

VINAYAKA MISSIONS UNIVERSITY
SALEM, INDIA

**FACULTY OF ENGINEERING AND
TECHNOLOGY**

REGULATION -2012

**CURRICULUM AND SYLLABUS
FROM
I TO VIII SEMESTERS
FOR**

**B.Tech-INFORMATION TECHNOLOGY
(REGULAR)**

VINAYAKA MISSIONS UNIVERSITY

CURRICULUM 2012-2013

**B. Tech. - INFORMATION TECHNOLOGY
SEMESTER I**

Sl.No	Course Code	Course Title	Dept. Offering the course	L	T	P	C
THEORY							
1		English for Effective Communication	ENGLISH	3	0	0	3
2.		Engineering Mathematics I	MATHS	3	0	1	4
3.		Computer Foundation Program	CSE	3	0	0	3
4.		Environmental Science & Engineering	CHEMISTRY	3	0	0	3
5.		Engineering Physics	PHYSICS	3	0	0	3
6.		Basic Civil & Mechanical Engineering a) Civil Engineering b) Mechanical Engineering	CIVIL MECHANICAL	3	0	0	3
PRACTICAL							
7.		Engineering Physics Lab	PHYSICS	0	0	4	2
8.		Workshop Practice	MECHANICAL	0	0	4	2
9.		Computer Foundation Program Lab	CSE	0	0	4	2
TOTAL				18	0	13	25

SEMESTER II

Sl.No	Course Code	Course Title	Dept. Offering the course	L	T	P	C
THEORY							
10.		Business English	ENGLISH	3	0	0	3
11.		Engineering Mathematics II	MATHS	3	0	1	4
12.		Engineering Chemistry	CHEMISTRY	3	0	0	3
13.		Programming in C	CSE	3	0	0	3
14.		Basic Electrical & Electronics Engineering a) Electrical Engineering b) Electronics Engineering	EEE ECE	3	0	0	3
15.		Fundamentals of Algorithms	CSE	3	0	0	4
PRACTICAL							
16.		Engineering Chemistry Lab	CHEMISTRY	0	0	4	2
17.		Basic Electrical & Electronics Engineering Lab a) Electrical Engineering Lab b) Electronics Engineering Lab	EEE ECE	0	0	4	2
18.		Programming in C Lab	CSE	0	0	4	2
TOTAL				18	0	13	26

SEMESTER III

(Applicable to the students admitted from the Academic year 2012-2013 onwards)

Code No.	Course Title	L	T	P	C
THEORY					
1 (Allied core)	Advanced Engineering Mathematics (Common to CSE, IT)	3	1	0	4
2 (Allied core)	Digital Electronics (Common to CSE, IT)	3	0	0	3
3 (Main core)	Data Structures (Common to CSE, IT, EEE, EIE, ECE, MECT, BME)	3	0	0	3
4 (Main core)	Object Oriented Programming (Common to CSE, IT, EEE, ECE, BME, EIE)	3	0	0	3
5 (Main core)	Computer Architecture (Common to CSE, IT)	3	0	0	3
6 (Main core)	Introduction to Information Technology	3	0	0	3
PRACTICAL					
1	Digital Electronics lab (Common to CSE, IT)	0	0	4	2
2	Data Structures Lab (Common to CSE, IT, EEE & EIE)	0	0	4	2
3	Object Oriented Programming Lab (Common to CSE, IT)	0	0	4	2
TOTAL		18	1	12	24

SEMESTER IV**(Applicable to the students admitted from the Academic year 2012-2013 onwards)**

Code No.	Course Title	L	T	P	C
THEORY					
1 (Allied core)	Probability and Queuing Theory (Common to CSE, IT)	3	1	0	4
2 (Main core)	Software Engineering & Quality Assurance (Common to CSE, IT)	3	0	0	3
3 (Main core)	Operating Systems (Common to CSE, IT)	3	0	0	3
4 (Main core)	Database Management Systems (Common to CSE, IT)	3	0	0	3
5 (Main core)	Graphics Design and Multimedia Animation (Common to CSE, IT)	3	0	0	3
6 (Main core)	Computer Networks (Common to CSE, IT)	3	0	0	3
PRACTICAL					
1	Operating Systems Lab (Common to CSE, IT)	0	0	4	2
2	DBMS Lab (Common to CSE, IT)	0	0	4	2
3	Graphics and Multimedia Lab (Common to CSE, IT)	0	0	4	2
4	Professional Communication & Personality Development	0	0	4	2
TOTAL		18	01	16	27

SEMESTER V**(Applicable to the students admitted from the Academic year 2012-2013 onwards)**

Code No.	Course Title	L	T	P	C
THEORY					
1 (Allied core)	Discrete Mathematics (Common to CSE, IT)	3	1	0	4
2 (Main core)	Programming and Interfacing with processors (Common to CSE, IT)	3	0	0	3
3 (Main core)	Java Programming (Common to CSE, IT)	3	0	0	3
4 (Main core)	Object Oriented Analysis and Design (Common to CSE, IT)	3	0	0	3
5 (Main core)	Wireless and Mobile Networks	3	0	0	3
6	Elective - I	3	0	0	3
PRACTICAL					
1	Assembly Language Programming Lab (Common to CSE, IT)	0	0	4	2
2	Java Programming Lab (Common to CSE, IT)	0	0	4	2
3	Case Tools lab (Common to CSE, IT)	0	0	4	2
		18	1	12	25

SEMESTER VI**(Applicable to the students admitted from the Academic year 2012-2013 onwards)**

Code No.	Course Title	L	T	P	C
THEORY					
1 (Main core)	Cryptography & Network Security (Common to CSE, IT)	3	0	0	3
2 (Main core)	Web Technology (Common to CSE, IT)	3	0	0	3
3 (Main core)	Advanced Java Programming (Common to CSE, IT)	3	0	0	3
4 (Main core)	Cloud Computing	3	0	0	3
5(Main core)	Service Oriented Architecture	3	0	0	3
6	Elective - II	3	0	0	3
PRACTICAL					
1	Advanced Java Programming Lab (Common to CSE, IT)	0	0	4	2
2	Web Technology Lab (Common to CSE, IT)	0	0	4	2
3	Service Oriented Architecture Lab	0	0	4	2
TOTAL		18	0	12	24

SEMESTER VII**(Applicable to the students admitted from the Academic year 2012-2013 onwards)**

Code No.	Course Title	L	T	P	C
THEORY					
1 (Industry core)	Business intelligence & Its Applications (Common to CSE,IT)	3	0	0	3
2(allied core)	Engineering Management and Ethics (Common to All branches)	3	0	0	3
3 (Main core)	Information Security (Common to CSE, IT,ECE, EEE, EIE & BME)	3	0	0	3
4(Main core)	Software Testing (Common to CSE, IT)	3	0	0	3
5(Main core)	C # & .Net Frame work (Common to CSE, IT)	3	0	0	3
6 (Elective)	Elective – III	3	0	0	3
PRACTICAL					
1	Software Testing Lab (Common to CSE, IT)	0	0	4	2
2	C # & .Net Frame work Lab (Common to CSE, IT)	0	0	4	2
3	Mini Project	0	0	12	6
TOTAL		18	0	20	28

SEMESTER VIII
(Applicable to the students admitted from the Academic year 2012-2013 onwards)

Code No.	Course Title	L	T	P	C
THEORY					
1 (Elective)	Elective – IV	3	0	0	3
2 (Elective)	Elective – V	3	0	0	3
3 (Elective)	Elective – VI	3	0	0	3
PRACTICAL					
1	Project Work	0	0	24	12
TOTAL		9	0	24	21

LIST OF ELECTIVES FOR
B.Tech-Information Technology

Sl No.	Code no	Course Title	Dept. Offering the course	L	T	P	C
1.		Cyber Security (Common to CSE & IT)		3	0	0	3
2.		Open Source Systems (Common to CSE & IT)		3	0	0	3
3.		Building Enterprise Application (Common to CSE & IT)		3	0	0	3
4.		Grid Computing (Common to CSE & IT)		3	0	0	3
5.		Advanced Database Technology (Common to CSE & IT)		3	0	0	3
6.		Intellectual Property Rights (Common to CSE & IT)		3	0	0	3
7.		TCP / IP Technology (Common to CSE & IT)		3	0	0	3
8.		Soft Computing (Common to CSE & IT)		3	0	0	3
9.		Design and analysis of algorithms (Common to CSE & IT)		3	0	0	3
10.		Total Quality Management (Common to CSE & IT)		3	0	0	3
11.		Visual Programming (Common to CSE & IT)		3	0	0	3
12.		User Interface Design (Common to CSE & IT)		3	0	0	3
13.		Theory of Computation		3	0	0	3
14.		Enterprise Resource Planning		3	0	0	3
15.		Distributed Systems		3	0	0	3
16.		Data Warehousing and Mining		3	0	0	3
17.		Remote Infrastructure Management		3	0	0	3
18.		Digital Image Processing		3	0	0	3
19.		Management Information System	MGT	3	0	0	3
20.		RUBY Programming		3	0	0	3
21.		Artificial Intelligence		3	0	0	3
22.		Embedded Systems		3	0	0	3
23.		Software Project Management		3	0	0	3
24.		Network Programming and Management		3	0	0	3
25.		Adhoc and Sensor Networks		3	0	0	3
26.		Research Practice And Technical Writing		0	0	4	2

YEAR I	L	T	P	C
SEMESTER I	3	0	0	3

ENGLISH FOR EFFECTIVE COMMUNICATION

(COMMON TO ALL BRANCHES)

UNIT - I 9

Word formation with prefixes and suffixes, Antonyms & Synonyms - Tense Forms - Different kinds of Nouns and Pronouns - Use of Verbs and Adverbs - Adjectives - Sentence Pattern (SVOCA) - Conditional Sentences - Auxiliary and Modal verbs - Articles.

UNIT - II 9

Phonetics (Vowels, Consonants and Diphthongs) - Pronunciation Guidelines - Vocabulary (Homophones).

UNIT - III 9

Principles of Communication - Defining and Describing Objects - Listening for Information and Making Inferences - Understanding Ideas and Making Inferences.

UNIT - IV 9

How to write reports, report writing - Recommendations - Discussing data and coming to conclusions - Rearranging the jumbled sentences.

UNIT - V 9

Skimming - Scanning - Flowcharts - Pie-charts - Formal and Informal letters - Resume Writing.

Total: 45 hours

TEXT BOOK

1. English for Effective Communication, Departments of English, VMKV & AVIT. Erode: SCM Publishers, 2009.

REFERENCE BOOKS

1. M.Ashraf Rizvi, Effective Technical Communication. New Delhi: Tata McGraw Hill Publications, 2007.
2. Pickett and Laster. Technical English: Writing, Reading and Speaking. New York: Harper and Row Publications, 2002.
3. Cutts, Martin. The Plain English Guide - How to Write Clearly and Communicate Better. New Delhi: Oxford University Press, 1995.
4. Narayanaswami.V.R. Strengthen Your Writing. Chennai: Orient Longman Ltd., 1996.
5. Prof.K.R.Lakshmi Narayanan & Dr.T.Murugavel, Communication Skills for Engineers, Chennai: SCI Publications, 2002.

YEAR I	L	T	P	C
SEMESTER I	3	0	1	4

ENGINEERING MATHEMATICS-I

(Common to MECH, ECE, CSE, CSSE, EEE, EIE, CIVIL, IT, MECHTRONICS, AERONAUTICAL, ETC & AUTO-MOBILE)

UNIT I - MATRICES 9

Characteristic equation - Eigen values and eigenvectors of a real matrix - Properties of eigenvalues and eigenvectors (Without proof) - Cayley-Hamilton theorem (excluding proof) - Orthogonal transformation of a symmetric matrix to diagonal form.

UNIT II - DIFFERENTIAL CALCULUS 9

Curvature - Cartesian and Parametric Co-ordinates - Centre and radius of curvature - Circle of curvature - Evolute

UNIT III - FUNCTIONS OF SEVERAL VARIABLES 9

Partial Derivatives - Total Differential - Maxima and Minima - constrained Maxima and Minima by Lagrangian Multiplier Method.

UNIT IV - LAPLACE TRANSFORMS 9

Laplace transform - transform of elementary functions - basic properties - derivatives and integrals of transforms - transforms of derivatives and integrals - initial and final value theorems - Transform of periodic functions.

UNIT V - APPLICATIONS OF LAPLACE TRANSFORMS 9

Inverse Laplace transform - Convolution theorem - Initial and Final value theorem - Solution of linear ODE of second order with constant coefficients and first order simultaneous equation with constant coefficients using Laplace transforms.

Total hours : 60

Lecture Hours : 45

Tutorial Hours : 15

TEXT BOOKS

1. "Engineering Mathematics" by Department of Mathematics, VMU
2. Veerarajan, T., "Engineering Mathematics", Tata McGraw Hill Publishing Co., NewDelhi, 2006.
3. Dr.A .Singaravelu , Engineering Mathematics Volume I & Volume II by Meenakshi Publications.

REFERENCE BOOKS

1. Grewal, B.S., "Higher Engineering Mathematics" (36th Edition), Khanna Publishers, Delhi 2001.
2. Kreyszig, E., "Advanced Engineering Mathematics" (8th Edition), John Wiley and Sons (Asia) Pvt Ltd., Singapore, 2001.
3. Kandasamy .P., Thilagavathy. K., and Gunavathy. K., "Engineering Mathematics",
4. Volumes I & II (4th edition), S.Chand & Co., New Delhi., 2001.

YEAR I	L	T	P	C
SEMESTER I	3	0	0	3

COMPUTER FOUNDATION PROGRAM

(COMMON TO ALL BRANCHES)

UNIT I - Basics of Computer and Information Technology

9

Digital computer fundamentals-Block diagram of a computer-component of a computer system Hardware and software definitions-Categories of software-Bootting-Installing and Uninstalling Software-Software piracy-Software terminologies-Application of Computer-Role of Information Technology-History of Internet-Internet Services.

UNIT II - Problem Solving Methodologies and Techniques

9

Problems solving Techniques-Program development cycle-Algorithm-Design-Flow chart-Program control structures-Types and generation of programming languages-Development of algorithms for simple problems. Top down and Bottom up approaches of software development.

UNIT III - Basics of Computer Architecture and System Software

9

Fundamentals of Computer Architecture-Introduction-Organization of a small computer Central Processing Unit-Execution cycle-Instruction categories - measure of CPU performance Memory-Input/output devices-BUS-addressing modes. System Software-Assemblers-Loaders and linkers-Compilers and interpreters.

UNIT IV - Basics of Operating System and DBMS

9

Introduction-Basics of memory management schemes-Scheduling-threads. Introduction to File and Database systems- SQL-DDL statements-DML statements-DCL statements.

UNIT V - Software Applications

9

Office Automation: Application Packages-word processing-Spread sheet Application and Basics of HTML.

Total: 45 hours

YEAR I	L	T	P	C
SEMESTER I	3	0	0	3

**ENVIRONMENTAL SCIENCE AND ENGINEERING
(COMMON TO ALL BRANCHES)**

UNIT - I - ENVIRONMENT AND NATURAL RESOURCES
9

Environment - Definition , scope & importance - Public awareness - Forest resources , mineral resources , water resources, food resources , energy resources (uses, over -exploitation & adverse effects in each case) - Scope & role of environmental engineers in conservation of natural resources - Sustainability development.

UNIT - II - ECOSYSTEMS AND BIO - DIVERSITY9

Ecosystem - Definition, structure and function - Energy flow - Ecological succession - food chain, food web, ecological pyramids - Introduction, types, characteristics, structure and function of forest, grassland, desert and Aquatic ecosystems - Bio - Diversity : values and uses, hotspots, threats and conservation.

UNIT - III - ENVIRONMENTAL POLLUTION 9

Pollution - Definition , man made impacts and control measures of air, water and land pollution - Water quality standards & characterization - Importance of sanitation -Nuclear hazards - Hazardous waste management : Solid waste, waste water and biomedical waste - Prevention of pollution and role of individual - Disasters management : Floods, earthquake, cyclone and land slides - Clean technology options.

UNIT - IV - SOCIAL ISSUES AND ENVIRONMENT 9

Urban problems related to energy - Water conservation - Resettlement and rehabilitation of people - Environmental ethics - Climate change - Global warming - Acid rain - Ozone depletion- Waste land reclamation , Environment Protection Act for air, water , wild life and forests - Pollution Control Board.

UNIT - V - HUMAN POPULATION AND ENVIRONMENT
9

Population growth - Population explosion - Family welfare programme - Environment & human health - Human rights - Value education - Women and child welfare, Role of information technology in environment and human health.

Total: 45 hours

TEXT BOOKS :

YEAR I	L	T	P	C
SEMESTER I	3	0	0	3

**ENGINEERING PHYSICS
(COMMON TO ALL BRANCHES)**

UNIT - I LASERS 9

Einstein coefficients (A&B), Nd - YAG laser, CO2 laser, semiconductor laser (homojunction) - uses of lasers - Holography - construction and reconstruction of a hologram.

UNIT - II FIBRE OPTICS 9

Principle and propagation of light in optical fibres - numerical aperture and acceptance angle - types of optical fibres (material, refractive index, mode) - Applications: Fibre optic communication system (block diagram only) - fibre optic sensors (displacement sensor and pressure sensor).

UNIT - III CRYSTAL PHYSICS 9

Lattice - unit cell - Bravais lattice - Lattice planes - Miller indices - "d" spacing in cubic lattice - calculation of number of atoms per unit cell - atomic radius - coordination number - packing factor for SC, BCC, FCC, HCP structures.

UNIT - IV ACOUSTICS 9

Classification of sound - characteristics of musical sound - loudness - Weber-Fechner law - decibel - absorption coefficient - experimental determination - reverberation - reverberation time - Sabine's formula (no derivation) - factors affecting acoustics of buildings (reverberation time, loudness, focusing, echo, echolen effect, resonance and noise) and their remedies.

UNIT - V NON - DESTRUCTIVE TESTING 9

Liquid penetrant method - ultrasonic flaw detection - ultrasonic flaw detector (block diagram) - X-ray Radiography: displacement method - X-ray Fluoroscopy - merits and demerits of each method.

Total: 45 hours

4. Arumugam M, "Engineering Physics", Anuradha Agencies, Kumbakonam, Second Edition (2005).

YEAR I	L	T	P	C
SEMESTER I	3	0	0	3

**BASIC CIVIL & MECHANICAL ENGINEERING
(COMMON TO ECE, EIE, EEE, ETC, CSE, IT, CSSE,
MECT& BME)**

a) CIVIL ENGINEERING

UNIT-I: SURVEYING AND CIVIL ENGINEERING MATERIALS 8

Surveying: Objects - types - classification - principles - measurements of distances - angles - Leveling - determination of areas - illustrative examples. Civil Engineering Materials: Bricks - stones - sand - cement - concrete - steel sections.

UNIT-II: BUILDING COMPONENTS AND STRUCTURES 8

Foundations: Types, Bearing capacity - Requirement of good foundations. Superstructure: Brick masonry - stone masonry - beams - columns - lintels - roofing - flooring - plastering - Types of Bridges and Dams - Basics of Interior Design and Landscaping.

UNIT-III: BASICS OF ENGINEERING MECHANICS 7

Mechanics - Internal and external forces - stress - strain - elasticity - Centroid - Centre of Gravity - Simple problems - Moment of Inertia - Simple Problems.

b) MECHANICAL ENGINEERING

UNIT-IV: POWER PLANT ENGINEERING 8

Introduction, Classification of Power Plants - Working principle of steam, Gas, Diesel, Hydroelectric and Nuclear Power plants - Merits and Demerits - Pumps and turbines - working principle of Reciprocating pumps (single acting and double acting) - Centrifugal Pump.

