

Faculty of Engineering and Technology

Programme : M.E – Manufacturing Engineering – PART TIME

CHOICE BASED CREDIT SYSTEM (CBCS)

Curriculum & Syllabus

(Semester I to VI)

Regulations 2021

VINAYAKA MISSION'S RESEARCH FOUNDATION, DEEMED TO BE UNIVERSITY, SALEM

Department of Mechanical Engineering

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

	The graduates will execute their professional skills and knowledge acquired
PEO 1	in the field of manufacturing engineering and management of the resources
	The graduates will provide the innovative solutions to the problems arising
PEO 2	in production to implement the green manufacturing
	The graduate will execute the work with professional ethics, team work,
PEO 3	develop quality products and will follow human values in their life.
	The graduates will be able to develop innovative products and to become
PEO 4	entrepreneur.
	The graduates will involve in continuous learning and will be able to
PEO 5	execute consultancy services.

PROGRAM SPECIFIC OUTCOMES (PSOs)

To achieve the mission of the program, Mechanical Engineering graduates will be able:

	To work independently as well as in team to formulate, design, execute					
PSO.1	solutions for engineering problems and also analyze, synthesize technical					
	data for application to product, process, system design & development					
To understand & contribute towards social, environmental issues						
PSO.2	following professional ethics and codes of conduct and embrace lifelong					
	learning for continuous improvement					
	To develop expertise towards use of modern engineering tools, careers in					
PSO.3	industries and research and demonstrate entrepreneurial skill					

PROGRAMME OUTCOMES

Engineering Graduates will be able to:

	Engineering knowledge: Apply the knowledge of mathematics, science,
PO1	engineering fundamentals, and an engineering specialization to the solution of
101	complex engineering problems
	Problem analysis: Identify, formulate, review research literature, and analyze
PO2	complex engineering problems reaching substantiated conclusions using first
102	principles of mathematics, natural sciences, and engineering sciences.
	Design/development of solutions: Design solutions for complex engineering
	problems and design system components or processes that meet the specified
PO3	needs with appropriate consideration for the public health and safety, and the
	cultural, societal, and environmental considerations.
	Conduct investigations of complex problems: Use research-based
	knowledge and research methods including design of experiments, analysis
PO4	and interpretation of data, and synthesis of the information to provide valid
	conclusions.
	Modern tool usage: Create, select, and apply appropriate techniques,
	resources, and modern engineering and IT tools including prediction and
PO5	modeling to complex engineering activities with an understanding of the
	limitations.
	The engineer and society: Apply reasoning informed by the contextual
PO6	knowledge to assess societal, health, safety, legal and cultural issues and the
	consequent responsibilities relevant to the professional engineering practice.
	Environment and sustainability: Understand the impact of the professional
PO7	engineering solutions in societal and environmental contexts, and demonstrate
	the knowledge of, and need for sustainable development.
DOG	Ethics: Apply ethical principles and commit to professional ethics and
PO8	responsibilities and norms of the engineering practice.
DOG	Individual and team work: Function effectively as an individual, and as a
PO9	member or leader in diverse teams, and in multidisciplinary settings.
	Communication: Communicate effectively on complex engineering activities
PO10	with the engineering community and with society at large, such as, being able
1010	to comprehend and write effective reports and design documentation, make
	effective presentations, and give and receive clear instructions.
	Project management and finance: Demonstrate knowledge and
PO11	understanding of the engineering and management principles and apply these
1011	to one's own work, as a member and leader in a team, to manage projects and
	in multidisciplinary environments.
	Life-long learning: Recognize the need for, and have the preparation and
PO12	ability to engage in independent and life-long learning in the broadest context
	of technological change.

PREAMBLE

This course is designed to provide the solid foundation on topics in applied probability and various statistical methods which form the basis for many other areas in the mathematical sciences including statistics, modern optimization methods and risk modelling. It is framed to address the issues and the principles of estimation theory, testing of hypothesis and multivariate analysis.

PREREQUISITE

S- Strong; M-Medium; L-Low

SYLLABUS RANDOM VARIABLES

Random variables — Probability function - Standard Distributions - Binomial, Poisson, Geometric, Uniform, Exponential, Normal distributions and their applications.

