowledge in

- The Fermentation technology, kinetics and sterilization of bioreactors
- Material and energy balance in fermentation process.
- Mass transfer in Bioreactors and scale-up
- Types of bioreactors
- Bioreactor control systems

UNIT I 9

FERMENTATION

Fermentation Technology - Medium formulation, Design and operation of a fermentation process, Batch, Fed batch, Continuous and chemostat principles and the modes of operation. Sterilization of reactors - Batch sterilization, Continuous sterilization.

UNIT II 9

MATERIAL AND ENERGY BALANCES

Material Balance - General mass balance - Stoichiometry of growth and product formation, Growth stoichiometry and elemental balances - Electron balances - Biomass yield, Product stoichiometry. Energy balance - General energy balance equations - Enthalpy - Enthalpy change in non reactive processes - Enthalpy change due to reaction - Energy balance equation for cell culture.

UNIT III 9

MASS TRANSFER IN BIOLOGICAL SYSTEMS

Mass and heat transport processes - Rheological properties of fermentation broths, Fluid dynamics, Mixing equipment - The impellers in bioreactors - Pneumatic mixing and circulation pumps, Liquid flow models, Power requirements for mixing, Scale-up of mixing systems, Heat and mass transport in liquid substrates.

UNIT IV 9

BIOREACTOR TYPES

Types of bioreactors, Immobilized bioreactor, Packed-bed bioreactor, Bubble-column bioreactors, Fluidized bed bioreactors, Trickle bed bioreactors, Membrane bioreactors and fine product bioreactors, Large-scale bioreactors, Photo bioreactors for plant cells and algae cultivations, Solid state substrate bioreactors and bioreactor design, Reactors for large scale production using animal cells.

UNIT V 9

BIOREACTOR CONTROL SYSTEMS

Bioreactor on-line, In-line and off-line instrumentation control - Physical and chemical sensors for the medium and gases, On-line sensors for cell properties, Off-line analytical methods, Computers and interfaces, Data analysis, Process control, Advanced control strategies, Optical and biosensors, Bioreactor case studies.

Total : 45 Hours

ENVIRONMENTAL BIOTECHNOLOGY

AIM

To understand the role of Microorganisms and Biotechnology in combating the various aspects of Environmental pollution.

OBJECTIVES

To discuss in detail about the

- o Ecosystems concept and function.
- o Environmental pollution and its management.
- o Treatment of industrial wastes.
- o Environmental issues and protection act.
- o Human population and value education.

UNIT I 11

ENVIRONMENT AND ITS COMPONENTS AND FUNCTION

Definition, Scope - Objective and importance, Concept of ecosystem - Types (Water, Air and Land), Ecological adaptation, Structure and function of an ecosystem - Biogeochemical cycle - Producers, Consumers, Decomposers, Energy flow in the ecosystem, Food chain, Food web and Ecological pyramids and its importance. Biodiversity - Concept - Values of biodiversity, Endangered and Endemic species in India, Hot spots of biodiversity - Threads to biodiversity, Sustainable development, Conservation - In situ and Ex-situ.

UNIT II 9

ENVIRONMENT AL POLLUTION AND ITS MANAGEMENT

Definition - Causes, Effect and Control measures of Air, Water, Soil, Noise, Thermal and Nuclear pollution, Soil waste Management. Design and modelling of activated sludge process, Mathematical modelling of anaerobic - Digested dynamics

UNIT III 8

TREATMENT OF INDUSTRIAL WASTE

Treatment of industrial waste - Dairy, Pulp, Dye, Leather and Pharmaceuticals. Recent development pertaining to Environment biotechnology.

UNIT IV 9

ENVIRONMENTAL ISSUES AND PROTECTION ACT

Existing environmental issue - Changing climates, Global warming, Acid rain, Green house effect, Ozone layer depletion, Global, National and Regional laws governing environment, Report preparation regarding environmental Changes / Case studies.