UNIT-V: IC ENGINES 8

Internal combustion engines as automobile power plant - Working principle of Petrol and Diesel Engines - Four stroke and two stroke cycles - Comparison of four stroke and two stroke engines - Boiler as a power plant.

UNIT-VI : REFRIGERATION AND AIR CONDITIONING SYSTEM 7

Terminology of Refrigeration and Air Conditioning. Principle of vapour compression and absorption system - Layout of typical domestic refrigerator - Window and Split type room Air conditioner.

TOTAL: 46 PERIODS

YEAR I	L	T	P	C
SEMESTER I	0	0	4	2

ENGINEERING PHYSICS LAB
(Common to all Branches)

List of Experiments

1. Young's modulus of a bar - Non-uniform bending
2. Rigidity modulus of a wire - Torsional Pendulum
3. Viscosity of a liquid - Poiseuille's method
4. Velocity of ultrasonic waves in liquids - Ultrasonic Interferometer
5. Particle size determination using Laser
6. Wavelength of spectral lines - grating - Spectrometer
7. Thickness of a wire - Air wedge Method
8. Thermal conductivity of a bad conductor - Lee's disc
9. Band gap determination of a thermistor - Post Office Box
10. Specific resistance of a wire - Potentiometer

YEAR I	L	T	P	C
SEMESTER I	0	0	4	2

WORKSHOP PRACTICE

(Common to MECH, ECE, CSE, CSSE, EEE, EIE, CIVIL,
IT, MECHTRONICS, AERONAUTICAL, ETC & AUTO-
MOBILE)

FITTING

1. Vee Joint
2. Square Joint
3. Dove Tail Joint

CARPENTRY

1. Planning
2. Half lab
3. Dove Tail Joint

WELDING

1. Arc Welding of butt Joint.
- 2 Arc Welding of Lap Joint

DEMONSTRATION

1. Sheet Metal - Fabrication of tray and cone
2. Black Smithy - Round to square rod.
3. Foundry - Mould Preparation using single piece and split pattern

REFERENCE

1. "Basic Workshop Practice ", Department of Mechanical Engineering, VMKV Engineering College, 2008

YEAR I	L	T	P	C
SEMESTER I	0	0	4	2

COMPUTER FOUNDATION PROGRAM LAB

(Common to all Branches)

I. OFFICE AUTOMATION

1. Create a document with all formatting effects.
2. Create a document to send mails using mail merge option.
3. Create an Excel File to analyze the student's performance. Create a chart for the above data to depict it diagrammatically.
4. Create Excel sheet to maintain employee information and use this data to send mails using mail merge.
5. Create a Power Point presentation for your personal profile with varying animation effects with timer.

II. SQL QUERIES

1. Write SQL Commands for Data Definition, Table Creation with constraints.
2. Write SQL Commands for Insert, Select, Update and Delete operations.
3. Write SQL Commands for aggregate functions.

III. HTML

1. Write HTML code to develop a web page having the background in red and title "My First Page" in any other color.
2. Design a page having background color given text color red and using all the attributes of font tag.

3. Create a web page, when user clicks on the link it should go to the bottom of the page.
4. Create a web page, showing an ordered & unordered list of name of your five friends.
5. Create a web page with appropriate content and insert an image towards the left hand side of the page when user clicks on the image. It should open another web page.
6. Create a web page which should contain a table having two rows and two columns.

YEAR I	L	T	P	C
SEMESTER II	3	0	0	3

BUSINESS ENGLISH

(Common to all Branches)

UNIT - I 9

Subject and Verb Agreement (Concord) - Active and Passive Voice, Impersonal Passive Voice - Preposition - Common Errors - Direct Speech and Indirect Speech - Cause and Effect - Phrasal Verbs and Idioms and Phrases - Question Tags - Vocabulary.

UNIT - II 9

Stress (Word Stress and Sentence Stress) - Intonation - Differences in British and American English - Indianism.

UNIT - III 9

Role Play - Telephonic Etiquettes - Interview Questions (Direct, Open-ended and Closed Questions) - E-mail Netiquette, Sample E-mails.

UNIT - IV 9

Instruction - Check-list - Minutes of the Meeting and Writing Agenda - Note making.

UNIT - V 9

Reading Comprehension - Interpreting Tables - Bar charts - Business Letters (Calling for Quotation, Placing Orders and Complaint Letters) - Essay Writing and Developing Hints.

Total: 45 hours

YEAR I	L	T	P	C
SEMESTER II	3	0	0	3

ENGINEERING MATHEMATICS - II

(Common to MECH,ECE,CSE,
CSSE,EEE,EIE,CIVIL,IT,MECHTRONICS,AERONAUTICAL
,ETC & AUTOMOBILE)

UNIT I - ORDINARY DIFFERENTIAL EQUATIONS 9

Solutions of third and higher order linear ordinary differential equation with constant coefficients - Method of variation of parameters - Cauchy's and Legendre's linear equations - Simultaneous first order linear equations with constant coefficients.

UNIT II - MULTIPLE INTEGRALS 9

Double integration -change of order of integration- Cartesian and polar coordinates -Area as a double integral - Triple integration - volume as a triple integral.

UNIT III - VECTOR CALCULUS 9

Directional derivatives - Gradient, Divergence and Curl - Irrotational and solenoidal- vector fields - vector integration - Green's theorem, Gauss divergence theorem and Stoke's theorem (excluding proof).

UNIT IV - ANALYTIC FUNCTIONS 9

Function of a complex variable - Analytic function - Necessary conditions - Cauchy Riemann equations - Sufficient conditions (excluding proof) - Harmonic conjugate-Constructions of analytic functions-conformal mapping($w=z+c$, $w=z^2$, $w=1/z$)-bilinear transformation

UNIT V - COMPLEX ANALYSIS 9

Statement and application of Cauchy's integral theorem and integral formula - Taylor's and Laurent's expansions -Residues - Cauchy's residue theorem-contour integration over unit circle.

Total hours: 60

Lecture Hours: 45

Tutorial Hours: 15

YEAR I	L	T	P	C
SEMESTER II	3	0	0	3

ENGINEERING CHEMISTRY
(Common to all Branches)

UNIT I - WATER TECHNOLOGY & CORROSION 9

Sources of water - impurities - Hardness and its determination (problems to be avoided) - boiler troubles - water softening (zeolite & Demineralisation) - Domestic water treatment - Desalination (Electrodialysis & Reverse Osmosis). Corrosion - Types - principles - corrosion control methods (Sacrificial and Impressed current method).

UNIT II - ELECTROCHEMISTRY, BATTERIES AND FUEL CELLS 9

Ostwald Law and Debye Huckle's law - Cells - Electrode (SHE, Calomel and Glass) - Electrode potential - Nernst equation - EMF series. Primary cells - secondary batteries - charging and discharging.

UNIT III - CHEMISTRY OF ADVANCED MATERIALS 9

Portland cement - setting and hardening - RCC - Special cements. Organic electronic material, solid oxide materials, shape memory alloys, nanomaterials, polymers, fullerenes, ceramics, fibers, lubricants, refractories & composites (definition, classification and applications)

UNIT IV - PHASE EQUILIBRIA & NUCLEAR CHEMISTRY 9

Phase rule: statement and explanation of terms involved - One component system - Condensed phase rule - Two component system. Nuclear Chemistry - Fission - Fusion - working of nuclear reactor - Radiations and harmful effects.

UNIT V - CHROMATOGRAPHY AND SPECTROSCOPY 9

Chromatography -- classification & principles (Paper, column, thin layer, gas, HPLC). Spectroscopy - Electromagnetic radiation - Beer Lambert's law - UV - Visible - IR (Principle and Instrumentation, block diagram) - Atomic absorption spectroscopy.

Total: 45 hours

Text Book:

1. Engineering Chemistry by Jain & Jain, 15th Edition, Dhanpat Rai Publishing Company (P) Ltd., New Delhi.

Reference Book:

1. A Text Book of Engineering Chemistry by Shashi Chawla, Edition 2012, Dhanpat Rai & Co, New Delhi.
2. A Text Book of Engineering Chemistry by S.S.Dara, S.Chand & Company Ltd, New Delhi.
3. Engineering Chemistry by Dr.Ravikrishna, Krishna Publications, Chennai.

YEAR I	L	T	P	C
SEMESTER II	3	0	0	3

PROGRAMMING IN C
(Common to all Branches)

UNIT I **9**

Introduction: Algorithms & flowcharts-Overview of C-Features of C-IDE of C Structure of C program-Compilation & execution of C program-Identifiers, variables, expression, keywords, data types, constants, scope and life of variables, local and global variables. Operators: arithmetic, logical, relational, conditional and bitwise operators- Special operators: size of () & comma (,) operator-Precedence and associativity of operators & Type conversion in expressions. Basic input/output and library functions: Single character input/output i.e. getch(), getchar(), getche() & putchar()-Formatted input/output: printf() and scanf()-Library Functions: concepts, mathematical and character functions.

UNIT II **9**

Control structures: Conditional control-Loop control and Unconditional control structures. Functions: The Need of a function-User defined and library function- Prototype of a function-Calling of a function-Function argument-Passing arguments to function-Return values-Nesting of function- main()-Command line arguments and recursion. Storage class specifier - auto, extern, static, & register.

UNIT III **9**

Arrays: Single and multidimensional arrays-Array declaration and initialization of arrays-Array as function arguments. Strings: Declaration-Initialization and string handling functions. Structure and Union: Defining structure-Declaration of structure variable-Accessing structure members-Nested structures-Array of structures-Structure assignment-Structure as function argument-Function that returns structure- Union.

UNIT IV **9**

Pointers: The "&" and "*" operators-Pointers expressions-Pointers vs arrays-Pointer to functions-Function returning pointers-Static and dynamic memory allocation in C. DMA functions: malloc(), calloc(), sizeof(), free() and realloc()-Preprocessor directives.

UNIT V **9**

File management: Defining, opening & closing a file, text file and binary file- Functions for file handling: fopen, fclose, gets, puts, fprintf, fscanf, getw, putw, fputs, fgets, fread, fwrite-Random access to files: fseek, ftell, rewind-File name as Command Line Argument.

YEAR I	L	T	P	C
SEMESTER II	3	1	0	4

**BASIC ELECTRICAL AND ELECTRONICS
ENGINEERING (Common to
ECE, ETCE, MECHT, BME, BT, BF, EEE, EIE, CSE, IT, CSSE
AND CIVIL)**

a) ELECTRICAL ENGINEERING

UNIT I **8**

Electrical Circuits & Meters

Definition of electromotive force, current, power and energy- International System of units-Ohm's law and Kirchhoff's laws- solution of series and parallel Circuits. Generation of alternating voltage-average and RMS values-solution of simple R, RL, RC and RLC circuits- Calculation of power and power factor in AC circuits. Construction and principles of operation of moving coil, moving iron and dynamometer instruments.

UNIT II **8**

DC Machines (Qualitative Treatment Only)

Dc machines -parts-DC generator-EMF equation-Different types of DC generators and their applications-DC motors and their applications-different types -speed control-Starters.

UNIT III **7**

AC Machines (Qualitative Treatment Only)

Construction & principle of operation of transformers-Single phase & Three phase transformers-Construction and operation of AC motors-Single phase and three phase Induction motors-applications-construction, principles of operation and application of synchronous motors.

b) ELECTRONICS ENGINEERING

UNIT I: SEMICONDUCTOR DEVICES AND APPLICATIONS **8**

Passive and Active Components - Resistors, Inductors, Capacitors, Characteristics of PN Junction Diode - Zener Effect - Zener Diode and its Characteristics - Half wave and Full wave Rectifiers - Voltage Regulation. Bipolar Junction Transistor - CB, CE, CC Configuration and Characteristics.

UNIT II: FUNDAMENTALS OF COMMUNICATION ENGINEERING **8**

Types of Signals: Analog and Digital Signals - Modulation and Demodulation: Principles of Amplitude Modulation, Angle Modulation, Pulse Amplitude Modulation, Pulse Width Modulation and Pulse Code Modulation Communication Systems: Radio, High Definition TV, MODEM, Fax, Microwave, Radar, Satellite and Optical Fibre, Mobile-Cellphones (block diagram description only).

UNIT III : STUDY OF ADVANCED ELECTRONIC GADGETS **7**

High Definition Camera, High Definition Video Camera, Tablet PC, Android Phones, iPods, Video Game Consoles

SEMESTER II	3	1	0	4

FUNDAMENTALS OF ALGORITHM (Common to CSE, IT, CSSE & M.Sc(SE))

OBJECTIVE : To study a broad variety of important and useful algorithms-methods for solving problems that are suited for computer implementation

OUTCOME : Do enable the student to learn the major components of a computer system, the correct and efficient ways of solving problems and to learn the use office automation tools.

UNIT I INTRODUCTION TO COMPUTER PROBLEM SOLVING

Introduction - The Problem-Solving aspect, top-down design-Implementation of Algorithms-program verification-The efficiency of algorithms-The analysis of algorithms-Fundamental Algorithms: Introduction-Exchanging the values of two variables-Counting-Summation of a set of Numbers-factorial computation-Sine function computation-Generation of the Fibonacci sequence-Reversing the digits of an integer, base conversion-Character to Number conversion.

UNIT II FACTORING METHOD

Introduction - Finding the square root of a number-The smallest divisor of an integer-The greatest common divisor of two integers-Generating Prime Numbers-Computing the Prime Factors of an integer-Generation of Pseudo-random Numbers-Raising a Number to a Large Power-Computing the nth Fibonacci Number.

UNIT III ARRAY TECHNIQUES

Introduction - Array Order Reversal-Array Counting or Histogramming-Finding the maximum Number in a Set-Removal of Duplicates from an Ordered Array-Partitioning an Array-Finding the kth smallest Element-Longest Monotone Subsequence.

UNIT IV MERGING SORTING AND SEARCHING

Introduction - The Two-way Merge-Sorting by Selection-Sorting by Exchange-Sorting by Insertion-Sorting by Diminishing Increment-Sorting by Partitioning-Binary Search-Hash Searching.

UNIT V TEXT PROCESSING AND PATTERN SEARCHING

Introduction -Text Line Length Adjustment-Left and Right Justification of Text-KeyWord Searching in Text-Text Line Editing-Linear Pattern search- Sublinear Pattern Search.

ENGINEERING CHEMISTRY LAB

(Common to all Branches)

1. Estimation of total hardness of water sample by EDTA method.
2. Determination of alkalinity by indicator method.
3. Estimation of ferrous ion by Potentiometry.
4. Titration of strong acid with strong base by Conductometry.
5. Acid base reaction by pH metry.
6. Estimation of copper from its ore.
7. Estimation of iron by spectrophotometer.
8. Estimation of sodium by flame photometer.

YEAR I	L	T	P	C
SEMESTER II	0	0	4	2

**BASIC ELECTRICAL AND ELECTRONICS
ENGINEERING LAB (Common to ECE, ETCE, MECHT,
BME, BT, BF, EEE, EIE, CSE, IT, CSSE AND CIVIL)**

a) ELECTRICAL ENGINEERING LAB

LIST OF EXPERIMENTS

1. Residential house wiring using switches, fuse, indicator, lamp and energy meter.
2. Fluorescent lamp wiring.
3. Stair case wiring
4. Measurement of electrical quantities - voltage, current, power & power factor in RLC circuit.
5. Measurement of energy using single phase energy meter.
6. Measurement of resistance to earth of an electrical equipment.

B) ELECTRONICS ENGINEERING LAB

1. Familiarization with Electronic Components like R, L, C and active devices.
2. Familiarization with Bread board, CRO, Power supply (RPS, FPS) and Soldering Practice.
3. Generation of lissajous patterns using CRO.
4. Measurement of amplitude and time period using CRO.
5. Study of the Characteristic of PN-Junction diode with its applications.
6. Study of the Characteristic of Zener diode with its applications
7. Study of the rectifier circuits (Half wave and Full Wave) with its applications.
8. Study of BJT Characteristics with its applications.
9. Study of AM/FM Receiver.
10. Study of advanced electronic gadgets.

YEAR I	L	T	P	C
SEMESTER II	0	0	4	3

**PROGRAMMING IN C
(Common to all Branches)**

1. Implementation of Sine and cosine series.
2. Generation of Fibonacci series.
3. To find the i) Factorial number.
ii) Sum of n natural numbers.
4. Reversing the digits of an integer
5. Conversion of decimal number to octal number
6. Conversion of character integer to decimal number
7. Finding the square root of a given number by applying algorithm
8. (a) Find GCD of two numbers
(b) Generate Prime numbers between 1 and n.
9. Greatest of three numbers using if statement and conditional operator.
10. Read two numbers and swap those two numbers using temporary variable and without using temporary variable.
11. Quadratic equation for different sets of inputs.
12. Use of switch...Case statements.
13. Matrix operations
 - a) Addition
 - b) Transpose
 - c) Multiplication
14. Ascending and descending order.
15. Given a set of n numbers, find the length of the longest monotone increasing subsequence.

16. Sort by exchange, selection and partitioning method
17. Use of pointers and array of pointers
18. Linear search.
19. Binary search.
20. Files operations.

YEAR II	L	T	P	C
SEMESTER III	3	1	0	4

ADVANCED ENGINEERING MATHEMATICS

(Common to CIVIL, MECH, MECHAT,AUTO, AERO, ECE, EEE, CSE, EIE, IT)

OBJECTIVES:

- ◆ Partial differential equations arises in most of the Engineering discipline when the number of independent variables in the given problem under discussion is two or more.
- ◆ Fourier series is used to express even aperiodic functions in terms of periodic functions making them amenable for further processing.
- ◆ Fourier series has the wide application in the field of heat diffusion, wave propagation and in signal and systems analysis.
- ◆ Transform techniques are very useful in the field of signal and system analysis.
- ◆ Z - transform plays an important role in analysis of Discrete signals. This is a prelude to learn higher semester courses.

1. PARTIAL DIFFERENTIAL EQUATIONS 9

Formation - Solutions of standard types $f(p,q)=0$, Clairauts form, $f(z,p,q)=0$, $f(p,x)=g(q,y)$ of first order equations - Lagrange's Linear equation - Linear partial differential equations of second and higher order with constant coefficients.

2. FOURIER SERIES 9

Dirichlet's conditions - General Fourier series - Half-range Sine and Cosine series - Parseval's identity - Harmonic Analysis.

3. BOUNDARY VALUE PROBLEMS 9

Classification of second order linear partial differential equations - Solutions of one - dimensional wave equation, one-dimensional heat equation - Steady state solution of two-dimensional heat equation - Fourier series solutions in Cartesian coordinates.

4. FOURIER TRANSFORMS 9

Statement of Fourier integral theorem - Fourier transform pairs - Fourier Sine and Cosine transforms - Properties - Transforms of simple functions - Convolution theorem - Parseval's identity.

5. Z - TRANSFORM 9

Z-Transform - Elementary Properties - Inverse Z-Transform - Convolution Theorem - Formation of Difference Equations - Solution of Difference Equations using Z-Transform.

Tutorial : 15

SEMESTER III	3	1	0	4

DIGITAL ELECTRONICS

(Common for ECE/ MECHAT/CSE/IT/ EEE/EIE)

AIM

The Aim of this course is to develop a strong foundation in analysis and design of digital electronics.

OBJECTIVES:

1. Understand the basic concepts.
2. Understand concepts of logic gates constructional features.
3. To understand the concepts of gate-level minimization & combinational logic.
4. To analyze synchronous sequential logic.
5. To realize the hazard free circuits and pulse mode sequential Circuits.

UNIT I BASIC COCEPTS AND BOOLEAN ALGEBRA

9

Number systems - Binary, Octal, Decimal, Hexadecimal, conversion from one to another, complement arithmetic, Boolean theorems of Boolean algebra, Sum of products and product of sums, Minters and Maxterms, Karnaugh map, Tabulation and computer aided minimization procedures.

UNIT II LOGIC GATES 9

RTL, DTL, TTL, ECL, ICL, HTL, NMOS & CMOS logic gates, Circuit diagram and analysis characteristics and specifications, tri-state gates.