ESTIMATION THEORY

Sampling distributions – Estimation of parameters (consistent and unbiased) – Point and interval estimates for population proportions, mean and variance - Maximum likelihood estimate method - Method of moments - Curve fitting by principle of least squares – Regression lines.

TESTING OF HYPOTHESIS

Hypothesis testing – Small samples/Large Samples – Tests concerning proportion, means, standard deviations – Tests based on chi square – Non-parametric test – Sign test, Wilcoxon signed rank test, Mann-Whitney test, Run test, Kolmogorov – Smirnov test, Spearman's and Kendall's test.

DESIGN OF EXPERIMENT: Experimental design - Analysis of variance - Methods for one, two factor models,

- 2^k Factorial Design - Confounding in Factorial Design - Fractional Factorial Design - Response Surface Methods

- Central Composite Design

MULTIVARIATE ANALYSIS Random vectors and matrices – Mean vectors and covariance matrices – Multivariate normal density and its properties – Principal components - Population principal components – Principal components from standardized variables

COURSE DESIGNERS

Course Code	Course Title	Category	L	Т	Р	С
	RESEARCH METHODOLOGY AND IPR	FC-HS	2	0	0	2

Course Outcomes:

At the end of this course, students will be able to

- 1. Understand research problem formulation.
- 2. Analyze research related information.
- 3. Follow research ethics.
- 4. Technology, but tomorrow world will be ruled by ideas, concept, and creativity.
- 5. Understanding that when IPR would take such important place in growth of individuals & nation, it is needless to emphasis, the need of information about Intellectual Property Right to be promoted among students in general & Engineering in particular.
- 6. Understand that IPR protection provides an incentive to inventors for further research work and investment in R & D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.

UNIT I- RESEARCH PROBLEM AND SCOPE FOR SOLUTION

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations

UNIT II- FORMAT

Effective literature studies approaches, analysis, Plagiarism, Research ethics. Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee

UNIT III- PROCESS AND DEVELOPMENT

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, patenting under PCT.

UNIT IV- PATENT RIGHTS

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications.

UNIT V- NEW DEVELOPMENTS IN IPR

New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Wire cut EDM - Electro chemical machining – ECG - Electric discharge machining – construction – principle – types – control - circuits – tool design – merits, demerits & applications.

NEWER MACHINING PROCESS - III

Laser beam machining – Electron beam machining – Plasma arc machining – Ion beam machining – construction working principle types – process parameter – derivations –problems, merits, demerits and applications.

FABRICATION OF MICRO DEVICES

Semiconductors – films and film depurification – Oxidation - diffusion – ion implantation –etching – metallization – bonding – surface and bulk machining – LIGA Process – Solidfree form fabrication

MICROFABRICATION TECHNOLOGY

Wafer preparation – monolithic processing – moulding – PCB board hybrid & mcmtechnology – programmable devices & ASIC – electronic material and processing–stereolithography SAW devices, Surface Mount Technology.

## deformation– Strengthening mechanisms, work hardening, solid solutioning, grain boundary strengthening, precipitation hardening and dispersion strengthening. Effect of temperature, strain and strain rate on plastic behaviour – Super plasticity. – Deformation of non-crystalline materials.

#### FRACTURE BEHAVIOUR

Griffith's theory, stress intensity factor and fracture toughness – Toughening mechanisms – Ductile, brittle transition in steel – High temperature fracture, creep – Larson Miller parameter – Deformation and fracturemechanism maps – Fatigue, low and high cycle fatigue test, crack initiation and propagation mechanisms. Effect of surface and metallurgical parameters on fatigue – Fracture of non-metallic materials – Failure analysis, sources of failure, procedure of failure analysis.

#### SELECTION OF MATERIALS

Motivation for selection, cost basis and service requirements – Selection for mechanical properties, strength, toughness, fatigue and creep – Selection for surface durability corrosion and wear resistance – Relationship between materials selection and processing – Case studies in materials selection with relevance to aero, auto, marine, machinery and nuclear applications – Computer aided materials selection.