UNIT V 8

HUMAN POPULATION AND VALUE EDUCATION

Population growth, Variation among Nations - Popu lation explosion - Family welfare program - Environment and human health - Human rights - Value education - HIV / AIDS - Women and child welfare - Role of information technology in environment and human health - Case studies.

BIOBUSINESS AND BIOENTREPRENEURSHIP

AIM

To understand the basics of entrepreneurship and concepts involved in Bio entrepreneurship.

OBJECTIVES

To discuss in detail about the

- Entrepreneurship in biotechnology
- Understanding biotech invention and the FDA approval process
- Biotech demand and investment
- Risk management considerations for Biotech investors
- R & D for entrepreneurship

UNIT I 9

ENTREPRENEURSHIP IN BIOTECHNOLOGY

Why Biotech? , Biotechnology innovations benefits society, Pharma and Biotech Industry, Entrepreneurship in Biotechnology, What is bioentrepreneurship?, Profiling the bioentrepreneur, Intellectual capital in Biotech firms, Global healthcare markets in Biotechnology.

UNIT II 9

UNDERSTANDING BIOTECH INVENTION AND THE FDA APPROVAL PROCESS

Biotechnology inventions and Patents, FDA Approval Process for drugs, Stages of FDA Approval process.

UNIT III 9

BIOTECH DEMAND AND INVESTMENT

Introduction to Biotech investing: Value investing, Growth investing, The industry life cycle, Biotechnology investment trading

rules, Bioindustry - Global and Indian Scenario, Policy Environment of Biotech Industries in India. Government funding for Biotechnology, Venture capital financing of Biotechnology, Perceptional analysis of biotech companies (A case study).

UNIT IV 9

RISK MANAGEMENT CONSIDERATIONS FOR BIOTECH INVESTORS

Retention of position and Associated Risk, Liquidation of position and reinvestment of Net proceeds, Hedging, Monetizing and Diversification Strategies.

UNIT V 9

R & D FOR ENTREPRENEURSHIP

Knowledge centres like universities and research institutions; Role of technology and upgradation; Assessment of scale of development of Technology; Managing Technology Transfer; Regulations for transfer of foreign technologies; Technology transfer agencies. Global demand for Biomass and biofuels: Technologies, Markets and Policies

Total : 45 Hours

PROCESS ECONOMICS AND INDUSTRIAL MANAGEMENT

AIM

To introduce Process economics and industrial management principles to Biochemical engineers.

OBJECTIVES

The objective of this course is to teach

- o Production management.
- o Principles of cost estimation.
- o Profitability and investment.
- o Annual Reports.
- o Quality control.

UNIT I 10

PRINCIPLES OF PRODUCTION MANAGEMENT AND ORGANISATION

Planning, Organization, Staffing, Co-ordination, Directing, Controlling, Communicating, Organization as a process and a structure, Types of organizations, Method of study, Work measurement techniques, Basic procedure, Motion study, Motion economy, Principles of time study, Elements of production control, Forecasting, Planning, Routing, Scheduling, Dispatching, Costs and costs control, Inventory and inventory control.

UNIT II 8

ENGINEERING ECONOMICS FOR PROCESS ENGINEERS - INTEREST, INVESTMENT COSTS AND COST ESTIMATION

Time value of money, Capital costs and depreciation, Estimation of capital cost, Manufacturing costs and working capital, Invested capital and profitability.

UNIT III 9

PROFITABILITY, INVESTMENT ALTERNATIVE AND REPLACEMENT

Estimation of project profitability, Sensitivity analysis, Investment alternatives, Replacement policy, Forecasting sales, Inflation and its impact.

UNIT IV 9

ANNUAL REPORTS AND ANALYSIS OF PERFORMANCE

Principles of accounting, Balance sheet, Income statement, Financial ratios, Analysis of performance and growth.