UNIT III COMBINATIONAL CIRCUITS 9

Problem formulation and design of combinational circuits, Adder / Subtractor, Encoder / decoder, Mux / Demux, Code-converters, Comparators, Implementation of combinational logic using stan-

standard ICs, ROM, EPROM, EEPROM, Basics of PLD, PAL, PLA and their use in combinational circuit design.

UNIT IV SEQUENTIAL CIRCUITS 9

Flip flops - SR, JK, T, D, Master/Slave FF, Triggering of FF, Analysis of clocked sequential circuits - their design, State minimization, state assignment, Circuit implementation, Registers-Shift registers, Ripple counters, Synchronous counters, Timing signal, RAM, Memory decoding, Semiconductor memories.

UNIT V FUNDAMENTAL MODE SEQUENTIAL CIRCUITS 9

Stable, Unstable states, Output specifications, Cycles and Races, Race free Assignments, Hazards, Essential hazards, Pulse mode sequential circuits.

SEMESTER III	3	0	0	3

DATA STRUCTURES

(Common for CSE, IT, EEE, EIE, ECE, MECT, BME)

AIM:

The aim is to introduce the concept of storage of data using list, stack, queue

OBJECTIVES:

- ◆ To introduce the concepts of Advanced Data Structures.
- ◆ To introduce the concepts of Tree

Unit I LINEAR STRUCTURES 9

Abstract Data Types (ADT) - List ADT - array-based implementation - linked list implementation - cursor-based linked lists - doubly-linked lists - applications of lists - Stack ADT - Queue ADT - circular queue implementation - Applications of stacks and queues

Unit II TREE STRUCTURES 9

Tree ADT - tree traversals - left child right sibling data structures for general trees - Binary Tree ADT - expression trees - applications of trees - binary search tree ADT - Threaded Binary Trees.

Unit III BALANCED TREES 9

AVL Trees - Splay Trees - B-Tree - heaps - binary heaps - applications of binary Heaps

Unit IV HASHING AND SET 9

Hashing - Separate chaining - open addressing - rehashing - extendible hashing - Disjoint Set ADT - dynamic equivalence problem - smart union algorithms - path compression - applications of Set

Unit V GRAPHS

9

Definitions - Topological sort - breadth-first traversal - shortest-path algorithms - minimum spanning tree - Prim's and Kruskal's algorithms - Depth-first traversal - biconnectivity - Euler circuits - applications of graphs

Total: 45

OBJECT-ORIENTED PROGRAMMING (Common to CSE, IT, EEE, ECE, BME, EIE)

AIM:

To implement and manipulate object oriented programming concepts

OBJECTIVES:

- ◆ To implement the concepts of object oriented programming.
- ◆ To implement oops structures using object oriented programming language.
- ◆ To use standard template library in the implementation oops data structures

UNIT I

9

Object oriented programming concepts - objects - classes - methods and messages - abstraction and encapsulation - inheritance - abstract classes - polymorphism. Introduction to C++ - classes - access specifiers - function and data members - default arguments - function overloading - friend functions - const and volatile functions - static members - Objects - pointers and objects - constant objects - nested classes - local classes

UNIT II

9

Constructors - default constructor - Parameterized constructors - Constructor with dynamic allocation - copy constructor - destructors - operator overloading - overloading through friend functions - overloading the assignment operator - type conversion - explicit constructor

UNIT III

9

Function and class templates - Exception handling - try-catch-throw paradigm - Exception specification - terminate and Unexpected functions - Uncaught exception.

UNIT IV **9**

Inheritance - public, private, and protected derivations - multiple inheritance - virtual base class - abstract class - composite objects Runtime polymorphism - virtual functions - pure virtual functions - RTTI - typeid - dynamic casting - RTTI and templates - cross casting - down casting .

UNIT V **9**

Streams and formatted I/O - I/O manipulators - file handling - random access - object serialization - namespaces - std namespace - ANSI String Objects - standard template library.

YEAR II	L	T	P	C
SEMESTER III	3	0	0	3

COMPUTER ARCHITECTURE

(Common to CSE/ IT)

AIM:

To understand the organization of a computer, and the hardware-software interface.

OBJECTIVES:

- ◆ To know about the various components of a computer and their internals.
- ◆ To comprehend the importance of the hardware-software interface, and instruction set architecture.
- ◆ To understand the architectural features of superscalar processors.

UNIT I BASIC STRUCTURE OF COMPUTERS **9**

Functional units - Basic operational concepts - Bus structures - Software performance - Memory locations and addresses - Memory operations - Instruction and instruction sequencing - Addressing modes - Assembly language - Basic I/O operations - Stacks and queues.

UNIT II ARITHMETIC UNIT **9**

Addition and subtraction of signed numbers - Design of fast adders - Multiplication of positive numbers - Signed operand multiplication and fast multiplication - Integer division - Floating point numbers and operations.

UNIT III BASIC PROCESSING UNIT **9**

Fundamental concepts - Execution of a complete instruction - Multiple bus organization - Hardwired control - Microprogrammed control - Pipelining - Basic concepts - Data hazards - Instruction hazards - Influence on Instruction sets - Data path and control consideration - Superscalar operation.

UNIT IV MEMORY SYSTEM 9

Basic concepts - Semiconductor RAMs - ROMs - Speed - size and cost - Cache memories - Performance consideration - Virtual memory- Memory Management requirements - Secondary storage.

UNIT V I/O ORGANIZATION 9

Accessing I/O devices - Interrupts - Direct Memory Access - Buses - Interface circuits - Standard I/O Interfaces (PCI, SCSI, USB).

YEAR II	L	T	P	C
SEMESTER III	3	0	0	3

INTRODUCTION TO INFORMATION TECHNOLOGY

AIM

The subject aims to introduce various IT related concepts of current Interest. The subject focuses on important application areas of computing and Information Technologies.

OBJECTIVES

- ◆ The students will be able to understand the importance of IT in business environment and the technologies involved in knowledge engineering.
- ◆ The students will acquire basic knowledge about Internet, multimedia, virtual reality based concepts.
- ◆ The students will be exposed to the application areas of IT.

UNIT I IT IN THE BUSINESS ENVIRONMENT 9

Introduction: Business and Information Technology, Information Technologies in the Modern Organization, Information Technology for Multimedia Communication, Principles of Visual Information Analysis

UNIT II IT INFRASTRUCTURE 9

Computer Hardware, Computer Software, Managing Organizational Data and Information, Telecommunications and Networks, The Internet, Intranets, and Extranets

UNIT III APPLYING IT FOR COMPETITIVE ADVANTAGE 9

Functional, Enterprise, and Inter-organizational Systems, Electronic Commerce, Computer-Based Supply Chain Management and Information Systems Integration, Data, Knowledge, and Decision Support, Intelligent Systems in Business.

UNIT IV INFORMATIONAL AND ORGANIZATIONAL GOALS 9

Strategic Information Systems and Reorganization, Information Systems Development, Implementing IT: Ethics, Impacts and Security.

UNIT V

Important Application Areas 9

Issues & Challenges, IT in Healthcare & Telemedicine, Remote Sensing and GIS Techniques, Cybermediary Concepts, Principles and Applications of Soft Computing, Industrial information Technology, IT in Mining and Electrical Load Forecasting, Information Processing from Document Images, IT for Rural Development.

SEMESTER III	0	0	4	2

**DIGITAL ELECTRONICS LAB
(Common for ECE/CSE/IT/ EIE)**

Aim:

To provide the knowledge of design and implementation of digital circuits using logic gates and flip flops.

Objectives:

Designing the basic digital circuits like adders, subtractors, code converters, magnitude converters using logic gates and counters using flip flops.

List of Experiments:

1. Design and implementation of Adders using logic gates
2. Design and implementation of Subtractors using logic gates
3. Design and implementation of BCD to Excess -3 code converter using logic gates
4. Design and implementation of Binary to Gray code converter using logic gates
5. Design and implementation of 4 bit BCD adder using IC 7483
6. Design and implementation of 2 Bit Magnitude comparator using logic gates
7. Design and implementation of Multiplexer and De-Multiplexer using logic gates
8. Design and implementation of encoder and decoder using logic gates
9. Design and implementation of 3 bit synchronous up/down counter
10. Implementation of SISO, SIPO, and PISO shift registers using flip flops

YEAR II	L	T	P	C
SEMESTER III	0	0	4	2

DATA STRUCTURES LAB
(Common for CSE/ IT/ EEE/EIE)

Implement the following exercises using C++:

1. Exercises using Objects, Classes, Inheritance,
2. Operator Overloading and Polymorphism.
3. Array implementation of List Abstract Data Type (ADT)
4. Linked list implementation of List ADT
5. Cursor implementation of List ADT
6. Array implementations of Stack ADT
7. Linked list implementations of Stack ADT
8. Queue ADT
9. Search Tree ADT - Binary Search Tree
10. Heap Sort
11. Quick Sort

YEAR II	L	T	P	C
SEMESTER III	3	0	0	3

OBJECT-ORIENTED PROGRAMMING LAB
(Common for CSE, IT, EEE ,ECE,BME, EIE)

1. Design C++ classes with static members, methods with default arguments, friend functions. (For example, design matrix and vector classes with static allocation, and a friend function to do matrix-vector multiplication)
2. Implement complex number class with necessary operator over loadings and type conversions such as integer to complex, double to complex, complex to double etc.
3. Implement Matrix class with dynamic memory allocation and necessary methods. Give proper constructor, destructor, copy constructor, and overloading of assignment operator.
4. Overload the new and delete operators to provide custom dynamic allocation of memory.
5. Develop a template of linked-list class and its methods.
6. Develop templates of standard sorting algorithms such as bubble sort, insertion sort, merge sort, and quick sort.
7. Design stack and queue classes with necessary exception handling.
8. Define Point class and an Arc class. Define a Graph class which represents graph as a collection of Point objects and Arc objects. Write a method to find a minimum cost spanning tree in a graph.
9. Develop with suitable hierarchy, classes for Point, Shape, Rectangle, Square, Circle, Ellipse, Triangle, Polygon, etc. Design a simple test application to demonstrate dynamic polymorphism and RTTI.
10. Write a C++ program that randomly generates complex numbers (use previously designed Complex class) and writes them two per line in a file along with an operator (+, -, *, or /). The numbers are written to file in the format (a + ib). Write another program to read one line at a time from this file, perform the corresponding operation on the two complex numbers read, and write the result to another file (one per line).

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

PROBABILITY AND QUEUEING THEORY

(Common for CSE / IT)

OBJECTIVES:

The syllabus for the Probability and statistics has been framed catering to the needs of the Engineering students. It is purely application oriented. To mention a few (i) the theory of probability had its origin in gambling and games of chance. (ii) In the analysis of electrical systems, signal processing operations can be viewed as transformations of a set of input variables into a set of output variables. If these variables are random variables then we can use probability distribution. (iii) Markov Process and Markovian Queues will be helpful to students in learning and using other subjects

UNIT I PROBABILITY AND RANDOM VARIABLES 9

Probability concepts, Random variables, moments, Moment Generating function and their properties.

UNIT II STANDARD DISTRIBUTIONS 9

Binomial, Poisson, Geometric, Negative binomial, Uniform, Exponential, Gamma, Weibull distributions, Functions of random variable, Chebychev inequality

UNIT III TWO-DIMENSIONAL RANDOM VARIABLES 9

Marginal and conditional distributions, Covariance, Correlation and regression, Transformation of random variables, Central limit theorem

UNIT IV RANDOM PROCESSES, MARKOV CHAIN 9

Classification, Stationary process, Markov process, Binominal process, Poisson process, Birth and death process, Renewal process, Markov chain, Transition probabilities, Limiting distributions.

UNIT V QUEUEING THEORY 9

Markovian queueing models, Little's formula, M/M/1, M/M/C - finite and infinite capacity, M/G/1 Queues, Pollaczek-Khintchinev formula (Statement only)

Tutorial : 15

Total Hours : 60

Credits : 04

SOFTWARE ENGINEERING & QUALITY ASSURANCE

(Common for CSE / IT)

AIM:

The course is intended to give Software Engineering principles in classical sense.

OBJECTIVES:

- ◆ To be aware of generic models to structure the software development process.
- ◆ To understand fundamental concepts of requirements engineering and requirements specification.
- ◆ To understand different notion of complexity at both the module and system level.
- ◆ To be aware of some widely known design methods.
- ◆ To understand the role and contents of testing activities in different life cycle phases.

UNIT I SOFTWARE PROCESS 9

Introduction - S/W Engineering - Software Process - Linear Sequential Model- Prototyping Model-RAD Model-Evolutionary Software Process Models-Component Based Development

UNIT II SOFTWARE PROJECT PLANNING 9

Project Planning Objectives - Software Scope - Resources - Software Project Estimation - Empirical Estimation Models - Make/Buy Decision

UNIT III SOFTWARE QUALITY ASSURANCE 9

Quality Concepts - Quality Movement - Software Quality Assurance - Software Reviews - Formal Technical Reviews - Formal Approaches to SQA - Software Reliability - ISO 9000 Quality Standards - SQA Plan

UNIT IV DESIGN CONCEPTS AND PRINCIPLES 9

Design Process - Design Principles - Design Concepts - Effective Modular Design - Design Heuristics for Effective Modularity - Design Model - Design Documentation

UNIT V SOFTWARE TESTING 9

Software Testing Fundamentals - Test Case Design - White Box Testing - Black Box Testing - Unit Testing - Integration Testing - Validation Testing - System Testing

TOTAL: 45

TEXT BOOKS:

1. Roger S. Pressman, "Software Engineering - A practitioner's Approach", Fifth Edition, McGraw-Hill International Edition, 2005.

REFERENCES:

1. Watts S.Humphrey,"A Discipline for Software Engineering", Pearson Education, 2007.
2. James F.Peters and Witold Pedrycz,"Software Engineering, An Engineering Approach", Wiley-India, 2007.

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

OPERATING SYSTEMS (Common to CSE/ IT)

AIM:

The course introduces the students to the basic principles of operating systems.

OBJECTIVES:

- ◆ To be aware of the evolution of operating systems
- ◆ To learn what processes are, how processes communicate, how process synchronization is done and how to manage processes
- ◆ To have an understanding of the main memory and secondary memory management techniques.
- ◆ To understand the I/O Subsystem
- ◆ To have an exposure to Linux and Windows 2000 operating systems

UNIT I PROCESSES AND THREADS 9

Introduction to operating systems - review of computer organization - operating system structures - system calls - system programs - system structure - virtual machines. Processes: Process concept - Process scheduling - Operations on processes - Cooperating processes - Interprocess communication - Communication in client-server Systems. Case study: IPC in Linux. Threads: Multi-threading models - Threading issues. Case Study: Pthreads library

UNIT II PROCESS SCHEDULING AND SYNCHRONIZATION 10

CPU Scheduling: Scheduling criteria - Scheduling algorithms - Multiple-processor scheduling Real time scheduling - Algorithm Evaluation. Case study: Process scheduling in Linux. Process Synchronization: The critical-section problem - Synchronization hardware - Semaphores - Classic problems of

synchronization - critical regions - Monitors. Deadlock: System model - Deadlock characterization - Methods for handling deadlocks - Deadlock prevention - Deadlock avoidance - Deadlock detection - Recovery from deadlock.

UNIT III STORAGE MANAGEMENT 9

Memory Management: Background - Swapping - Contiguous memory allocation - Paging - Segmentation - Segmentation with paging. Virtual Memory: Background -Demand paging - Process creation - Page replacement - Allocation of frames - Thrashing. Case Study: Memory management in Linux

UNIT IV FILE SYSTEMS 9

File-System Interface: File concept - Access methods - Directory structure - File- system mounting - Protection. File-System Implementation : Directory implementation - Allocation methods - Free-space management - efficiency and performance - recovery - log-structured file systems. Case studies: File system in Linux - file system in Windows XP

UNIT V I/O SYSTEMS 8

I/O Systems - I/O Hardware - Application I/O interface - kernel I/O subsystem - streams - performance. Mass-Storage Structure: Disk scheduling - Disk management - Swap-space management - RAID - disk attachment - stable storage - tertiary storage. Case study: I/O in Linux.

Total: 45

3. Harvey M. Deital, "Operating Systems", Third Edition, Pearson Education, 2004

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

DATABASE MANAGEMENT SYSTEMS

(Common to CSE/ IT)

AIM:

To provide a strong foundation in database technology and an introduction to the current trends in this field.

OBJECTIVES:

- ◆ To learn the fundamentals of data models and to conceptualize and depict a database system using ER diagram.
- ◆ To make a study of SQL and relational database design.
- ◆ To understand the internal storage structures using different file and indexing techniques which will help in physical DB design.
- ◆ To know the fundamental concepts of transaction processing-concurrency control techniques and recovery procedure.
- ◆ To have an introductory knowledge about the Storage and Query processing techniques

UNIT I. INTRODUCTION

9

Database System Applications - Views of data - Data Models - Database Languages - Modification of the Database - Database System Architecture - Database users and Administrator- Introduction to relational databases - Structure of Relational Databases - Entity-Relationship model (E-R model) - E-R Diagrams.

UNIT II. RELATIONAL MODEL & SQL

9

The relational Model - Additional & Extended Relational - Types of Keys - Relational Algebra - Null Values - Domain Relational Calculus - Tuple Relational Calculus - Fundamental operations - Additional Operations- SQL fundamentals - Structure of SQL Queries SQL Data Types and Schemas - Nested Sub queries - Complex Queries - Integrity Constraints - Triggers - Security - Advanced SQL Features - Embedded SQL- Dynamic SQL-

Views - Introduction to Distributed Databases and Client/Server Databases

UNIT III. DATABASE DESIGN 9

Overview of the Design Process - Functional Dependencies - Non-loss Decomposition - Functional Dependencies - Normalization and its Types - Dependency Preservation - Boyce/Codd Normal Form- Decomposition Using Multi-valued Dependencies and Fourth Normal Form - Join Dependencies and Fifth Normal Form - Entity Sets and its Types.

UNIT IV. TRANSACTIONS 9

Transaction Concepts - Transaction State - Transaction Recovery - ACID Properties - System Recovery - Media Recovery - Two Phase Commit - SQL Facilities for recovery -Advanced Recovery Techniques - Buffer Management - Remote Backup Systems - Concurrency Control - Need for Concurrency - Locking Protocols -Two Phase Locking - Internet Locking - Deadlock Handling - Serializability - Recovery Isolation Levels - SQL Facilities for Concurrency

UNIT V. DATA STORAGE AND QUERY PROCESSING

9

Introduction to Storage and File Structure - Overview of Physical Storage Media - Magnetic Disks - RAID - Tertiary storage - File Organization - Organization of Records in Files - Indexing and Hashing - Ordered Indices - B+ tree Index Files - B- tree Index Files - Bitmap Indices - Static Hashing - Dynamic Hashing - Query Processing - Catalog Information for Cost Estimation - Selection Operation - Sorting - Join Operation - Query optimization - Database Data Analysis.

TOTAL = 45

TEXT BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, "Database System Concepts", Fifth Edition, Tata McGraw Hill, 2006 .
2. Ramez Elmasri, Shamkant B. Navathe, "Fundamentals of Database Systems", FourthEdition, Pearson / Addison wesley, 2007.

REFERENCES:

1. Raghu Ramakrishnan, "Database Management Systems", Third Edition, McGraw Hill, 2003.
2. S.K.Singh, "Database Systems Concepts, Design and Applications", First Edition, Pearson Education, 2006.

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

GRAPHICS DESIGN AND MULTIMEDIA ANIMATION
(Common for CSE/ IT)

AIM

- ◆ Introduce students to various two and three dimensional primitives and concepts
- ◆ Provide an opportunity for students to represent, design and implement two dimensional and three dimensional objects
- ◆ Introduce students to the different media used in multimedia systems.
- ◆ Introduce students to the design issues related to multimedia systems.