#### MODERN METALLIC MATERIALS

Dual phase steels, High strength low alloy (HSLA) steel, Transformation induced plasticity (TRIP) Steel, Maraging steel, Nitrogen steel – Intermetallics, Ni and Ti aluminides – smart materials, shape memory alloys –Metallic glass and nano crystalline materials.

#### NONMETALLIC MATERIALS

Polymeric materials – Formation of polymer structure – Production techniques of fibers, foams, adhesives and coating – structure, properties and applications of engineering polymers – Advanced structural ceramics, WC, TIC, TaC, Al₂O₃, SiC, Si₃N₄, CBN and diamond – properties, processing and applications.

WELDIN	IG META	ALLUR	GY AN	D DES	SIGN										

Heat affected Zone and its characteristics – Weldability of steels, cast iron, stainless steel, aluminum, Mg, Cu, Zirconium and titanium alloys – Carbon Equivalent of Plain and alloy steels Hydrogen embrittlement – Lamellar tearing – Residual stress – Distortion and its control. Heat transfer and solidification - Analysis of stresses in welded structures – pre and post welding heat treatments – weld joint design – welding defects – Testing of weldment.

#### RECENT TRENDS IN WELDING

Friction welding, friction stir welding – explosive welding – diffusion bonding – high frequency induction welding – ultrasonic welding – electron beam welding – Laser beam welding –Plasma welding – Electroslag welding- narrow gap, hybrid twin wire active TIG – Tandem MIG- modern brazing and soldering techniques – induction, dip resistance, diffusion processes – Hot gas, wave and vapour phase soldering. Overview of automation of welding in aerospace, nuclear, surface transport vehicles and under water welding.

#### CONCEPTS OF METROLOGY

Terminologies – Standards of measurement – Errors in measurement – Interchangeability and Selective assembly – Accuracy and Precision – Calibration of instruments – Basics of Dimensional metrology and Form metrology.

#### MEASUREMENT OF SURFACE ROUGHNESS

Definitions – Types of Surface Texture: Surface Roughness Measurement Methods Comparison,

Contact and Non-Contact type roughness measuring devices, 3D Surface Roughness Measurement, NanoLevel Surface Roughness Measurement – Instruments.

#### INTERFEROMETRY

Introduction, Principles of light interference – Interferometers – Measurement and Calibration – Laser Interferometry.

#### MEASURING MACHINES AND LASER METROLOGY

Tool Makers Microscope – Microhite – Coordinate Measuring Machines – Applications – Laser

Micrometer, Laser Scanning gauge, Computer Aided Inspection techniques - In-process inspection, Machine Vision system- Applications.

#### IMAGE PROCESSING FOR METROLOGY

Overview, Computer imaging systems, Image Analysis, Preprocessing, Human vision system, Image model, Image enhancement, gray scale models, histogram models, Image Transforms – Examples.

#### CAM LABORATORY

- 1. Exercise on CNC Lathe: Plain Turning, Step turning, Taper turning, Threading, Grooving & canned cycle
- 2. Exercise on CNC Milling Machine: Profile Milling, Mirroring, Scaling & canned cycle
- 3. Study of Sensors, Transducers & PLC: Hall-effect sensor, Pressure sensors, Straingauge, PLC, LVDT, Load cell, Angular potentiometer, Torque, Temperature & Optical Transducers.

#### CAD LABORATORY

2D modeling and 3D modeling of components such as

- 1. Bearing
- 2. Couplings
- 3. Gears
- 4. Sheet metal components
- 5. Jigs, Fixtures and Die assemblies

COMPUTER INTEGRATED					
MANUFACTURING					
SYSTEMS	CC	3	0	0	3

Preamble

The students completing this course are expected to understand the nature and role of computers in manufacturing. The course includes computer aided design, Automatic Manufacturing Systems, Group Technology and FMS, computer aided process planning techniques, shop floor control, types of process control and automatic data capture systems. It exposes the students to various current trends followed in the industries.