UNIT V 9

ECONOMIC BALANCE AND QUALITY AND QUALITY CONTROL

Essentials of economic balance - Economic balance approach, Economic balance for insulation, Evaporation, Heat transfer, Elements of quality control, Role of control charts in production and quality control.

Total : 45 Hours

CYBER SECURITY

AIM

To study the critical need for ensuring security in real time problems.

OBJECTIVES

The students are introduced to

- o The basics of Cyber security.
- o Various attacker techniques.
- o Legal, ethical and professional issues.
- o Malicious code.
- o Defence and analysis techniques

UNIT I 9

CYBER SECURITY FUNDAMENTALS

Network and security concepts - Basic cryptography - Symmetric encryption - Public key Encryption - DNS - Firewalls - Virtualization - Radio frequency identification - Microsoft windows security principles.

UNIT II 9

ATTACKER TECHNIQUES AND MOTIVATIONS

Antiforensics - Tunneling techniques - Fraud techniques - Threat infrastructure.

UNIT III 9

EXPLOITATION

Techniques to gain a foot hold - Misdirection, Reconnaissance and disruption methods.

UNIT IV 9

MALICIOUS CODE

Self replication Malicious code - Evading detection and elevating privileges - Stealing information and exploitation.

UNIT V 9

DEFENCE AND ANALYSIS TECHNIQUES

Memory forensics - Honeypots - Malicious code naming - Automated malicious code analysis systems - Intrusion detection systems - Defense special file investigation tools.

Total : 45 Hours

TEXT BOOK

1. James Graham, Richard Howard and Ryan Olson, 2011. Cyber Security Essentials. CRC Press, Taylor & Francis Group.

PROFESSIONAL ETHICS IN ENGINEERING

AIM

To sensitize the engineering students on blending both technical and ethical responsibilities.

OBJECTIVES

The students acquire knowledge to

- Identify the core values that shape the ethical behavior of an engineer.
- Utilize opportunities to explore one's own values in ethical issues.
- Become aware of ethical concerns and conflicts.
- Enhance familiarity with codes of conduct.
- Increase the ability to recognize and resolve ethical dilemmas.

UNIT I 9

ENGINEERING ETHICS

Senses of 'Engineering Ethics' - Variety of moral issues - Types of inquiry - Moral dilemmas - Moral Autonomy - Kohlberg's theory - Gilligan's theory - Consensus and Controversy -Professions and Professionalism - Professional Ideals and Virtues - Uses of Ethical Theories.

UNIT II 9

ENGINEERING AS SOCIAL EXPERIMENTATION

Engineering as Experimentation - Engineers as responsible Experimenters - Research Ethics - Codes of Ethics - Industrial Standards - A Balanced Outlook on Law - The Challenger Case Study

UNIT III 9

ENGINEER'S RESPONSIBILITY FOR SAFETY

Safety and Risk - Assessment of Safety and Risk - Risk Benefit Analysis - Reducing Risk - The Government Regulator's Approach to Risk - Chernobyl Case Studies and Bhopal

UNIT IV 9

RESPONSIBILITIES AND RIGHTS

Collegiality and Loyalty - Respect for Authority - Collective Bargaining - Confidentiality -Conflicts of Interest - Occupational Crime - Professional Rights - Employee Rights -Intellectual Property Rights (IPR) - Discrimination.

UNIT V 9

GLOBAL ISSUES

Multinational Corporations - Business Ethics - Environmental Ethics - Computer Ethics - Role in Technological Development - Weapons Development - Engineers as Managers - Consulting Engineers - Engineers as Expert Witnesses and Advisors - Honesty - Moral Leadership -Sample Code of Conduct.

Total : 45 Hours

TEXT BOOKS

1. Mike Martin and Roland Schinzinger, "Ethics in Engineering", McGraw Hill, New York (2005).

2. Charles E Harris, Michael S Pritchard and Michael J Rabins, "Engineering Ethics Concepts and Cases", Thompson Learning, (2000).