OBJECTIVES

- ◆ Explain two and three dimensional concepts and their applications
- ◆ Identify all techniques related to modern graphics programming concepts
- ◆ Identify the media used in multimedia systems and to assess their relative advantages and disadvantages relative to both user and system points of view.
- ◆ Explain the interaction problems introduced by multimedia (e.g., compression and synchronization)

UNIT I 2D PRIMITIVES 9

Output primitives - Line, Circle and Ellipse drawing algorithms - Attributes of output primitives - Two dimensional Geometric transformation - Two dimensional viewing - Line, Polygon, Curve and Text clipping algorithms

UNIT II 3D CONCEPTS 9

Parallel and Perspective projections - Three dimensional ob-

ject representation- Polygons, Curved lines, Splines, Quadric Surfaces,- Visualization of data sets - 3D transformations - Viewing - Visible surface identification.

UNIT III GRAPHICS PROGRAMMING 9

Color Models - RGB, YIQ, CMY, HSV - Animations - General Computer Animation, Raster, Keyframe - Graphics programming using OPENGL / Blender - Basic graphics primitives - Drawing three dimensional objects.

UNIT IV MULTIMEDIA BASICS 9

Introduction and definitions - applications - elements - Compression - Types of compressions - Lossless, Lossy - Video compression - Image Compression - Audio compression - Data and file format.

UNIT V MULTIMEDIA SYSTEMS 9

Multimedia Authoring Systems - Hypermedia Design considerations - User Interface Design - Object Display and Play back issues- Hypermedia Messaging- Distributed Multimedia Systems - Components - multimedia Object Servers - Managing Distributed Objects.

TOTAL: 45

TEXT BOOKS:

1. Donald Hearn, M.Pauline Baker, "Computer Graphics - C Version", second edition, Pearson Education,2004
2. Prabhat K Andleigh, Kiran Thakrar, "Multimedia systems design", PHI, 2007.

REFERENCES

- 1 1.F.S.Hill, "Computer Graphics using OPENGL" , Second edition, Pearson Education,2003.
- 2 Ralf Steinmetz and Klara, "Multimedia Computing, Communications and Applications", Pearson Education, 2004.

YEAR II	L	T	P	C
SEMESTER IV	3	0	0	3

COMPUTER NETWORKS

AIM :

To understand the concepts of data communication and computer networks

OBJECTIVES:

- ◆ To grasp the principles of data communication.
- ◆ To understand the layering concepts in computer networks.
- ◆ To understand the functions of each layer.

UNIT I PHYSICAL LAYER 9

Data Communications - Networks - Networks models - OSI model - Layers in OSI model - TCP / IP protocol suite - Addressing - Guided and Unguided Transmission media. Switching: Circuit switched networks - Data gram Networks - Virtual circuit networks. Cable networks for Data transmission: Dialup modems - DSL - Cable TV - Cable TV for Data transfer.

UNIT II DATA LINK LAYER 10

Data link control: Framing - Flow and error control -Protocols for Noiseless and Noisy Channels - HDLC.Multiple access: Random access - Controlled access. Wired LANS: Ethernet - IEEE standards - standard Ethernet - changes in the standard- Fast Ethernet - Gigabit Ethernet. Wireless LANS: IEEE 802.11-Bluetooth. Connecting LANS: Connecting devices - Backbone networks - Virtual LANS.Virtual circuit networks: Architecture and Layers of Frame Relay and ATM.

UNIT III NETWORK LAYER 9

Logical addressing: IPv4, IPv6 addresses. Internet Protocol: Internetworking - IPv4, IPv6 - Address mapping - ARP, RARP,BOOTP, DHCP, ICMP, IGMP, Delivery - Forwarding - Routing - Unicast, Multicast routing protocols.

UNIT IV TRANSPORT LAYER 8

Process-to-Process delivery - User Datagram Protocol (UDP) - Transmission Control Protocol (TCP) - Congestion Control - Quality of services (QoS) - Techniques to improve QoS.

UNIT V APPLICATION LAYER 9

Domain Name System (DNS) - E-mail - FTP - WWW - HTTP - Multimedia Network Security: Cryptography - Symmetric key and Public Key algorithms - Digital signature -Management of Public keys - Communication Security - Authentication Protocols.

TOTAL 45 PERIODS

TEXT BOOKS

1. Behrouz A. Foruzan, "Data communication and Networking", Tata McGraw-Hill, 2006: Unit I-IV
2. Andrew S. Tannenbaum, "Computer Networks", Pearson Education, Fourth Edition, 2003: Unit V

REFERENCE BOOKS

1. Wayne Tomasi, "Introduction to Data Communication and Networking", 1/e, Pearson
2. James .F. Kurouse & W. Rouse, "Computer Networking: A Top down Approach Featuring", 3/e, Pearson Education.
3. C.Sivaram Murthy, B.S.Manoj, "Ad hoc Wireless Networks - Architecture and Protocols", Second Edition, Pearson Education.
4. B.Muthukumaran,'High Performance Networks", Vijay Nicolle, First Edition, 2005
5. Greg Tomshon, Ed Tittel, David Johnson. "Guide to Networking Essentials", fifth Edition, Thomson India Learning, 2007.
6. William Stallings, "Data and Computer Communication", Eighth Edition, Pearson Education, 2000.

YEAR II		L	T	P	C
SEMESTER IV		0	0	4	2

**OPERATING SYSTEMS LAB
(COMMON FOR CSE/IT)**

AIM:

To have hands-on experience in operating system concepts and programming in the UNIX environment.

OBJECTIVES:

- ◆ To learn shell programming and the use of filters in the UNIX environment.
- ◆ To learn to program in C using system calls.
- ◆ To learn to use the file system related system calls.
- ◆ To have knowledge in how processes are created and processes communicate.
- ◆ To learn how process synchronization is done using semaphores

LIST OF EXPERIMENTS:

1. Execute Basic UNIX commands
2. Write C programs to simulate UNIX commands like ls, grep, etc.
3. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for FCFS and SJF. For each of the scheduling policies, compute and print the average waiting time and average turnaround time. (2sessions)
4. Given the list of processes, their CPU burst times and arrival times, display/print the Gantt chart for Priority and Round robin. For each of the scheduling policies, compute and print the average waiting time and average turnaround time. (2sessions)
5. Developing Application using Inter Process communication (using shared memory, pipes or message queues)
6. Implement the Producer - Consumer problem using semaphores

7. Implement some memory management schemes - I
8. Implement some memory management schemes - II
9. Implement any file allocation technique (Linked, Indexed or Contiguous)

YEAR II	L	T	P	C
SEMESTER IV	0	4	0	2

DBMS LAB

(Common to CSE/IT)

AIM:

The aim of this laboratory is to inculcate the abilities of applying the principles of database management systems. The course aims to prepare the students for projects where a proper implementation of databases will be required.

OBJECTIVES:

- ◆ The students will be able to create a database file
- ◆ The students will be able to query a database file
- ◆ The students will be able to append and update a database file

LIST OF EXPERIMENTS

DBMS LAB - LIST OF EXPERIMENTS

1. Data Definition Language (DDL) commands in RDBMS.
2. Data Manipulation Language (DML) and Data Control Language (DCL) commands in RDBMS.
3. High-level language extension with Cursors.
4. High level language extension with Triggers
5. Procedures and Functions.
6. Embedded SQL.
7. Database design using E-R model and Normalization.
8. Design and implementation of Payroll Processing System.
9. Design and implementation of Banking System.
10. Design and implementation of Library Information System.

YEAR II	L	T	P	C
SEMESTER IV	0	0	4	2

GRAPHICS AND MULTIMEDIA LAB

(Common for CSE /IT)

1. To implement Bresenham's algorithms for line, circle and ellipse drawing
2. To perform 2D Transformations such as translation, rotation, scaling, reflection and shearing using 2D Animation software
3. To perform 3D Transformations such as translation, rotation and scaling. 3D viewing, 3D transformations using 3D Animation software.
4. Developing interactive multimedia applications-Authoring a 2D presentation: (storyboard, design layout, collect the content, Presentation) using 2 D animation software.
5. Creating simple 3D animations and visualizations.
6. 2D Animation - To create Interactive animation using any animation software
7. Image Editing and Manipulation - Basic Operations on image using any image editing software, Creating gif animated images, Image optimization
8. Create a storyboard and script for an animation.
9. Complete a computer animation demonstrating the use of the basic elements and principles of art and design to communicate specific ideas, moods or feelings.
10. Manipulate and synchronize the sound to the animation

TOTAL: 45 PERIODS

Required software's

Algorithm based Implementations: C,C++ (free ware)

2D Animation softwares: Pencil , Synfig Studio, Open GL (Open source)

3D Animation softwares : Blender, OpenFx, (Open source)

YEAR III	L	T	P	C
SEMESTER IV	0	0	2	1

VALUE ADDED COURSE

PROFESSIONAL COMMUNICATION AND PERSONALITY DEVELOPMENT

(Common to All Branches)

AIM:

To develop graduates with good Presentation and Writing skills (Professional & Technical)

OBJECTIVES:

To improve Aptitude Skills, train to improve self-learning/researching abilities, Presentation Skills & Technical Writing (Reports, Brochures, Manuscripts/Articles)

METHODOLOGY: Modular Evaluation will be done based on Continuous Internal Assessment as Assignments, Short Communications, Proposals, Briefs, Reports, etc. Final Evaluation will be based on a Real-time research article based on current research carried out in the Institution or by any Faculty of the Institution (Good articles can be submitted to Journals co-authored by the Student and Faculty, with affiliation to the Institution)

UNIT I - COMMUNICATION AND SELF DEVELOPMENT:

Basic Concepts of Communication; Process of Communication; Types of Formal communication; The Media of Communication; Channels of Communication; Barriers in Communication; How to Overcome Barriers to Communication.

UNIT II - GRAMMAR & SYNTAX: Synonyms; Antonyms; Words used as different parts of speech; Spotting errors; Concord; Principle of proximity between subject and verb. Sentence Structure; Combination and Transformation of sentences; Verb Patterns in English.

UNIT III - READING AND WRITING SKILLS: Purpose and Process of Reading; Reading Tactics; Reading Strategies; Reading

Comprehension; Paraphrase; Preparing outlines of paragraph/text. Elements of Effective Writing; Job Application, Bio-data, Personal Resume and Curriculum Vitae; Preparing Agenda and Minutes of a Meeting; Back office job for organizing a conference/seminar; Writing Styles; Scientific and Technical Writing; Summary Writing; Writing paragraphs; Writing Essays.

UNIT IV - LISTENING AND SPEAKING SKILLS: Process of listening; Hard and Soft Skills; Feedback Skills; Essentials of Good Communications; Types of Listening; Barriers to Listening; Note taking and Note making. Skills of Effective Speaking; Component of an Effective Talk; Tone of Voice; Accent, Body Language; Timing and Duration of Speech; Audio-Visual Aids in Speech.

UNIT V - TECHNICAL REPORT, RESEARCH CASE STUDY & REPORTING:

Main considerations in writing a good report; Types and Structure of Reports; Collecting Data; Technical Proposals; Visual Aids; General Tips for Writing Reports. Research Case Study and Reporting

Text Book

1. The Functional Aspects of Communication Skills, Prajapati Prasad and Rajendra K. Sharma, S. K Kataria & Sons, New Deihl, Rep"nt 2007.

Reference Books

1. Business Communication, Sinha K. K, S. Chand, New Delhi.
2. Business Communication, Asha Kaul, Prentice Hall of India.
3. Business Correspondence and Report Writing' A Practical Approach to Business and Technical Communication, Sharma, R.C. and Krishna Mohan, Tata McGraw-Hill.
4. A New Approach to English Grammar for High Schools, Madan Sabina, Spectrum Books, New Delhi

YEAR III	L	T	P	C
SEMESTER V	3	0	1	4

DISCRETE MATHEMATICS

(Common for CSE/ IT)

Objectives:

Logic is the discipline that deals with the methods of reasoning. One of the aims of logic is to provide rules by which we can determine whether a particular reasoning or argument is valid. Combinatorics has wide application in computer Science, especially in such areas as coding theory, analysis of algorithms and probability theory.

UNIT I PROPOSITIONAL CALCULUS 9

Propositions - Logical connectives - Compound propositions - Conditional and biconditional propositions - Truth tables - Tautologies and contradictions - Contrapositive - Logical equivalences and implications - DeMorgan's Laws - Normal forms - Principal conjunctive and disjunctive normal forms - Rules of inference - Arguments - Validity of arguments.

UNIT II PREDICATE CALCULUS 9

Predicates - Statement function - Variables - Free and bound variables - Quantifiers - Universe of discourse - Logical equivalences and implications for quantified statements - Theory of inference - The rules of universal specification and generalization - Validity of arguments.

UNIT III COMBINATORICS 9

Review of Permutation and combination-Mathematical Induction-Pigeon hole principle-Principle of inclusion and exclusion-Generating function-Recurrence relations.

UNIT IV GROUPS 9

Semi groups-Monoids-groups-permutation group -Cosets-Lagranges theorem-Group homomorphism-Kernal- Rings and Fields (definitions and Examples only).

UNIT V LATTICES 9

Partial ordering- Posets-Hasse diagram-Lattices-Properties of Lattices-Sub Lattices- Distributed Lattices -Special Lattices-Boolean Algebra-Homomorphism

Tutorial : 15

Total Hours : 60

Credits : 04

Text Books:

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

PROGRAMMING AND INTERFACING WITH PROCESSORS (Common to CSE/ IT)

Objective:

To Study the architecture of Processors and to get trained in ALP. To study the various interfacing chips and the techniques of interfacing with processors

Aim:

- ◆ To study the architecture and basic programming concepts with 8085
- ◆ To study the techniques of ALP
- ◆ To study the architecture and Programming concepts with 8086
- ◆ To study the interfacing techniques with general purpose interfacing chips
- ◆ To study the interfacing techniques with special purpose interfacing chips

UNIT I: STUDY OF 8085 10

Processor based system with bus architecture-Processor Initiated Operations and 8085 Bus Organization-Internal data operations and 8085 Registers-Externally Initiated Operations-8085 Processor Pin out and Signals-8085 MPU and its Architecture-8085 Programming model-Instruction format-Machine code format-Data Format-Classification of Instructions - Addressing modes of 8085-Instruction set of 8085-Program format-Delimiters-Definitions of Instruction cycle, Machine cycle and T-state-Timing diagram (MOV r1,r2 ; IN ; LXI rp, 16bit data; MOV r, M; MVI r, data ; LDA)

UNIT II: PROGRAMMING WITH 8085 9

LOOPING, COUNTER, TIME DELAY, STACK, SUBROUTINE, CALL & RET instruction execution using timing diagram, RESTART as software instruction.Programs-Addition (8bit, 16 bit, multi byte)-Subtraction (8 bit, 16bit)-BCD Addition - Multi byte addition-Sum of an array -16 bit addition - Factorial -Multiplication-Division-Block Transfer-Sorting-Code conversion (BCD to HEX,HEX to BCD), Fibonacci series

UNIT III: STUDY AND PROGRAMMING WITH 8086 9

Software model of 8086- Physical memory organization - Physical address computation -8086 architecture-8086 bus operation with ADD AX, [BX]- 8086 signals - Addressing modes of 8086- Instruction format - Instruction set - 8086 interrupts & IVT -Stack structure of 8086-Assembler directives -Macros -Programming with 8086- Addition, Subtraction, Multiplication and Division (8bit & 16bit)

UNIT IV: GENERAL PURPOSE INTERFACING 8

8255-Block diagram-control logic, control word, BSR mode, 8253-block diagram-signals-control word format, modes of operation with waveforms, 8259-block diagram, signals, interrupt operation, modes and other features

UNIT V: SPECIAL PURPOSE INTERFACING 10

8279-Block Diagram, Signals, Modes of operations, Command words, Basic concepts in serial I/O, 8251-Methods of data communication, Block diagram, Signals, Modes of operation, Control words s,8237-Basic DMA operation, Block diagram, Signals, Modes of operation,8272- Types of Floppy disks and their operations, Block diagram, Signals, Commands, 8275- Block diagram, Signals, Display formats, Operational features, Command set.

TOTAL HOURS: 45

TEXT BOOKS

1. Ramesh S.Gaonkar, "Microprocessor - Architecture, Programming and Applications with the 8085", Penram International publishing private limited, fifth edition.
2. A.K.Ray & K.M.Bhurchandi, "Advanced Microprocessors and peripherals- Architectures, Programming and Interfacing", TMH, 2002 reprint.

JAVA PROGRAMMING

(Common CSE/ IT)

AIM

To understand the concepts of object-oriented, event-driven, and concurrent programming paradigms and develop skills in using these paradigms using Java.

OBJECTIVES:

1. Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
2. Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
3. Be aware of the important topics and principles of software development.

UNIT I

9

Object oriented programming concepts - objects - classes - methods and messages - abstraction and encapsulation - inheritance - abstract classes - polymorphism.- Objects and classes in Java - defining classes - methods - access specifiers - static members - constructors - finalize method

UNIT II

10

Arrays - Strings - Packages - Java-Doc comments -- Inheritance - class hierarchy - polymorphism - dynamic binding - final keyword - abstract classes

UNIT III

10

The Object class - Reflection - interfaces - object cloning - inner classes - proxies - I/O Streams - Graphics programming - Frame - Components - working with 2D shapes.

UNIT IV

8

Basics of event handling - event handlers - adapter classes -

actions - mouse events - AWT event hierarchy - introduction to Swing - Model-View-Controller design pattern - buttons - layout management - Swing Components - exception handling - exception hierarchy - throwing and catching exceptions.

UNIT V

8

Motivation for generic programming - generic classes - generic methods - generic code and virtual machine - inheritance and generics - reflection and generics - Multi-threaded programming - interrupting threads - thread states - thread properties - thread synchronization - Executors - synchronizers.

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

OBJECT ORIENTED ANALYSIS AND DESIGN

(Common to CSE /IT)

AIM:

To study object oriented analysis and design and the techniques needed to apply them.

OBJECTIVES:

- ◆ To study the concepts of modeling in object oriented context.
- ◆ To learn about the Object Constraint Language.
- ◆ To study and learn how to apply analysis techniques and methodologies including Use cases, System Sequence Diagrams.
- ◆ To study and learn how to apply design techniques and methodologies including Interaction Diagrams, Class Diagrams.
- ◆ To study implementation related issues.
- ◆ To study and learn how to apply advanced techniques including Architectural Analysis and Design Patterns.

UNIT I INTRODUCTION 8

An Overview of Object Oriented Systems Development - Object Basics - Object Oriented Systems Development Life Cycle.

UNIT II OBJECT ORIENTED METHODOLOGIES 12

Rumbaugh Methodology - Booch Methodology - Jacobson Methodology - Patterns - Frameworks - Unified Approach - Unified Modeling Language - Use case - class diagram - Interactive Diagram - Package Diagram - Collaboration Diagram - State Diagram - Activity Diagram.

UNIT III OBJECT ORIENTED ANALYSIS 9

Identifying use cases - Object Analysis - Classification - Identifying Object relationships - Attributes and Methods.

UNIT IV OBJECT ORIENTED DESIGN 8

Design axioms - Designing Classes - Access Layer - Object Storage - Object Interoperability.

UNIT V SOFTWARE QUALITY AND USABILITY 8

Designing Interface Objects - Software Quality Assurance - System Usability - Measuring User Satisfaction

TOTAL: 45

TEXT BOOKS

1. Ali Bahrami, "Object Oriented Systems Development", Tata McGraw-Hill, 1999 (Unit I, III, IV, V).
2. Martin Fowler, "UML Distilled", Second Edition, PHI/Pearson Education, 2002. (UNIT II)

YEAR III	L	T	P	C
SEMESTER V	3	0	0	3

WIRELESS & MOBILE NETWORKS

UNIT I INTRODUCTION 9

Medium access control - SDMA - FDMA - TDMA - CDMA - Telecommunication systems - GSM - DECT- TETRA & UMTS - Satellite systems - LEO - MEO - GEO - Handover.