## Prerequisite

Course Objectives									
1 To understand the importance of CAD and CAM.	1 To understand the importance of CAD and CAM.								
2 To enable student to learn about Automated Manufacturing Systems.									
3 To understand about the Group Technology and FMS.									
4 To gain knowledge about Process Planning.	4 To gain knowledge about Process Planning.								
5 To enable students to learn about types of process control and automatic data capture.									
Course Outcomes: On the successful completion of the course, students will be	e able to								
Explain the basic concepts of Computer Aided									
CO1 Design and Manufacturing.	Understand								
Explain the basics, working principles of various components of Automated Manufacturing Systems.	of Understand								
CO3 Apply the concepts of Group technology and FMS.	Apply								
CO4 Apply the concepts of process planning techniques.	Apply								
Analyze the functions of various types of process control and									
CO5 automatic data capture.	Analyze								
Mapping with Programme Outcomes and Programme Specific Outcomes

#### INTRODUCTION

Introduction to CAD, CAM, CAD/CAM and CIM - Evolution of CIM – CIM wheel and cycle – Production concepts and mathematical models – Simple problems in production models – CIM hardware and software – Major elements of CIM system – Three step process for implementation of CIM – Computers in CIM – Computer networks for manufacturing – The future automated factory – Management of CIM – Impact of CIM on personnel – CIM status.

#### AUTOMATED MANUFACTURING SYSTEMS

Automated production line – system configurations, work part transfer mechanisms – Fundamentals of Automated assembly system – System configuration, Part delivery at workstations – Design for automated assembly – Overview of material handling equipments – Consideration in material handling system design – The 10 principles of Material handling. Conveyor systems – Types of conveyors – Operations and features.

Automated Guided Vehicle system – Types of vehicles and AGVs applications – Vehicle guidance technology – Vehicle management and safety.

Storage system performance – storage location strategies – Conventional storage methods and equipments – Automated storage/Retrieval system and Carousel storage system

Deadlocks in Automated manufacturing systems – Petrinet models – Applications in Dead lock avoidance.

#### GROUP TECHNOLOGY AND FMS

Part families – Visual – Parts classification and coding – Production flow analysis – Grouping of parts and Machines by rank order clustering method – Benefits of GT – Case studies.

FMS – Components – workstations – FMS layout configurations – Computer control systems – FMS planning and implementation issues – Architecture of FMS – flow chart showing various operations in FMS – Machine cell design – Composite part concept, Holier method, Key machine concept – Quantitative analysis of FMS – Bottleneck model – Simple and complicated problems – Extended Bottleneck model - sizing the FMS – FMS applications, Benefits.

#### PROCESS PLANNING

Process planning – Activities in process planning, Informations required. From design to process planning – classification of manufacturing processes – Selection of primary manufacturing processes – selecting among casting process, forming process and machining process. Sequencing of operations according to Anteriorities – various examples – forming of Matrix of Anteriorities – case study.

Typical process sheet – case studies in Manual process planning.

Computer Aided Process Planning – Process planning module and data base – Variant process planning– Two stages in VPP – Generative process planning – Flow chart showing various activities in generative PP – Semi generative process planning.

#### TYPES OF PROCESS CONTROL AND AUTOMATIC DATA CAPTURE

Introduction to process model formulation – linear feedback control systems – Optimal control –Adaptive control –Sequence control and PLC. Computer process control – Computer process interface

– Interface hardware – Computer process monitoring – Direct digital control and Supervisory computercontrol.

#### INTRODUCTION

Manufacturing Processes-objectives of manufacturing processes-classification of manufacturing process-Objectives of Tool design-tool design process- Nature and scope of Tool engineering principles of economy for tooling-problems of economy in tooling-planning and tooling for economy

Manufacturing principles applicable to process and tool planning-tool control-tool maintenance-tool materials and its selection.

#### TOOLING FOR METAL REMOVAL PROCESSES

Traditional machining processes -work and tool holding devices-tool nomenclatures Mechanism of machining-force temperature and tool life of single point tool-multipoint tools -tool design-tool wear special processes-capstan and turret lathe-tooling layout of automats-tooling in NC and CNC machines-tooling for machining centres-CAD in tool design- Jigs and fixtures-design-Non-traditional material removal processes mechanical, electrical thermal and chemical energy processes-principles operation equipment-tooling parameters- Advantages, disadvantages and Applications.

