REPORT ON TRAIN THE TRAINERS

Date: 16/08/2023

Venue: Integrated Engineering Design Research lab

The Adavan Energy Swaraj Club has organized an event titled "Train the Trainers" which aimed at educating office bearers of the club about the significance of the climate clock and climate change. The event began with a welcome address by Mr.Veeramuneeswaran P, the club's president. Dr. L Chitra, head of the Electrical and Electronics department, handled a session on the climate clock's importance, its construction, and provided an overview of the climate emergency that we are currently experiencing. The Climate Clock emphasises the short amount of time left to act and the necessity for prompt and forceful action, serving as a visual depiction of the urgency of the climate problem. The amount of time before the earth warms by 1.5oC is indicated by the climate clock. Climate scientists predict that the change in climate will start to become irreversible at this level of global warming and will be totally irreversible by 2oC of global warming. It gives a sense of urgency and a call to action, reminding people that there isn't much time left to address the climate catastrophe. The event concluded with a vote of thanks delivered by Ms.Preveena, the club's secretary.