UNIT II BROADCAST SYSTEM & WIRELESS LAN 9

Broadcast systems - Cyclic repetition of data - Digital audio broadcasting - Digital video broadcasting - Wireless LAN - Infrared Vs radio transmission - IEEE 802.11 - HYPER LAN - Bluetooth.

UNIT III MOBILE NETWORK LAYER 9

Mobile network layer - Mobile IP - Dynamic host configuration protocol - Adhoc networks - Routing - Destination sequence distance vector - Dynamic source routing - Hierarchical algorithms - Alternative metrics.

UNIT IV MOBILE TRANSPORT LAYER 9

Mobile transport layer - Traditional TCP - Indirect TCP - Snooping TCP - Mobile TCP - fast retransmit/fast recovery - Transmission/timeout freezing - Selective retransmission - Transaction oriented TCP.

UNIT V WAP & WLL 9

World Wide Web - Wireless Application Protocol (WAP) - WAP Architecture - WAP Protocols - VoIP service for mobile networks - Wireless Local loop (WLL).

TEXT BOOK:

1. Jochen Schiller, "Mobile Communications", 2nd Edition, Pearson Education, 2008.

REFERENCE BOOK:

1. Yi-Bing Lin, Imrich Ehlantec, John Wiley & Sons, "Wireless and Mobile Network Architectures", Inc., 2008

YEAR III	L	T	P	C
SEMESTER V	0	0	4	2

ASSEMBLY LANGUAGE PROGRAMMING LAB

(Common to CSE/IT)

AIM:

To learn the assembly language programming of 8085, 8086 and 8051 and also to give a practical training of interfacing the peripheral devices with the processor.

OBJECTIVE

- ◆ To implement the assembly language programming in 8085, 8086 and 8051
- ◆ To study the system function calls like BIOS/DOS.
- ◆ To experiment the interface concepts of various peripheral device with the processor

List of Experiments:

A. 8085 Programming

Study of 8085 Microprocessor.

Programs-Addition (8bit, 16 bit, Multi byte, Array)

Subtraction (8 bit, 16bit)

BCD Addition

Factorial

Multiplication & Division-

Block Transfer-

Sorting & Searching

Code conversion (BCD to HEX, HEX to BCD)

Fibonacci series

B. 8086 Programming

Study of 8086 Microprocessor.

16 bit & 32 bit Addition, 16 bit multiplication, 16 bit division

Ascending Order and Descending Order.

Reversal of a String.

C. Interfacing Experiments

Keyboard and Display Interface

Stepper Motor Interface

Traffic Signal Modeling

Only for Demonstration:-

6 modes of Timer

8251 interface

8272 interface

8237 Interface

YEAR III	L	T	P	C
SEMESTER V	0	4	0	2

JAVA PROGRAMMING LAB

(Common for CSE/ IT)

1. Write a JAVA program to search the largest element from the given array.
2. Write a JAVA program to sort the strings in an alphabetical order.
3. Write a JAVA program to extract a portion of a character string and to print the extracted portion and the remaining portion of the string. Assume that m characters are extracted, starting with the nth character
4. Write a JAVA program for illustrating overloading and overriding methods in JAVA.
5. Define a class Baby with the following attributes:
 - a. Name
 - b. Date of birth
 - c. Date on which BCG injection has to be given. (60 days from date of birth)
 - d. Date on which Polio drops is to be given. (45 days from date of birth)
 - e. Write a constructor to construct the Baby object. The constructor must find out BCG and polio drops dates from the date of birth. In the main program define a baby and display its details.
6. Define a class called Employee with name and date of appointment. Create 5 employee objects as an array and sort them as per their date of appointment. That is, print them as per their seniority.
7. Assume that a bank maintains two kinds of account for its customers, one called savings account and the other current account. The savings account provides compound interest for an amount that remains in the a/c for more than 45 days and withdrawal facilities but no cheque book facility. The current account provides simple interest for an amount that remains in the a/c for more than one month & also it provides cheque book facility. Current account holders should also maintain a minimum balance and if the balance falls below this level, a service charge is imposed.

8. Create a class Account that stores customer name, account number and type of account. From this derive the classes Curr-acct and Sav-acct to make them more specific to their requirements. Include the necessary methods in order to achieve the following tasks:

- a. Accept deposit from a customer and update the balance.
 - b. Display the balance.
 - c. Compute and deposit interest.
 - d. Permit withdrawal and update the balance.
 - e. Check for the minimum balance, impose penalty, if necessary, and update the balance.
 - f. Do not use any constructors. Use methods to initialize the class members.
9. Write a JAVA program which illustrates the implementation of multiple inheritance using interfaces in JAVA.
10. Write a JAVA program to create your package for basic mathematical operations such as add, subtract, multiply. Demonstrate the use of this package in another class.
11. Write a JAVA program that counts the number of digits in a given number. If an alphabet is entered instead of a number, the program should not terminate. Instead it should display appropriate error message.
12. Write a JAVA program that moves the text "School of Computer Sciences welcomes you" diagonally using Applet.
13. Write a JAVA program to create an Applet with a label "Do you know car driving?" and two buttons Yes, NO. When the user clicks "Yes" button, the message "Congrats" must be displayed. When the user clicks "NO" button, "Regrets" must be displayed.
14. Write a JAVA program to animate the face image using Applet.
15. Write a JAVA program to create four Text fields for the name, street, city and pin code with suitable Labels. Also add a button called "My Details". When you click the button, your name, street, city, and pin code must appear in the Text fields.

YEAR III	L	T	P	C
SEMESTER V	0	4	0	2

CASE TOOLS LAB

AIM:

Scope of this lab is to understand the application of case tools, which focuses on the software engineering activities.

OBJECTIVES:

- o Software requirements analysis and specification
 - o Software design
 - o Software implementation
 - o Software testing and maintenance
 - o Communication skills and teamwork
 - o Modeling techniques and CASE tools
 - o Software project planning and management
1. Prepare the following documents for two or three of the experiments listed below and develop the software engineering methodology.
 2. Program Analysis and Project Planning. Thorough study of the problem - Identify project scope, Objectives, Infrastructure.
 3. Software requirement Analysis Describe the individual Phases / Modules of the project, Identify deliverables.
 4. Data Modeling Use work products - Data dictionary, Use diagrams and activity diagrams, build and test lass diagrams, Sequence diagrams and add interface to class diagrams.
 5. Software Development and Debugging
 6. Software Testing Prepare test plan, perform validation testing, Coverage analysis, memory leaks, develop test case hierarchy, Site check and Site monitor.

SUGGESTED LIST OF APPLICATIONS

1. Student Marks Analyzing System
2. Quiz System
3. Online Ticket Reservation System
4. Payroll System
5. Course Registration System
6. Expert Systems
7. ATM Systems
8. Stock Maintenance
9. Real-Time Scheduler
10. Remote Procedure Call Implementation

YEAR III	L	T	P	C
SEMESTER VI	3	0	0	3

CRYPTOGRAPHY & NETWORK SECURITY

(COMMON FOR CSE/ IT)

AIM:

To introduce the fundamentals of Cryptography and its application to Security.

OBJECTIVES:

- ◆ To understand the mathematics behind Cryptography
- ◆ To understand the standard algorithms used to provide confidentiality provide integrity and authenticity.
- ◆ To get a working knowledge of network security, data base security and DS security issues in order to build secure systems.

UNIT I

9

Security trends - Attacks and services - Classical crypto systems - Different types of ciphers - LFSR sequences - Basic Number theory - Congruences - Chinese Remainder theorem - Modular exponentiation - Fermat and Euler's theorem - Legendre and Jacobi symbols - Finite fields - continued fractions

UNIT II

9

Simple DES - Differential cryptanalysis - DES - Modes of operation - Triple DES - AES - RC4 - RSA - Attacks - Primality test - factoring.

UNIT III

9

Discrete Logarithms - Computing discrete logs - Diffie-Hellman key exchange - ElGamal Public key cryptosystems - Hash functions - Secure Hash - Birthday attacks - MD5 - Digital signatures - RSA - ElGamal - DSA.

UNIT IV

9

Authentication applications - Kerberos, X.509, PKI - Elec-

tronic Mail security - PGP,S/MIME - IP security - Web Security - SSL, TLS, SET.

UNIT V **9**

System security - Intruders - Malicious software - viruses - Firewalls - Security Standards.

TOTAL HOURS: 45

TEXT BOOKS:

1. Wade Trappe, Lawrence C Washington, "Introduction to Cryptography with coding theory", 2nd ed, Pearson, 2007.
2. William Stallings, "Cryptography and Network security Principles and Practices", Pearson/PHI, 4th ed, 2006.

REFERENCES

1. W. Mao, "Modern Cryptography - Theory and Practice", Pearson Education, Second Edition, 2007.
2. Charles P. Pfleeger, Shari Lawrence Pfleeger - Security in computing Third Edition -Prentice Hall of India, 2006

YEAR III	L	T	P	C
SEMESTER VI	3	0	0	3

WEB TECHNOLOGY
(COMMON FOR CSE/IT)

AIM: To provide an introduction to Java and basic Web concepts and enable the student to create simple Web based applications and to create an overview of 3-tier architecture and enable the student to create enterprise applications.

OBJECTIVES:

- ◆ To introduce the features of object oriented programming languages using Java
- ◆ To design and create user interfaces using Java frames and applets
- ◆ To create simple Web pages and provide client side validation
- ◆ To create dynamic web pages using server side scripting
- ◆ To design and create user interfaces using JSP.
- ◆ To write the business logic for the middle tier.
- ◆ To provide transaction and security support for enterprise applications.

UNIT I INTRODUCTION TO NETWORK AND WEB CONCEPTS **6**

History of the Internet and World Wide Web - HTML 4 protocols - HTTP, SMTP, POP3, MIME, and IMAP. Introduction to JAVA Scripts - Object Based Scripting for the web. Structures - Functions - Arrays - Objects - Internet standards - TCP and UDP protocols - URLs - MIME - CGI - Introduction to SGML.

UNIT II SCRIPTING LANGUAGES & DYNAMIC HTML **9**

HTML - forms - frames - tables - web page design - JavaScript introduction - control structures - functions - arrays - objects -

simple web applications, Dynamic HTML - introduction - cascading style sheets - object model and collections - event model - filters and transition - data binding - data control - ActiveX control

UNIT III DATABASE- ASP - XML 12

Database, Relational Database model - Overview, SQL - ASP - Working of ASP - Objects - File System Objects - Session tracking and cookies - ADO - Access a Database from ASP - Server side Active-X Components - Web Resources - XML - Structure in Data - Name spaces - DTD - Vocabularies - DOM methods.

UNIT IV SERVER SIDE PROGRAMMING 9

IIS - Internet Information Server - web server (Java web server / Tomcat / Web logic) - HTTP GET and POST requests - session tracking - cookies - JDBC - simple web applications - multi-tier applications.

UNIT V SERVLETS AND JSP 9

Introduction - Servlet Overview Architecture - Handling HTTP Request - Get and post request - redirecting request - multi-tier applications - JSP - Overview - Objects - scripting - Standard Actions - Directives.

TOTAL: 45

TEXT BOOK

1. Deitel & Deitel, Goldberg, "Internet and World Wide Web - How to Program", Pearson Education Asia, 2001.
2. Elliotte Rusty Harold, "Java Network Programming", O'Reilly Publishers, 2002

6. Naughton, "The Complete Reference - Java2", Tata McGraw-Hill, 3rd edition, 1999.

YEAR III	L	T	P	C
SEMESTER VI	3	0	0	3

ADVANCED JAVA PROGRAMMING

(Common for CSE, IT)

AIM

To understand the concepts of object-oriented, networking, multi-tier and enterprise application and develop skills in using these paradigms using Advanced Java.

OBJECTIVES:

1. Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
2. Be aware of the important topics and principles of software development.
3. Have the ability to write programs to solve advanced problems.
4. Be able to use the Java SDK, IDEs and Web servers to create, debug and run advanced Java programs.

UNIT I JAVA FUNDAMENTALS 9

Java I/O streaming - filter and pipe streams - Byte Code interpretation - reflection - Dynamic Reflexive Classes - Threading - Java Native Interfaces- Swing.

UNIT II NETWORK PROGRAMMING IN JAVA 9

Sockets - secure sockets - custom sockets - UDP datagrams - multicast sockets - URL classes - Reading Data from the server - writing data - configuring the connection - Reading the header - telnet application - Java Messaging services

UNIT III APPLICATIONS IN DISTRIBUTED ENVIRONMENT 9

Remote method Invocation - activation models - RMI custom sockets - Object Serialization - RMI - IIOP implementation -

CORBA - IDL technology - Naming Services - CORBA programming Models - JAR file creation

UNIT IV MULTI-TIER APPLICATION DEVELOPMENT

9

Server side programming - servlets - Java Server Pages - Applet to Applet communication - applet to Servlet communication - JDBC - Using BLOB and CLOB objects - storing Multimedia data into databases - Multimedia streaming applications - Java Media Framework.

UNIT V ENTERPRISE APPLICATIONS 9

Server Side Component Architecture - Introduction to J2EE - Session Beans - Entity Beans - Persistent Entity Beans - Transactions.

TOTAL : 45

TEXT BOOKS

2. Patrick Naughton, "COMPLETE REFERENCE: JAVA2", Tata McGraw-Hill, 2003.

YEAR III		L	T	P	C
SEMESTER VI		3	0	0	3

CLLOUD COMPUTING

AIM

The purpose of cloud computing is used to end users access cloud-based applications through a web browser or a light-weight desktop or mobile app while the business software and user's data are stored on servers at a remote location.

OBJECTIVES

- ◆ The main objective of a cloud computing entrusts remote services with a user's data, software and computation.
- ◆ Enabling convenient, on-demand network access to a shared pool of configurable computing resources

UNIT I UNDERSTANDING CLOUD COMPUTING 9

Cloud Computing - History of Cloud Computing - Cloud Architecture - Cloud Storage -Why Cloud Computing Matters - Advantages of Cloud Computing - Disadvantages of Cloud Computing - Companies in the Cloud Today - Cloud Services

UNIT II DEVELOPING CLOUD SERVICES 9

Web-Based Application - Pros and Cons of Cloud Service Development - Types of Cloud Service Development - Software as a Service - Platform as a Service - Web Services - On-Demand Computing - Discovering Cloud Services Development Services and Tools - Amazon Ec2 - Google App Engine - IBM Clouds

UNIT III CLOUD COMPUTING FOR EVERYONE 9

Centralizing Email Communications - Collaborating on Schedules - Collaborating on To-Do Lists - Collaborating Contact Lists - Cloud Computing for the Community - Collaborating on Group Projects and Events - Cloud Computing for the Corporation

UNIT IV USING CLOUD SERVICES 9

Collaborating on Calendars, Schedules and Task Management

- Exploring Online Scheduling Applications - Exploring Online Planning and Task Management - Collaborating on Event Management - Collaborating on Contact Management - Collaborating on Project Management - Collaborating on Word Processing - Collaborating on Databases - Storing and Sharing Files

UNIT V OTHER WAYS TO COLLABORATE ONLINE 9

Collaborating via Web-Based Communication Tools - Evaluating Web Mail Services -Evaluating Web Conference Tools - Collaborating via Social Networks and Groupware -Collaborating via Blogs and Wikis

Total Hours: 45

TEXT BOOKS

1. Michael Miller, "Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online", Que Publishing, August 2008.
2. Haley Beard, "Cloud Computing Best Practices for Managing and Measuring.Processes for On-demand Computing, Applications and Data Centers in the Cloud with SLAs", Emereo Pty Limited, July 2008.

YEAR III	L	T	P	C
SEMESTER VI	3	0	0	3

SERVICE ORIENTED ARCHITECTURE

AIM:

To provide an overview of Service Oriented Architecture and enable the student to create applications in a collaborative environment.

OBJECTIVES:

- ◆ To study the importance of Service Oriented Architecture.
- ◆ Implementation of SOA in the Java and .NET frameworks.
- ◆ To study the advanced features of SOA.

UNIT I 9

Introduction - Service Oriented Enterprise - Service Oriented Architecture (SOA) - SOA and Web Services - Multi-Channel Access - Business Process management - Extended Web Services Specifications - Overview of SOA - Concepts - Key Service Characteristics - Technical Benefits - Business Benefits

UNIT II 9

SOA and Web Services - Web Services Platform - Service Contracts - Service-Level Data Model - Service Discovery - Service-Level Security - Service-Level Interaction patterns - Atomic Services and Composite Services - Proxies and Skeletons - Communication - Integration Overview - XML and Web Services - .NET and J2EE Interoperability - Service-Enabling Legacy Systems - Enterprise Service Bus Pattern

UNIT III 9

Multi-Channel Access - Business Benefits - SOA for Multi Channel Access - Tiers - Business Process Management - Concepts - BPM, SOA and Web Services - WSBPEL - Web Services Composition

UNIT IV 9

Java Web Services - JAX APIs - JAXP - JAX-RPC - JAXM - JAXR - JAXB

UNIT V 9

Metadata Management - Web Services Security - Advanced Messaging - Transaction Management

TOTAL: 45 PERIODS

TEXTBOOKS:

1. Eric Newcomer, Greg Lomow, "Understanding SOA with Web Services", Pearson Education, 2005.
2. James McGovern, Sameer Tyagi, Michael E Stevens, Sunil Mathew, "Java Web Services Architecture", Elsevier, 2003. (Unit 4)

7. Sandeep Chatterjee, James Webber, "Developing Enterprise Web Services", Pearson Education, 2004.

YEAR III	L	T	P	C
SEMESTER VI	0	4	0	2

ADVANCED JAVA PROGRAMMING LAB

(Common for CSE, IT)

1. Write a Java Program to implement multithreading(three threads using single run method).
2. Write a Java Program to implement the calculator.
3. Write a Java Program to implement the URL.
4. Write a Java Program to implement the InetAddress.
5. Write a Java Program for Sending E-mail in Java.
6. Write a Java Program to implement Single Client-Server Communication.
7. Write a Java Program to implement the Login_Id Form using JDBC.
8. Write a Java Program to implement the SQL commands using JDBC.
9. Write a Java Program to implement the JTrees.
10. Write a Java Program to implement the JTable.
11. Write a Java Program to create the table using JDBC.
12. Write a Java Program to implement Remote Method Invocation.
13. Write a Java Program to implement CORBA technology

YEAR III	L	T	P	C
SEMESTER VI	0	4	0	2

WEB TECHNOLOGY LAB

(Common for CSE, IT)

1. Creation of HTML pages with frames, links, tables and other tags
2. Usage of internal and external CSS along with HTML pages
3. Client side Programming
 - # Java script for displaying date and comparing two dates
 - # Form Validation including text field, radio buttons, check boxes, list box and other controls
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc
 - # Writing online applications such as shopping, railway/air/bus ticket reservation system with set of ASP/JSP pages
 - # Using sessions and cookies as part of the web application
5. Writing Servlet Program using HTTP Servlet
6. Any online application with database access
7. Creation of XML document for a specific domain
8. Writing DTD or XML schema for the domain specific XML document
9. Parsing an XML document using DOM and SAX Parsers
10. Sample web application development in the open source environment

YEAR III	L	T	P	C
SEMESTER VI	0	0	4	2

SERVICE ORIENTED ARCHITECTURE LAB

AIM:

To enable the student to use Service Oriented Architecture and related technologies.

OBJECTIVES:

- ◆ To work with XML and related technologies.
- ◆ Implementation of Web services in the Java and .NET frameworks.
- ◆ To study and work with security and smart device applications.