#### TOOLING FOR METAL FORMING PROCESSES

Classification of Forming processes- Types of presses-design of -blanking and piercing dies-simple, compound, combination and progressive dies- Drawing dies - Bending dies-forging dies-plastic moulding dies. Applications of dies.

#### TOOLING FOR METAL CASTING AND METALJOINING PROCESSES

Tools and Equipment for moulding-patterns– pattern allowances – pattern construction-die casting toolsmechanization of foundries. Tooling for Physical joining processes Design of welding fixtures –Arc welding, Gas welding, Resistance welding, laser welding fixtures- Tooling for Soldering and Brazing Tooling for Mechanical joining processes.

#### TOOLING FOR INSPECTION AND GAUGING

Survey of linear and angular measurements-standards of measurement-design and manufacturing of gauges- measurement of form- Inspection bench centre-co-ordinate measuring machine-tooling ir CMM. Applications of CMM.

#### FUNDAMENTALS OF METAL WORKING

Classification of Forming Process, Mechanics of Metal working, Flow Stress determination, Temperature in Metalworking, influence of Friction and Lubrication.

#### FORGING

Classification of Forging process, Forging equipments, open and closed die forging, Calculation of forging loads, Forging defects.

#### ROLLING

Classification of Rolling process, Rolling mills, Hot-Rolling, Cold-Rolling, Forces and Geometrical Relationship in rolling, Rolling defects.

#### EXTRUSION AND DRAWING

Classification, Process parameters, equipment used, Lubrication and Defects in extrusion process, Analysis of the extrusion process, Hydrostatic extrusion, extrusion of tubing–Defects– applications. Rod and wire drawing, Analysis of wire drawing, Applications.

#### ADVANCEMENTS IN METAL FORMING

Forming Methods, Shearing and blanking, Bending, Stretch forming, Deep drawing, Forming Limit Criteria, Defects, Explosive forming, Electro hydraulic forming, magnetic pulse forming, super plastic forming, electro forming – fine blanking HERF- LASER beam forming-Application of powder metallurgy in forming.

# INTRODUCTION TO OPTIMIZATION

Formulation of an optimization problem- Classification of optimization problem – optimization techniques-Classical optimization technique – Single variable optimization – Multi variable optimization algorithms.

# MINIMIZATION METHODS

One dimensional minimization method: unimodal function – elimination methods: unrestricted search, exhaustive search, Dichotomous search, Fibonacci methods, Golden section methods. Interpolation methods: Quadratic and cubic interpolation methods.

# CONSTRAINED OPTIMIZATION TECHNIQUES

Optimization with equality and inequality constraints - Direct methods – Indirect methods using penalty functions, Lagrange multipliers - separable programming and Geometric programming.

# UNCONSTRAINED OPTIMIZATION TECHNIQUES

Multi variable unconstrained optimization techniques: Direct search methods: Random search method, univariate method, pattern search method, steepest descent method and Conjugate gradient method.

# APPLICATIONS OF HEURISTICS IN OPTIMIZATION

Heuristics-Introduction-Multi objective optimization: Genetic algorithms and Simulated Annealing techniques; Neural network & Fuzzy logic principles in optimization.

# SYLLABUS

# INTRODUCTION TO MICRO MACHINING

Need-evolution- fundamentals and trends in micro technologies- Consequences of the technology and society - challenges to manufacturing technologyevolution of precision in manufacturing, tooling and current scenario - Micro materials, fabrication tools, requirements and applications.

# TRADITIONAL MACHINING

Theory of micro machining – Chip formation – Size effect in micro machining – Micro turning - Micro milling - Micro drilling - Micro machining tool design – Precision Grinding – Partial ductile mode grinding – Ultra precision grinding.

# ADVANCED MICRO MACHINING

Introduction-Classification - Mechanical Micromachining (AJM, USM)-Thermal Micromachining (EDM, LBM, EBM)-Electrochemical and Chemical Micromachining-Ion Beam Machining-Photochemical Etching.

# ABRASIVE BASED MICRO MACHINING

Abrasive Flow Finishing (AFF) -Magnetic Abrasive Finishing (MAF)- Magnetorheological Finishing - Magnetorheological Abrasive Flow Finishing- Elastic Emission Machining (EEM) and Magnetic Float Polishing.