LIST OF EXPERIMENTS:

1. Develop at least 5 components such as Order Processing, Payment Processing, etc., using .NET component technology.
2. Develop at least 5 components such as Order Processing, Payment Processing, etc., using EJB component technology.
3. Invoke .NET components as web services.
4. Invoke EJB components as web services.
5. Develop a Service Orchestration Engine (workflow) using WS-BPEL and implement service composition. For example, a business process for planning business travels will invoke several services. This process will invoke several airline companies (such as American Airlines, Delta Airlines etc.) to check the airfare price and buy at the lowest price.
6. Develop a J2EE client to access a .NET web service. 7. Develop a .NET client to access a J2EE web service.

YEAR III	L	T	P	C
SEMESTER VII	3	0	0	3

BUSINESS INTELLIGENCE AND ITS APPLICATIONS (COMMON FOR CSE/IT)

UNIT - I INTRODUCTION TO BUSINESS INTELLIGENCE 9

Introduction to OLTP AND OLAP - BI Definition and BI Concepts - Business Applications of BI - BI Framework- Role of Data Warehousing in BI -BI Infrastructure Components- BI Process - Developing Data Warehouse - Management Framework - Business driven approach -BI Technology -- BI Roles & Responsibilities

UNIT - II BASICS OF DATA INTEGRATION (Extraction Transformation Loading) 9

Concepts of Data Integration need and advantages of using Data Integration - Introduction to common data integration approaches - Introduction to ETL using SSIS - Introduction to Data Quality - Data Profiling Concepts and Applications.

UNIT - III INTRODUCTION TO MULTIDIMENSIONAL DATA MODELING 9

Introduction to Data and Dimensional Modeling - Multi Dimensional Data Model - ER modeling Vs Multi Dimensional Model - Concepts of Dimensions - facts - cubes- attributes- hierarchies- star and snowflake schema - Introduction to Business Metrics and KPIs - Creating Cubes using SSAS.

UNIT - IV BASICS OF ENTERPRISE REPORTING 9

Introduction to Enterprise Reporting - Concepts of dashboards - balanced scorecards - Introduction to SSRS Architecture- Enterprise Reporting using SSRS reporting service

UNIT - V BI ROAD AHEAD 9

BI and Mobility - BI and cloud computing - BI for ERP sys-

tems - Benefits of BI in ERP-NorthWind_Traders Data-Data Analyses through Excel-Kettle Tool - Conversion of data using Kettle Tool.

TOTAL : 45

ENGINEERING MANAGEMENT AND ETHICS

(Common to Bio-Tech,Bio-Medical,Civil,CSE,ECE,EEE,EIE,IT,Mechatronics)

UNIT I PLANNING 9

Nature and purpose of planning - Planning process - Types of plans - Objectives Managing by objective (MBO) Strategies - Types of strategies - Policies - Decision Making - Types of decision - Decision Making Process - Rational Decision Making Process - Decision Making under different conditions.

UNIT II ORGANIZING 9

Nature and purpose of organizing - Organization structure - Formal and informal groups I organization - Line and Staff authority - Departmentation - Span of control - Centralization and Decentralization - Delegation of authority - Staffing - Selection and Recruitment - Orientation - Career Development - Career stages - Training - Performance Appraisal.

UNIT III DIRECTING 9

Creativity and Innovation - Motivation and Satisfaction - Motivation Theories - Leadership Styles - Leadership theories - Communication - Barriers to effective communication - Organization Culture - Elements and types of culture - Managing cultural diversity.

UNIT IV INTRODUCTION TO ETHICS 9

Moral dilemmas -Uses of Ethical Theories- Engineering As Social Experimentation- Engineer's Responsibility For Safety-Codes of Ethics-Challenger Case Study

UNIT V ETHICS IN ENGINEERING 9

Employed Engineers Rights and Duties- Collective Bargaining- Occupational Crime- Global Issues- Multinational Corporation-

Technology transfer-Engineers as managers-Consulting Engineers-
Expert Witness-Moral Leadership

SEMESTER VII	3	0	0	3

INFORMATION SECURITY

(Common to All Branches)

AIM

To study the critical need for ensuring Information Security in Organizations

OBJECTIVES

1. To understand the basics of Information Security
2. To know the legal, ethical and professional issues in Information Security
3. To know the aspects of risk management
4. To become aware of various standards in this area
5. To know the technological aspects of Information Security

UNIT 1 INTRODUCTION 9

History, What is Information Security?, Critical Characteristics of Information, NSTISSC Security Model, Components of an Information System, Securing the Components, Balancing Security and Access, The SDLC, The Security SDLC

UNIT II SECURITY INVESTIGATION 9

Need for Security, Business Needs, Threats, Attacks, Legal, Ethical and Professional Issues

UNIT III SECURITY ANALYSIS 9

Risk Management: Identifying and Assessing Risk, Assessing and Controlling Risk

UNIT IV LOGICAL DESIGN 9

Blueprint for Security, Information Security Policy, Standards and Practices, ISO 17799/BS 7799, NIST Models, VISA International Security Model, Design of Security Architecture, Planning for Continuity

UNIT V PHYSICAL DESIGN

9

Security Technology, IDS, Scanning and Analysis Tools, Cryptography, Access Control Devices, Physical Security, Security and Personnel

TOTAL : 45

TEXT BOOK

YEAR III	L	T	P	C
SEMESTER VII	3	0	0	3

SOFTWARE TESTING (Common for CSE, IT)

AIM:

The course looks at the role of developers in areas such as test planning, implementation, and defect tracking. It explains how to review and manage test requirements and how to incorporate testing into the software development life cycle.

OBJECTIVES:

- ◆ To determine software testing objectives and criteria
- ◆ To develop and validate a test plan
- ◆ To select and prepare test cases
- ◆ To identify the need for testing
- ◆ To prepare testing policies and standards
- ◆ To use testing aids and tools
- ◆ To test before buying a software package
- ◆ Test after maintenance and enhancement changes
- ◆ To measure the success of testing efforts

UNIT I INTRODUCTION

8

Testing as an Engineering Activity, Role of Process in Software Quality, Testing as a Process, Basic Definitions, Software Testing Principles, The Tester's Role in a Software Development Organization, Origins of Defects, Defect Classes, The Defect Repository and Test Design, Defect Examples, Developer/Tester Support for Developing a Defect Repository

UNIT II TEST CASE DESIGN

11

Introduction to Testing Design Strategies, The Smarter Tester, Test Case Design Strategies, Using Black Box Approach to Test Case Design, Random Testing, Equivalence Class Partitioning, Boundary Value Analysis, Other Black-box Test Design Ap-

proaches, Black-box testing and COTS, Using White-Box Approach to Test design, Test Adequacy Criteria, Coverage and Control Flow Graphs, Covering Code Logic, Paths: Their Role in White-box Based Test Design, Additional White Box Test Design Approaches, Evaluating Test Adequacy Criteria

UNIT III LEVELS OF TESTING 9

The Need for Levels of Testing, Unit Test, Unit Test Planning, Designing the Unit Tests. The Class as a Testable Unit, The Test Harness, Running the Unit tests and Recording results, Integration tests, Designing Integration Tests, Integration Test Planning, System Test - The Different Types, Regression Testing, Alpha, Beta and Acceptance Tests

UNIT IV TEST MANAGEMENT 9

Introductory Concepts, Testing and Debugging Goals and Policies, Test Planning, Test Plan Components, Test Plan Attachments, Locating Test Items, Reporting Test Results, The role of three groups in Test Planning and Policy Development, Process and the Engineering Disciplines, Introducing the test specialist, Skills needed by a test specialist, Building a Testing Group

UNIT V CONTROLLING AND MONITORING 8

Defining Terms, Measurements and Milestones for Controlling and Monitoring, Status Meetings, Reports and Control Issues, Criteria for Test Completion, SCM, Types of reviews, Developing a review program, Components of Review Plans, Reporting review results

TOTAL : 45

YEAR III	L	T	P	C
SEMESTER VII	3	0	0	3

C# AND .NET Framework (Common for CSE, IT)

AIM:

To provide an introduction to the .NET framework and enable the student to program in C#.

OBJECTIVES:

- ◆ To study basic and advanced features of the C# language
- ◆ To create form based and web based applications
- ◆ To study the internals of the .NET framework

UNIT I INTRODUCTION 9

Overview Of .Net-Advantages Of .Net Over Other Languages-Assemblies-.Net Architecture-The Role of C# In The .Net Enterprise Architecture-The Common Language Runtime-C# Basics-Objects And Types-Inheritance -Arrays

UNIT II OBJECT ORIENTED ASPECTS OF C# 9

Operators and Casts: Operators - Type Safety - Operator Overloading - User-Defined Casts. Delegates and Events: Delegates - Events. Strings and Regular Expressions: System.String -Regular Expressions. Collections: Collection Interfaces and Types - Lists - Queues - Stacks -Linked Lists - Sorted Lists - Dictionaries - Hash Set - Bit Arrays - Performance-Indexers

UNIT III I/O AND NETWORK PROGRAMMING 9

Tracing and events - threading and synchronization - .Net security - localization -Manipulating XML - Managing the file system - basic network programming

UNIT IV ADO.NET 9

Data Access: ADO.NET Overview - Using Database Connections - Commands - Fast Data Access: The Data Reader - Managing Data and Relationships: The DataSet Class - XML Schemas:

Generating Code with XSD - Working with ADO.NET. Windows Forms: Creating a Windows Form Application - Control Class - Standard Controls and Components - Forms. Data Binding: The DataGridView Control - DataGridView Class Hierarchy - Data Binding - Visual Studio .NET and Data Access.

UNIT V ASP.NET AND WEB SERVICES 9

ASP.NET Pages: ASP.NET Introduction - ASP.NET Web Forms - ADO.NET and Data Binding. ASP.NET Development: User and Custom Controls - Master Pages - Site Navigation - Security -Themes - Web Parts. ASP.NET AJAX: What Is Ajax - What Is ASP.NET AJAX - Using ASP.NET AJAX.

SEMESTER VII	0	4	0	2

SOFTWARE TESTING LAB (Common for CSE/IT)

AIM:

To understand the various testing tools and their use with various testing methodologies

OBJECTIVES:

- ◆ To study the working of testing tools
 - ◆ To apply the fundamental testing techniques associated with software project development
 - ◆ To automate various testing strategies in specific domains
1. Study of various tools for software testing such as WinRunner, LoadRunner, Rational Rose Test Suite etc.,
 2. Performing the following testing using the testing tools
 - a. Requirements testing
 - b. Use-case scenario testing
 - c. Design testing
 - d. Code testing
 - e. Path testing
 - f. Code coverage testing
 - g. Data-flow testing
 - h. Load testing
 - i. Regression testing
 - j. Documentation testing
 3. Mini-project: developing an automated test-case generation tool for domains such as :
 - a. web-site development
 - b. inventory management
 - c. shopping cart
 - d. finance management
 - e. health-care

YEAR III	L	T	P	C
SEMESTER VII	0	4	0	2

C# AND. NET FRAMEWORK LAB (Common for CSE, IT)

LIST OF EXPERIMENTS

1. Classes and Objects using out, ref and params
2. Student Information System using Properties
3. Banking Application using Inheritance
4. Library Management using Predefined Interfaces
5. Students Admission using User defined Interfaces
6. Solving Postfix Expressions using Stack
7. Solving Complex Numbers using Operator Overloading
8. Matrix Addition, Subtraction, Multiplication and Division using Delegates
9. User Subscription for News Events using Events
10. Calculator using Windows Application
11. Advanced Windows Controls

YEAR IV	L	T	P	C
SEMESTER VII	0	0	3	2

MINI PROJECT

OBJECTIVES:

1. The students in batches (not exceeding three in a batch) have to take up a project in the area of their own interest related to their specialization .
2. Each batch is guided by a faculty member. The students have to select a suitable problems, design, prepare the drawings, produce the components, assemble and commission the project.
3. The students have to prepare and present a detailed project report at the end of the VII semester.
4. The evaluation will be made for the continuous internal assessment for the Project by a committee nominated by the Head of the Department.

YEAR IV	L	T	P	C
SEMESTER VIII	3	0	12	6

UG - PROJECT WORK & VIVA VOCE

OBJECTIVE

◆ The objective of the project work is to enable the students to form the groups of not more than 3 members on a project involving theoretical and experimental studies related to the branch of study.

- ◆ Formation of Group as follows
- ◆ Group A : 8.5CGPA and above
- ◆ Group B : 7 to 8.49 CGPA
- ◆ Group C : 5 to 6.9 CGPA

Group A Student will have a choice to take 2 students from Group B&C

◆ Every project work shall have a guide who is the member of the faculty of the institution. Six periods per week shall be allotted in the time table and this time shall be utilized by the students to receive the directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and also to present in periodical seminars on the progress made in the project.

◆ The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design and manufacture of a device, a research investigation, a computer or management project or a design problem.

◆ The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department.

◆ Each student shall finally produce a comprehensive report covering background information, literature survey, problem statement, project work details and conclusion.

◆ This final report shall be typewritten form as specified in the guidelines.

◆ The continuous assessment shall be made as prescribed in the regulations

**LIST OF ELECTIVES
CYBER SECURITY**

AIM

To study the critical need for ensuring Cyber Security in real time problems

OBJECTIVES

1. To understand the basics of Cyber Security
2. To know the legal, ethical and professional issues in Cyber Security
3. To know the various attacker techniques

UNIT I CYBER SECURITY FUNDAMENTALS

Network and security concepts - basic cryptography - Symmetric encryption - Public key Encryption - DNS - Firewalls - Virtualization - Radio Frequency Identification - Microsoft Windows security Principles.

UNIT II ATTACKER TECHNIQUES AND MOTIVATIONS

Antiforensics - Tunneling techniques - Fraud Techniques - Threat Infrastructure.

UNIT III EXPLOITATION

Techniques to gain a foot hold - Misdirection, Reconnaissance, and disruption methods.

UNIT IV MALICIOUS CODE

Self Replication Malicious code - Evading Detection and Elevating privileges - Stealing Information and Exploitation.

UNIT V DEFENSE AND ANALYSIS TECHNIQUES

Memory Forensics - Honeypots - Malicious code naming - Automated malicious code analysis systems - Intrusion detection systems - Defense special file investigation tools.

TOTAL: 45

TEXT BOOK

1. James Graham, Richard Howard and Ryan Olson, "Cyber Security Essentials", CRC Press, Taylor & Francis Group, 2011.

REFERENCE BOOKS

1. By Dan Shoemaker, Ph.D., William Arthur Conklin, Wm Arthur Conklin, "Cybersecurity: The Essential Body of Knowledge", Cengage Learning, 2012.
2. Ali Jahangiri, "Live Hacking: The Ultimate Guide to hacking Techniques & Counter measures for Ethical Hackers & IT Security Experts", 2009.

ELECTIVE	L	T	P	C
	3	0	0	3

OPEN SOURCE SYSTEMS

AIM:

The student will get exposure to operating system and networking concepts.

OBJECTIVES:

1. To learn about GNU/Linux based servers and workstation
2. To learn shell programming
3. To learn about application and server software
4. To learn free and open source components.

Unit I 9

Overview of Free/Open Source Software-- Definition of FOSS & GNU, History of GNU/Linux and the Free Software Movement , Advantages of Free Software and GNU/Linux, FOSS usage , trends and potential-global and Indian. GNU/Linux OS installation-- detect hardware, configure disk partitions & file systems and install a GNU/Linux distribution ; Basic shell commands - logging in, listing files, editing files, copying/moving files, viewing file contents, changing file modes and permissions, process management ; User and group management, file ownerships and permissions, PAM authentication ; Introduction to common system configuration files & log files ; Configuring networking, basics of TCP/IP networking and routing, connecting to the Internet (through dialup, DSL, Ethernet, leased line).

Unit II 9

Configuring additional hardware - sound cards, displays & display cards, network cards, modems, USB drives, CD writers ; Understanding the OS boot up process; Performing every day tasks using gnu/Linux -- accessing the Internet, playing music, editing documents and spreadsheets, sending and receiving email, copy files from disks and over the network, playing games, writing CDs

; X Window system configuration and utilities -- configure X windows, detect display devices ; Installing software -- from source code as well as using binary packages. Setting up email servers-- using postfix (SMTP services), courier (IMAP & POP3 services), squirrel mail (web mail services) ; Setting up web servers -- using apache (HTTP services), php (server-side scripting), perl (CGI support) ; Setting up file services -- using samba (file and authentication services for windows networks), using NFS (file services for gnu/Linux /Unix networks) ; Setting up proxy services -- using squid (http / ftp / https proxy services) ; Setting up printer services - using CUPS (print spooler), foomatic (printer database)

Unit III 9

Setting up a firewall - Using netfilter and ip tables; Using the GNU Compiler Collection - GNU compiler tools ; the C preprocessor (cpp), the C compiler (gcc) and the C++ compiler (g++), assembler (gas) ; Understanding build systems -- constructing make files and using make, using autoconf and autogen to automatically generate make files tailored for different development environments ; Using source code versioning and management tools -- using CVS to manage source code revisions, patch & diff.

Unit IV 9

Understanding the GNU Libc libraries and linker -- linking against object archives (.a libraries) and dynamic shared object libraries (.so libraries), generating statically linked binaries and libraries, generating dynamically linked libraries ; Using the GNU debugging tools -- gdb to debug programs, graphical debuggers like ddd, memory debugging / profiling libraries mpatrol and valgrind ; Review of common programming practices and guidelines for GNU/Linux and FOSS ; Introduction to Bash, sed & awk scripting. Basics of the X Windows server architecture.

Unit V 9

Basics of the X Windows server architecture ; Qt Programming ; Gtk+ Programming ; Python Programming ; Programming GUI applications with localization support.

BUILDING ENTERPRISE APPLICATION

Unit I: 9

Introduction to enterprise applications and their types, software engineering methodologies, life cycle of raising an enterprise application, introduction to skills required to build an enterprise application, key determinants of successful enterprise applications, and measuring the success of enterprise applications

Unit II: 9

Inception of enterprise applications, enterprise analysis, business modeling, requirements elicitation, use case modeling, prototyping, non functional requirements, requirements validation, planning and estimation

Unit III: 9

Concept of architecture, views and viewpoints, enterprise architecture, logical architecture, technical architecture- design, different technical layers, best practices, data architecture and design - relational, XML, and other structured data representations, Infrastructure architecture and design elements - Networking, Internetworking, and Communication Protocols, IT Hardware and Software, Middleware, Policies for Infrastructure Management, Deployment Strategy, Documentation of application architecture and design

Unit IV: 9

Construction readiness of enterprise applications - defining a construction plan, defining a package structure, setting up a configuration management plan, setting up a development environment, introduction to the concept of Software Construction Maps, construction of technical solutions layers, methodologies of code review, static code analysis, build and testing, dynamic code analysis - code profiling and code coverage

Unit V: 9

Types and methods of testing an enterprise application, testing levels and approaches, testing environments, integration testing, performance testing, penetration testing, usability testing, globalization testing and interface testing, user acceptance testing, rolling out an enterprise application.

TOTAL: 45

GRID COMPUTING

AIM:

To understand the latest advances in the field of computation to optimize the utilization of resources.

OBJECTIVES:

- ◆ To enable resource sharing across networks
- ◆ To integrate heterogeneous computing systems and data resources with the aim of providing a global computing space
- ◆ To manage and schedule the resources in grid environments
- ◆ To know the standards and protocols used
- ◆ To Know the middleware in grid computing

UNIT I CONCEPTS AND ARCHITECTURE 9

Introduction-Parallel and Distributed Computing-Cluster Computing-Grid Computing- Anatomy and Physiology of Grid-Review of Web Services-OGSA-WSRF. \

UNIT II GRID MONITORING 9

Grid Monitoring Architecture (GMA) - An Overview of Grid Monitoring Systems- GridI CE - JAMM -MDS-Network Weather Service-R-GMA-Other Monitoring Systems- Ganglia and GridMon

UNIT III GRID SECURITY AND RESOURCE MANAGEMENT 9

Grid Security-A Brief Security Primer-PKI-X509 Certificates-Grid Security-Grid Scheduling and Resource Management-Scheduling Paradigms- Working principles of Scheduling -A Review of Condor, SGE, PBS and LSF-Grid Scheduling with QoS.

UNIT IV DATA MANAGEMENT AND GRID PORTALS 9

Data Management-Categories and Origins of Structured Data-

Data Management Challenges-Architectural Approaches-Collective Data Management Services-Federation Services-Grid Portals-First-Generation Grid Portals-Second-Generation Grid Portals.

UNIT V GRID MIDDLEWARE

9

List of globally available Middlewares - Case Studies-Recent version of Globus Toolkit and GLite - Architecture, Components and Features.

TOTAL 45

ADVANCED DATABASE TECHNOLOGY

AIM:

Advanced database aims at providing an understanding of the principles used in the design of different kinds of data models. It is also deals with the Transaction management of these different databases.

OBJECTIVES:

- ◆ To understand about different data models that can be used for specialized applications
- ◆ To make the students to get familiarized with transaction management of advanced database models
- ◆ To develop in-depth knowledge about web and intelligent database systems.
- ◆ To provide an introductory concept about the way in which data can be stored in multimedia databases.

UNIT I DISTRIBUTED DATABASES

9

Distributed DBMS Concepts and Design - Introduction - Functions and Architecture of DDBMS - Distributed Relational Database Design - Transparency in DDBMS - Distributed Transaction Management - Concurrency control - Deadlock Management - Database recovery - The X/Open Distributed Transaction Processing Model - Replication servers - Distributed Query Optimisation - Distribution and Replication in Oracle.

UNIT II OBJECT ORIENTED DATABASES

9

Object Oriented Databases - Introduction - Weakness of RDBMS - Object Oriented Concepts Storing Objects in Relational Databases - Next Generation Database Systems - Object Oriented Data models - OODBMS Perspectives - Persistence - Issues in OODBMS - Object Oriented Database Management System Manifesto - Advantages and Disadvantages of OODBMS - Object Ori-

ented Database Design - OODBMS Standards and Systems - Object Management Group - Object Database Standard ODMG - Object Relational DBMS -Postgres - Comparison of ORDBMS and OODBMS.

UNIT III WEB DATABASES 9

Web Technology And DBMS - Introduction - The Web - The Web as a Database Application Platform - Scripting languages - Common Gateway Interface - HTTP Cookies - Extending the Web Server - Java - Microsoft's Web Solution Platform - Oracle Internet Platform - Semi structured Data and XML - XML Related Technologies - XML Query Languages

UNIT IV INTELLIGENT DATABASES 9

Enhanced Data Models For Advanced Applications - Active Database Concepts And Triggers - Temporal Database Concepts - Deductive databases - Knowledge Databases.

UNIT V CURRENT TRENDS 9

Mobile Database - Geographic Information Systems - Genome Data Management - Multimedia Database - Parallel Database - Spatial Databases - Database administration - Data Warehousing and Data Mining.

TOTAL : 45

INTELLECTUAL PROPERTY RIGHTS

UNIT I - INTRODUCTION TO INTELLECTUAL PROPERTY 9

Introduction - Invention and Creativity - An Overview of Intellectual Property (IP) - Importance - Protection of IPR - Basic types of property. Forms of Industrial Properties: Patents, Industrial Designs, Plant Varieties, copyrights, Trademarks, Geographical Indications.

UNIT II - INTERNATIONAL PROTECTION OF INTELLECTUAL PROPERTY RIGHTS 9

Establishment of WIPO, General Agreement on Trade and Tariff (GATT). Patent Co-Operation Treaty, TRIPS agreement, Bern Convention, Rome convention, WTO and Intellectual Property Rights.

UNIT III - PATENTS 9

Introduction to Patents - Overview, Historical development, concepts on Novelty, Utility, Non-Obviousness. Patentable and Non Patentable Inventions. Procedure for Filing of patents. Acquisition of patent rights. Compulsory Licenses, patent offices in India and jurisdiction.

UNIT IV - COPYRIGHTS, TRADEMARKS, OTHER INTELLECTUAL PROPERTY RIGHTS 9

Copyrights and related rights - Trade Marks and rights arising from Trademark registration - Definitions - Industrial Designs and Integrated circuits - Protection of Geographical Indications at national and International levels, Plant Varieties - Application Procedures, Trade Secret, Infringement of Patents and Remedies. Modification of granted patents.

UNIT V - LEGAL ASPECTS OF INTELLECTUAL PROPERTY RIGHTS 9

Case Studies on - Patents - Copyright and related rights - Trade Marks - Industrial design and Integrated circuits - Geographic indications - Protection against unfair competition. Enforcement of Intellectual Property Rights

TCP / IP TECHNOLOGY

AIM :

To understand the concepts of TCP/IP protocol suite.

OBJECTIVES:

1. To grasp the introduction of OSI model.
2. To understand the layering concepts in computer networks.
3. To understand the functions of each layer.

UNIT I INTRODUCTION 9

Protocols and standards - OSI model - TCP / IP protocol suite - addressing - versions - underlying technologies.

UNIT II IP ADDRESSES, ROUTING, ARP AND RARP 9

Classful addressing - other issues - subnetting - supernetting - classless addressing - routing methods - delivery - table and modules - CIDR - ARP package - RARP.

UNIT III IP, ICMP, IGMP AND UDP 9

Datagram - fragmentation - options - checksum - IP package - ICMP - messages, formats - error reporting - query - checksum - ICMP package - IGMP - messages, operation - encapsulation - IGMP package - UDP - datagram - checksum - operation - uses - UDP package.

UNIT IV TCP, UNICAST AND MULTICAST ROUTING PROTOCOLS 9

Services - flow, congestion and error control - TCP package and operation - state transition diagram - unicast routing protocols - RIP - OSPF - BGP - multicast routing - trees - protocols - MOSPF - CBT - PIM

UNIT V APPLICATION LAYER, SOCKETS 9

Client server model - concurrency - processes - sockets - byte ordering - socket system calls - TCP and UDP client-server programs - BOOTP -DHCP - DNS - name space, resolution - types of records - concept - mode of operation - Rlogin.

TEXT BOOKS

SOFT COMPUTING

AIM:

To give an overall understanding on the theories that are available to solve hard real world problems

OBJECTIVES:

- ◆ To give the students an overall knowledge of soft computing theories and fundamentals
- ◆ To give an understanding on the fundamentals of non-traditional technologies and approaches to solving hard real-world problems
- ◆ Fundamentals of artificial neural networks, fuzzy sets and fuzzy logic and genetic algorithms.
- ◆ Use of ANN, Fuzzy sets to solve hard real-world problems
- ◆ To given an overview of Genetic algorithms and machine learning techniques to solving hard real-world problems
- ◆ To study about the applications of these areas

UNIT I FUZZY SET THEORY 10

Introduction to Neuro - Fuzzy and Soft Computing - Fuzzy Sets - Basic Definition and Terminology - Set-theoretic Operations - Member Function Formulation and Parameterization - Fuzzy Rules and Fuzzy Reasoning - Extension Principle and Fuzzy Relations - Fuzzy If-Then Rules - Fuzzy Reasoning - Fuzzy Inference Systems - Mamdani Fuzzy Models - Sugeno Fuzzy Models - Tsukamoto Fuzzy Models - Input Space Partitioning and Fuzzy Modeling.

UNIT II OPTIMIZATION 8

Derivative-based Optimization - Descent Methods - The Method of Steepest Descent - Classical Newton's Method - Step Size Determination - Derivative-free Optimization - Genetic Algorithms - Simulated Annealing - Random Search - Downhill Simplex Search.

UNIT III NEURAL NETWORKS 10

Supervised Learning Neural Networks - Perceptrons - Adaline - Backpropagation Mutilayer Perceptrons - Radial Basis Function Networks - Unsupervised Learning Neural Networks - Competitive Learning Networks - Kohonen Self-Organizing Networks - Learning Vector Quantization - Hebbian Learning.

UNIT IV NEURO FUZZY MODELING 9

Adaptive Neuro-Fuzzy Inference Systems - Architecture - Hybrid Learning Algorithm - Learning Methods that Cross-fertilize ANFIS and RBFN - Coactive Neuro Fuzzy Modeling - Framework Neuron Functions for Adaptive Networks - Neuro Fuzzy Spectrum.

UNIT V APPLICATIONS OF COMPUTATIONAL INTELLIGENCE 8

Printed Character Recognition - Inverse Kinematics Problems - Automobile Fuel Efficiency Prediction - Soft Computing for Color Recipe Prediction.

DESIGN AND ANALYSIS OF ALGORITHMS

(Common to CSE/CSSE/MECHT)

AIM:

The aim is to introduce the basics of algorithm design paradigms and analysis to enable designing of efficient algorithms.

OBJECTIVES:

- ◆ To introduce the basic concepts of algorithm analysis
- ◆ To introduce the design paradigms for algorithm design
- ◆ To introduce the basic complexity theory.

UNIT I 9

Algorithm Analysis - Time Space Tradeoff - Asymptotic Notations - Conditional asymptotic notation - Removing condition from the conditional asymptotic notation - Properties of big-Oh notation - Recurrence equations - Solving recurrence equations - Analysis of linear search.

UNIT II 9

Divide and Conquer: General Method - Binary Search - Finding Maximum and Minimum - Merge Sort - Greedy Algorithms: General Method - Container Loading - Knapsack Problem.

UNIT III 9

Dynamic Programming: General Method - Multistage Graphs - All-Pair shortest paths - Optimal binary search trees - 0/1 Knapsack - Traveling salesperson problem.

UNIT IV 9

Backtracking: General Method - 8 Queens Problem - sum of subsets - graph coloring - Hamiltonian problem - knapsack problem.

UNIT V 9

Graph Traversals - Connected Components - Spanning Trees - Biconnected components - Branch and Bound: General Methods (FIFO & LC) - 0/1 Knapsack Problem - Introduction to NP-Hard and NP-Completeness.

CODE	3	0	0	3

ELECTIVE- TOTAL QUALITY MANAGEMENT

(Common to CSE, Mech, Civil, Bio-Tech, Auto)

OBJECTIVE (Common to all branches)

- ◆ To understand the Total Quality Management concept and principles
- ◆ The various tools available to achieve Total Quality Management.
- ◆ To understand the statistical approach for quality control.
- ◆ To create an awareness about the ISO and QS certification process and its need for the industries.
- ◆ To understand the statistical approach of quality systems involved

UNIT -1 INTRODUCTION 9

Definition of Quality, Dimensions of Quality, Quality Planning, Quality costs - Analysis Techniques for Quality Costs, Basic concepts of Total Quality Management, Historical Review, Principles of TQM, Leadership - Concepts, Role of Senior Management, Quality Council, Quality Statements, Strategic Planning, Deming Philosophy, Barriers to TQM Implementation.

UNIT -2 TQM PRINCIPLES 9

Customer satisfaction - Customer Perception of Quality, Customer Complaints, Service Quality, Customer Retention, Employee Involvement - Motivation, Empowerment, Teams, Recognition and Reward, Performance Appraisal, Benefits, Continuous Process Improvement - Juran Trilogy, PDCA Cycle, 5S, Kaizen, Supplier Partnership - Partnering, sourcing, Supplier Selection, Supplier Rating, Relationship Development, Performance Measures - Basic Concepts, Strategy, Performance Measure.

UNIT -3 STATISTICAL PROCESS CONTROL (SPC) 9

The seven tools of quality, Statistical Fundamentals - Measures

of central Tendency and Dispersion, Population and Sample, Normal Curve, Control Charts for variables and attributes, Process capability, Concept of six sigma, New seven Management tools.

UNIT -4 TQM TOOLS 9

Benchmarking - Reasons to Benchmark, Benchmarking Process, Quality Function Deployment (QFD) - House of Quality, QFD Process, Benefits, Taguchi Quality Loss Function, Total Productive Maintenance (TPM) - Concept, Improvement Needs, FMEA - Stages of FMEA.

UNIT - 5 QUALITY SYSTEMS 9

Need for ISO 9000 and Other Quality Systems, ISO 9000:2000 Quality System - Elements, Implementation of Quality System, Documentation, Quality Auditing, TS 16949, ISO 14000 - Concept, Requirements and Benefits.

VISUAL PROGRAMMING

AIM:

To introduce windows programming and to cover visual C++ in detail.

OBJECTIVES:

1. To introduce event driven programming
2. To develop and display a window
3. To illustrate the working of message loop

UNIT I WINDOWS PROGRAMMING 9

Windows environment - a simple windows program - windows and messages - creating the window - displaying the window - message loop - the window procedure - message processing - text output - painting and repainting - introduction to GDI - device context - basic drawing - child window controls

UNIT II VISUAL C++ PROGRAMMING - INTRODUCTION 9

Application Framework - MFC library - Visual C++ Components - Event Handling - Mapping modes - colors - fonts - modal and modeless dialog - windows common controls - bitmaps

UNIT III THE DOCUMENT AND VIEW ARCHITECTURE 9

Menus - Keyboard accelerators - rich edit control - toolbars - status bars - reusable frame window base class - separating document from its view - reading and writing SDI and MDI documents - splitter window and multiple views - creating DLLs - dialog based applications

UNIT IV ACTIVEX AND OBJECT LINKING AND EMBEDDING (OLE) 9

ActiveX controls Vs. Ordinary Windows Controls - Installing

ActiveX controls - Calendar Control - ActiveX control container programming - create ActiveX control at runtime - Component Object Model (COM) - containment and aggregation Vs. inheritance - OLE drag and drop - OLE embedded component and containers - sample applications

UNIT V ADVANCED CONCEPTS 9

Database Management with Microsoft ODBC - Structured Query Language - MFC ODBC classes - sample database applications - filter and sort strings - DAO concepts - displaying database records in scrolling view - Threading - VC++ Networking issues - Winsock - WinInet - building a web client - Internet Information Server - ISAPI server extension - chat application - playing and multimedia (sound and video) files

USER INTERFACE DESIGN

AIM:

To understand that User Interface Design is as important as Functionality Design to study the basic principles User-Centered Design

OBJECTIVES:

1. To study the basic characteristics of graphics and web interfaces
2. To study the basics of Human Computer Interaction
3. To study the basics of WIMP interfaces
4. To study the multimedia interfaces for the web
5. To study the principles of evaluating interfaces

UNIT I 8

Introduction-Importance-Human-Computer interface-characteristics of graphics interface-Direct manipulation graphical system - web user interface-popularity-characteristic & principles.

UNIT II 10

User interface design process- obstacles-usability-human characteristics in design - Human interaction speed-business functions-requirement analysis-Direct-Indirect methods-basic business functions-Design standards-system timings - Human consideration in screen design - structures of menus - functions of menus-contents of menu-formatting -phrasing the menu - selecting menu choice-navigating menus-graphical menus.

UNIT III 9

Windows: Characteristics-components-presentation styles-types-managements-organizations-operations-web systems-device-based controls: characteristics-Screen -based controls: operate

control - text boxes-selection control-combination control-custom control-presentation control.

UNIT IV 9

Text for web pages - effective feedback-guidance & assistance-Internationalization-accesssibility-Icons-Image-Multimedia -coloring.

UNIT V 9

Windows layout-test :prototypes - kinds of tests - retest - Information search - visualization - Hypermedia - www - Software tools.

THEORY OF COMPUTATION

AIM:

To have foundation on automata languages and grammar.

OBJECTIVES:

Develop the concepts and skills necessary to be able to evaluate the compatibility and undecidability.

UNIT I AUTOMATA 9

Introduction to formal proof - Additional forms of proof - Inductive proofs - Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - Finite Automata with Epsilon transitions.

UNIT II REGULAR EXPRESSIONS AND LANGUAGES 9

Regular Expression - FA and Regular Expressions - Proving languages not to be regular - Closure properties of regular languages - Equivalence and minimization of Automata.

UNIT III CONTEXT-FREE GRAMMARS AND LANGUAGES 9

Context-Free Grammar (CFG) - Parse Trees - Ambiguity in grammars and languages - Definition of the Pushdown automata - Languages of a Pushdown Automata - Equivalence of Pushdown automata and CFG- Deterministic Pushdown Automata.

UNIT IV PROPERTIES OF CONTEXT-FREE LANGUAGES 9

Normal forms for CFG - Pumping Lemma for CFL - Closure Properties of CFL - Turing Machines - Programming Techniques for TM.

UNIT V UNDECIDABILITY 9

A language that is not Recursively Enumerable (RE) - An undecidable problem that is RE - Undecidable problems about Turing Machine - Post's Correspondence Problem - The classes P and NP.

ENTERPRISE RESOURCE PLANNING

AIM

To know the strategic importance of Enterprise Resource Planning.

UNIT I INTRODUCTION 9

ERP: An Overview, Enterprise - An Overview, Benefits of ERP, ERP and Related Technologies, Business Process Reengineering (BPR), Data Warehousing, Data Mining, OLAP, SCM

UNIT II ERP IMPLEMENTATION 9

ERP Implementation Lifecycle, Implementation Methodology, Hidden Costs, Organizing the Implementation, Vendors, Consultants and Users, Contracts with Vendors, Consultants and Employees, Project Management and Monitoring

UNIT III THE BUSINESS MODULES 9

Business modules in an ERP Package, Finance, Manufacturing, Human Resources, Plant Maintenance, Materials Management, Quality Management, Sales and Distribution

UNIT IV THE ERP MARKET 9

ERP Market Place, SAP AG, Peoplesoft, Baan, JD Edwards, Oracle, QAD, SSA

UNIT V ERP - PRESENT AND FUTURE 9

DISTRIBUTED SYSTEMS

AIM:

The aim of the course is to convey an insight into the fundamental concepts, principles, and state-of-the-art practice underlying the design of distributed systems.

OBJECTIVES:

- ◆ To understand the importance of communication in distributed environment and the actual implementation of various communication mechanisms
- ◆ To study how a distributed operating system works and how it differs from the single processor OS.
- ◆ To learn how to manage the resources in a distributed environment
- ◆ To learn how to make a distributed systems fault tolerant
- ◆ To study how the above-mentioned techniques have been used in actual, real-life distributed systems.

UNIT I COMMUNICATION IN DISTRIBUTED ENVIRONMENT 8

Introduction - Various Paradigms in Distributed Applications - Remote Procedure Call - Remote Object Invocation - Message-Oriented Communication - Unicasting, Multicasting and Broadcasting - Group Communication.

UNIT II DISTRIBUTED OPERATING SYSTEMS 12

Issues in Distributed Operating System - Threads in Distributed Systems - Clock Synchronization - Causal Ordering - Global States - Election Algorithms - Distributed Mutual Exclusion - Distributed Transactions - Distributed Deadlock - Agreement Protocols .

UNIT III DISTRIBUTED RESOURCE MANAGEMENT 10

Distributed Shared Memory - Data-Centric Consistency Models - Client-Centric Consistency Models - Ivy - Munin - Distributed Scheduling - Distributed File Systems - Sun NFS.

UNIT IV FAULT TOLERANCE AND CONSENSUS 7

Introduction to Fault Tolerance - Distributed Commit Protocols - Byzantine Fault Tolerance - Impossibilities in Fault Tolerance.

UNIT V CASE STUDIES 8

Distributed Object-Based System - CORBA - COM+ - Distributed Coordination- Based System - JINI.

TOTAL:45 PERIODS

DATA WAREHOUSING AND MINING

Aim

To provide an in-depth knowledge of the Data Warehousing and Data Mining and the application. Also make awareness about the recent trends in Data Mining.

Objective:

- ◆ At the end of this course the student should be able to:
- ◆ Distinguish a data warehouse from an operational database system, and appreciate the needs for developing a data warehouse for large corporation;
- ◆ Describe the problems and processes involved in the development of a data warehouse;
- ◆ Explain the process of data mining and its importance

UNIT I INTRODUCTION AND DATA WAREHOUSING

8

Introduction, Data Warehouse, Multidimensional Data Model, Data Warehouse Architecture, Implementation, Further Development, Data Warehousing to Data Mining

UNIT II DATA PREPROCESSING, LANGUAGE, ARCHITECTURES, CONCEPT DESCRIPTION

8

Why Preprocessing, Cleaning, Integration, Transformation, Reduction, Discretization, Concept Hierarchy Generation, Data Mining Primitives, Query Language, Graphical User Interfaces, Architectures, Concept Description, Data Generalization, Characterizations, Class Comparisons, Descriptive Statistical Measures.

UNIT III ASSOCIATION RULES

9

Association Rule Mining, Single-Dimensional Boolean Association Rules from Transactional Databases, Multi-Level Association Rules from Transaction Databases

UNIT IV CLASSIFICATION AND CLUSTERING

12

Classification and Prediction, Issues, Decision Tree Induction, Bayesian Classification, Association Rule Based, Other Classification Methods, Prediction, Classifier Accuracy, Cluster Analysis, Types of data, Categorisation of methods, Partitioning methods, Outlier Analysis.

UNIT V RECENT TRENDS

8

Multidimensional Analysis and Descriptive Mining of Complex Data Objects, Spatial Databases, Multimedia Databases, Time Series and Sequence Data, Text Databases, World Wide Web, Applications and Trends in Data Mining

TOTAL : 45

REMOTE INFRASTRUCTURE MANAGEMENT

UNIT I INFRASTRUCTURE MANAGEMENT OVERVIEW

9

Definitions, Infrastructure management activities, Evolutions of Systems and their management, growth of internet, current business demands and IT systems issues, complexity of today's computing environment, Total cost of complexity issues, Value of Systems management for business

UNIT II PREPARING FOR INFRASTRUCTURE MANAGEMENT

9

Factors to consider in designing IT organizations and IT infrastructure, Determining customer's Requirements, Identifying System Components to manage, Exist Processes, Data, applications, Tools and their integration, Patterns for IT systems management, Introduction to the design process for information systems, Models, Information Technology Infrastructure Library.

UNIT III SERVICE DELIVERY PROCESSES

9

Service-level management, financial management and costing, IT services continuity management, Capacity management, Availability management

UNIT IV SERVICE SUPPORT PROCESSES

9

Configuration Management, Service desk, Incident management, Problem management, Change management and Release management

UNIT V STORAGE AND SECURITY MANAGEMENT

9

Introduction Security, Identity management, Single sign-on, Access Management, Basics of network security, LDAP fundamentals, Intrusion detection, firewall, security information management Introduction to Storage, Backup & Restore, Archive & Retrieve, Space Management, SAN & NAS, Disaster Recovery, Hierarchical space

management, Database & Application protection, Bare machine recovery, Data retention.

DIGITAL IMAGE PROCESSING

AIM:

The aim is to inculcate a basic training in the processing of images for practical applications in the domain of medical, remoting sessions and in general.

OBJECTIVES:

- ◆ To introduce basic concepts in acquiring, storage and Processing of images
- ◆ To introduce for enhancing the quality of images.
- ◆ To introduce techniques for extraction and processing of region of interest
- ◆ To introduce case studies of Image Processing.

UNIT I INTRODUCTION TO IMAGE PROCESSING SYSTEMS & IMAGE TRANSFORMS 9

Introduction, Image sampling, Quantization, Resolution, Image file formats, Elements of image processing system, Applications of Digital image processing Introduction, Need for transform, image transforms, Fourier transform, 2 D Discrete Fourier transform, Walsh transform, Hadamard transform, Haar transform, Slant transform, Discrete cosine transform, KL transform, Singular value decomposition, Radon transform, Comparison of different image transforms

UNIT II IMAGE ENHANCEMENT 9

Introduction to image enhancement, Enhancement in spatial domain, Enhancement through point operation, Types of point operation, Histogram manipulation, Linear Gray level transformation, Nonlinear Gray level transformation, Local or neighborhood operation, Median filter, Image sharpening, Bit plane slicing, Image enhancement in the frequency domain.

UNIT III IMAGE RESTORATION 9

Introduction to Image restoration, Image degradation, Types of image blur, Classification of image restoration techniques, Image restoration model, Linear and Nonlinear image restoration techniques, Blind deconvolution

UNIT IV IMAGE SEGMENTATION 9

Introduction to image segmentation, Classification of segmentation techniques, Region approach to image segmentation, clustering techniques, Image segmentation based on thresholding, Edge based segmentation, Edge detection and linking, Hough transform, Active contour

UNIT V IMAGE COMPRESSION AND COLOUR IMAGE PROCESSING 9

Introduction, Need for image compression, Redundancy in images, Classification of redundancy in images, image compression scheme, Classification of image compression schemes, Run length coding, Shannon - Fano coding, Huffman coding, Arithmetic coding, Predictive coding, Transformed based compression, Image compression standard, Wavelet-based image compression

Introduction to Colour Image processing, Light and colour, colour formation, Human perception of colour, colour model. The chromaticity diagram, colour image quantization, Histogram of colour image, colour image filtering, Gamma correction of a colour image, colour image segmentation

MANAGEMENT INFORMATION SYSTEM

UNIT I INTRODUCTION

12

Business Information Systems - Data-Information Systems - Information Systems in Business - Strategic uses of Information Systems - Strategy and strategic moves - Achieving a Competitive Advantages - Information Systems in Business functions - Effectiveness and Efficiency - Manufacturing and Inventory control - Marketing sales and customer service - Human Resources - Enterprise Resource Planning - Groupware and Collaborative work - Applications - Data and knowledge Management - Database Architecture - Web Databases - Data Warehousing - Data Mining - Knowledge Management.

UNIT II INFORMATION TECHNOLOGY IN MANAGEMENT

12

Managers and Their Information Needs - The organizational pyramid - characteristics of Information at different managerial levels - The Nature of Management work - Organizational Structure - Characteristics of Effective Information - Managers and Their Information systems - Information - Politics and power - Organizing Information Systems and services - Sector Books - Information Systems Architecture and Management - Organizing the IS staff - Challenges for IS Managers and Line Managers - The Information center - Careers in Information Systems.

UNIT II IS IN DECISION MAKING

12

Decision support, Executive and Geographic Information systems - Deciding on Decision Aids - Decision Making in Business - The Decision - Making process - structured and unstructured problems - DSS Components - Sensitivity Analysis - Executive Information Systems - Artificial Intelligence (AI) and Expert Systems - AI in Business - Knowledge Representation Methods - Expert Systems in Action.

UNITIV PLANNING INFORMATION SYSTEMS 12

Why plan - Approaches to planning - IS planning - The systems Development Life cycle - Prototyping - Computer Aided Software Engineering - Project Management - Systems Development led by end users - Systems Integration - Avenues for Systems Acquisition - Sources of Information - Outsourcing - The IS subsidiary - purchase application - Renting Software - User Application Development.

UNIT V CONTROLS, SECURITY AND APPLICATIONS 12

Goals of Information security - Risks to Information Systems - Controls - Recovery measures - Application of MIS in Decision Making - Organizational Decision making in Manufacturing sector - personnel management - Financial Management - Marketing Management - Applications in Service Sector.

RUBY PROGRAMMING

UNIT I 9

Fundamentals- What is Ruby; Ruby download and installation; irb and SciTE; Free format; Case sensitive; Comments; Statement delimiters; Documentation; Operators (with precedence and associativity rules); Ruby editors; .rb file; Concept of an object and that everything is an object in Ruby; Object class and its methods; Usage of puts, gets methods; Ruby conventions; Garbage collection Variables and Constants- Name characters; Variables - local, instance, class, global; Constants naming, rules and concept of scope operator ::; Naming conventions; Dynamically typed; Usage of method type Numbers- Concept and usage with Class Numeric, Float, Integer, Fixnum and Bignum

UNIT II 9

Strings- String literals using single- and double-quotes and their differences; Usage of #{expression}; Conversions using .to_i, .to_f, .to_s; Usage of <<; Concept of symbols; Class String methods like chomp, reverse, length, upcase, downcase, swapcase, capitalize, strip, length, index, slice, upcase!, downcase!, swapcase! and capitalize!. Random Numbers- rand method, Arrays- Concept; Class Array methods like delete, sort, length and each using do end

UNIT III 9

Concept of Ranges and Hashes Constructs- if else end elsif; while end; case when end Regular Expressions- Simple examples Methods- Writing own methods using def end; class and instance methods (with getter and setter); return and concept of value returned by last statement in a method; variable number of parameters using *.

UNIT IV 9

Code Blocks- Using do end and { }; Usage of yield method; Concept of Proc and it's method call; lambda File I/O- File class

and its method open Writing a class- Standard class Class; initialize; new methods; Access modifiers private and protected; Usage of attr_reader, attr_writer, attr_accessor; Concept of inheritance and using <; Using super Concept of Duck Typing.

UNIT V

9

Modules - Examples of writing a module; Usage of require and include; Concept of mix-ins Exception handling- Exception class and its hierarchy; begin rescue ensure end; Concept of Unit Testing Standard Classes and Modules- Usage of Dir, Time, Thread, Range, IO, Module, GC, Kernel, Math - usage.

ARTIFICIAL INTELLIGENCE

AIM:

The aim of this course is to provide an introduction to some basic issues and algorithms in artificial intelligence (AI). The course also provides an overview of intelligent agent design, where agents perceive their environment and act rationally to fulfill their goals. The course approaches AI from an algorithmic, computer science-centric perspective.

OBJECTIVES:

- ◆ To be familiar with the history of AI, philosophical debates, and be able to discuss the potential and limitations of the subject in its current form.
- ◆ To identify the kind of problems that can be solved using AI technique: to know the relation between AI and other areas of computer science.
- ◆ To have knowledge of generic problem-solving methods in AI.
- ◆ To understand the basic techniques of knowledge representation and their use.
- ◆ To know what the basic components of an intelligent agent are, and how this relates to other advanced subjects such as information retrieval, database systems, computer vision, robotics, human-computer interaction, reactive systems etc.
- ◆ To be able to implement basic decision making algorithms, including search-based problem solving techniques, and first-order logic.
- ◆ To know the basic issues in machine learning, and be able to apply straightforward techniques to learn from observed data.
- ◆ To be able to explain the difficulty of computer perception with examples from different modalities, and be able to show how perception affects intelligent systems design.

UNIT I-INTRODUCTION 9

Introduction-Definition-History of Artificial Intelligence-Intelligent Agents-Types Of Agents-Problem Solving Approach To AI Problems-Problem Formulation

UNIT II-PROBLEM SOLVING 9

Problem Solving Methods-Search Strategies-Uninformed Search Strategies-Comparison of Uninformed Search Algorithms-Informed Search Strategies-Local Search Algorithms-Searching With Partial Information-Constraint Satisfaction Problem

UNIT III-KNOWLEDGE REPRESENTATION 9

Propositional Logic-First Order Predicate Logic-Prolog Programming-Unification-Forward Chaining- Backward Chaining- Ontological Engineering-Categories and Objects-Events-Mental Events and Mental Objects-Reasoning Systems for Categories-Reasoning With Default Information

UNIT IV-MACHINE LEARNING 9

Bayes Rule and Its Applications-Bayesian Networks-Inferences in Bayesian Networks-Hidden Markov Models-Learning from Observation-Supervised Learning-Inductive Learning-Decision Trees-Statistical Learning Methods-Reinforcement Learning

UNIT V-APPLICATIONS 9

AI Applications-Language Models-Information Retrieval-Information Extraction-Natural Language Processing-Machine Translation-Speech Recognition

SOFTWARE PROJECT MANAGEMENT

UNIT I 12

Introduction - Product Life - Project life cycle models - water fall model - Prototyping model - RAD model - Spiral Model - Process Models - Matrics.

UNIT II 12

Software Configuration Management - Definitions and terminology - processes and activities - Configuration audit - Matrics - Software Quality assurance - definitions - quality control and assurance - SQA Tools - Organisation of Structures - Risk Management - Risk Identification, quantification Monitoring - Mitigation.

UNIT III 12

Project initiation - Project Planning and tracking - what, cost, when and how - organisational processes - assigning resources - project tracking - project closure - when and how.

UNIT IV 12

Software requirements gathering - steps to be followed - skills sets required - challenges - matrics - Estimation 3 phases of estimation - formal models for size estimation - translating size estimate to effort schedule estimate, matrics - Design and Development phases - reusability, Technology choices, Standards, Portability user interface - testability - diagonosability etc.

UNIT V 12

Project Management in testing phase - in the maintenance phase - Impact on internet on project Management.

EMBEDDED SYSTEMS

Aim

To give sufficient background for undertaking embedded systems design.

UNIT I INTRODUCTION REVIEW OF EMBEDDED HARDWARE 9

Terminology Gates - Timing Diagram - Memory - microprocessors Buses-Direct Memory Access-interrupts -Built-ins on the Microprocessor-Conventions Used on Schematic-schematic. Interrupts Microprocessor Architecture-Interrupt Basics-Shared Data Problem-Interrupt latency.

UNIT II PIC MICROCONTROLLER AND INTERFACING 9

Introduction, CPU architecture, registers, instruction sets addressing modes Loop timing, timers, Interrupts, Interrupt timing, I/o Expansion, I²C Bus Operation Serial EEPROM, Analog to digital converter, UART-Baud Rate-Data Handling-Initialization, Special Features - serial Programming-Parallel Slave Port.

UNIT III EMBEDDED MICROCOMPUTER SYSTEMS 9

Motorola MC68H11 Family Architecture Registers, Addressing modes Programs. Interfacing methods parallel I/O interface, Parallel Port interfaces, Memory Interfacing, High Speed I/O Interfacing, Interrupts-interrupt service routine-features of interrupts-Interrupt vector and Priority, timing generation and measurements, Input capture, Output compare, Frequency Measurement, Serial I/o devices Rs.232, Rs.485. Analog Interfacing, and Applications.

UNIT IV SOFTWARE DEVELOPMENT AND TOOLS 9

Embedded system evolution trends. Round - Robin, robin with Interrupts, function-One-Scheduling Architecture, Algorithms. In-

roduction to-assembler-compiler-cross compilers and Integrated Development Environment (IDE). Object Oriented Interfacing, Recursion, Debugging strategies, Simulators.

UNIT V REAL TIME OPERATING SYSTEMS 9

Task and Task States, tasks and data, semaphores and shared Data Operating system Services-Message queues-Timer Function-Events-Memory Management, Interrupt Routines in an RTOS environment, basic design Using RTOS.

NETWORK PROGRAMMING AND MANAGEMENT

Aim

To enable the students to develop the necessary skills for developing robust & scalable network applications and to build necessary basic knowledge for managing networks.

UNIT I ELEMENTARY TCP SOCKETS 9

Introduction to Socket Programming - Overview of TCP/IP Protocols - Introduction to Sockets - Socket address Structures - Byte ordering functions - address conversion functions - Elementary TCP Sockets - socket, connect, bind, listen, accept, read, write, close functions - Iterative Server - Concurrent Server.

UNIT II APPLICATION DEVELOPMENT 9

TCP Echo Server - TCP Echo Client - Posix Signal handling - Server with multiple clients - boundary conditions: Server process Crashes, Server host Crashes, Server Crashes and reboots, Server Shutdown - I/O multiplexing - I/O Models - select function - shutdown function - TCP echo Server (with multiplexing) - poll function - TCP echo Client (with Multiplexing)

UNIT III SOCKET OPTIONS, ELEMENTARY UDP SOCKETS 9

Socket options - getsockopt and setsockopt functions - generic socket options - IP socket options - ICMP socket options - TCP socket options - Elementary UDP sockets - UDP echo Server - UDP echo Client - Multiplexing TCP and UDP sockets - Domain name system - gethostbyname function - Ipv6 support in DNS - gethostbyadr function - getservbyname and getservbyport functions.

UNIT IV ADVANCED SOCKETS 9

Ipv4 and Ipv6 interoperability - threaded servers - thread creation and termination - TCP echo server using threads - Mutexes -

condition variables - raw sockets - raw socket creation - raw socket output - raw socket input - ping program - trace route program.

UNIT V SIMPLE NETWORK MANAGEMENT 9

SNMP network management concepts - SNMP management information - standard MIB's - SNMPv1 protocol and Practical issues - introduction to RMON, SNMPv2 and SNMPv3.

TOTAL : 45

ADHOC AND SENSOR NETWORKS

AIM:

To provide a strong foundation in wireless adhoc networks and specialized adhoc networks like most networks and sensor networks.

UNIT I ROUTING 9

Cellular and Ad hoc wireless networks - Issues of MAC layer and Routing - Proactive, Reactive and Hybrid Routing protocols - Multicast Routing - Tree based and Mesh based protocols - Multicast with Quality of Service Provision

UNIT II QUALITY OF SERVICE 9

Real-time traffic support - Issues and challenges in providing QoS - Classification of QoS Solutions - MAC layer classifications - QoS Aware Routing Protocols - Ticket based and Predictive location based QoS Routing Protocols

UNIT III ENERGY MANAGEMENT AD HOC NETWORKS 9

Need for Energy Management - Classification of Energy Management Schemes - Battery Management and Transmission Power Management Schemes - Network Layer and Data Link Layer Solutions - System power Management schemes

UNIT IV MESH NETWORKS 9

Necessity for Mesh Networks - MAC enhancements - IEEE 802.11s Architecture - Opportunistic Routing - Self Configuration and Auto Configuration - Capacity Models - Fairness - Heterogeneous Mesh Networks - Vehicular Mesh Networks

UNIT V SENSOR NETWORKS 9

Introduction - Sensor Network architecture - Data Dissemination - Data Gathering - MAC Protocols for sensor Networks -

Location discovery - Quality of Sensor Networks - Evolving Standards - Other Issues - Recent trends in Infrastructure less Networks

VALUE ADDED COURSE:

RESEARCH PRACTICE AND TECHNICAL WRITING

AIM

To develop graduates with good Research Aptitude Presentation and Writing skills (Professional & Technical)

OBJECTIVES

◆ To improve Research Aptitude Skills, train to improve self-learning/researching abilities, Presentation Skills & Technical Writing (Reports, Brochures, Manuscripts/Articles)

METHODOLOGY

◆ Modular Evaluation will be done based on Continuous Internal Assessment as Assignments, Short Communications, Proposals, Briefs, Reports, etc.

◆ Final Evaluation will be based on a Real-time research article based on current research carried out in the Institution or by any Faculty of the Institution (Good articles can be submitted to Journals co-authored by the Student and Faculty, with affiliation to the Institution)

UNIT I: INTRODUCTION TO SCIENTIFIC METHODS

Objectives for a Research, Referring base concepts, types of research, Feasibility Overview of research methods, steps of the scientific method, engineering research Types of projects and partnerships, requirements, collaboration spirit and constraints

UNIT II: RESEARCH ETHICS AND INTELLECTUAL PROPERTY RIGHTS

Ethical issues and behavior, responsible conduct, scientific practices and violation IPR Concepts, types, protection mechanisms, rights identification, rights transfer

UNIT III: LITERATURE REVISION AND RESEARCH PURSUIT

Information sources, information search, special sources, synthesis and critics, Literature Survey and Analysis, Experimentation, Types of Experimentation, Quantitative Analysis, Qualitative Analysis

UNIT IV: ASSESSMENT OF RESEARCH RESULTS AND TECHNICAL WRITING

Phases of research and outcomes, research performance indicators Components of a Technical Report, Design and Drafting, Defense, Writing scientific papers,

UNIT V: VALIDATION AND PUBLICATION

Structure, research question, research contribution, validation of results, modification and re-drafting Publication channels, evaluation procedures, citations