#### MEMS

Introduction to MEMS, Definitions and classifications-History – applications - MEMSMarket - Bulk Micro machining - Wet and Dry Etching - Surface Micromachining – Chemical – Vapor Deposition – Lithography - Wafer Bonding.

Definition – reliability vs quality, reliability function – MTBF, MTTR, availability, bathtub curve – time dependent failure models – distributions – normal, weibull, lognormal – Reliability of system and models – serial, parallel and combined configuration – Markove analysis, load sharing systems, standby systems, covarient models, static models, dynamic models.

#### DESIGN FOR RELIABILITY AND MAINTAINABILITY

Reliability design process, system effectiveness, economic analysis and life cycle cost, reliability allocation, design methods, parts and material selection, derating, stress-strength and analysis, failure analysis, identification determination of causes, assessments of effects, computation of criticality index, corrective action, system safety – analysis of down-time – the repair time distribution, stochastic point processes system repair time, reliability under preventive maintenance state dependent system with repair. MTTR – mean system down time, repair vs replacement, replacement models, proactive, preventive, predictive maintenance maintainability and availability, optimization techniques for system reliability with redundancy heuristic methods applied to optimal system reliability.

# INTRODUCTION

Fundamentals – Initial, boundary and eigen value problems – weighted residual, Galerkin and Raleigh Ritz methods - Integration by parts – Basics of variational formulation – Polynomial and Nodal approximation.

# ONE DIMENSIONAL ANALYSIS

Steps in FEM – Discretization. Interpolation, derivation of elements characteristic matrix, shape function, assembly and imposition of boundary conditions-solution and post processing- One dimensional analysis in solid mechanics and heat transfer.

# SHAPE FUNCTIONS AND HIGHER ORDER FORMULATIONS

Shape functions for one and two dimensional elements- Three nodded triangular and four nodded quadrilateral element Global and natural co-ordinates—Nonlinear analysis – Isoparametric elements –Jacobian matrices and transformations – Basics of two-dimensional, plane stress, plane strain andaxisymmetric analysis.

# COMPUTER IMPLEMENTATION

Pre-Processing, mesh generation, elements connecting, boundary conditions, input of material and processing characteristics – Solution and post processing – Overview of application packages – Development of code for one dimensional analysis and validation.

# ANALYSIS OF PRODUCTION PROCESSES

FE analysis of metal casting – special considerations, latent heat incorporation, gap element – Timestepping procedures – Crank – Nicholson algorithm – Prediction of grain structure – Basic concepts of plasticity and fracture – Solid and flow formulation – small incremental deformation formulation – Fracture criteria – FE analysis of metal cutting, chip separation criteria, incorporation of strain rate dependency – FE analysis of welding.

SYLLABUS								
INTDODUCTION								
INTRODUCTION	• -				-		4.44	
Concepts of human factors engineering and ergon				•	m and	design	philoso	ophy –
				•	em and	design	philoso	ophy –

Physical dimensions of the human body as a working machine – Motion size relationships – Static and dynamic anthropometry – Anthropometric aids – Design principles – Using anthropometric measures for industrial design – Procedure for anthropometric design.

#### DESIGN OF SYSTEMS

Displays – Controls – Workplace – Seating – Work process – Duration and rest periods – Hand tool design – Design of visual displays – Design for shift work.

# ENVIRONMENTAL FACTORS IN DESIGN

Temperature – Humidity – Noise – Illumination –Vibration – Measurement of illumination and contrast – use of photometers – Recommended illumination levels. The ageing eye – Use of indirect (reflected) lighting – cos efficiency of illumination – special purpose lighting for inspection and quality control – Measurement of sound – Noise exposure and hearing loss – Hearing protectors – analysis and reduction of noise – Effects of Noise or performance – annoyance of noise and interference with communication – sources of vibration discomfort.

#### WORK PHYSIOLOGY

Provision of energy for muscular work – Role of oxygen physical exertion – Measurement of energy expenditure Respiration – Pulse rate and blood pressure during physical work – Physical work capacity and its evaluation.

#### CONCEPTS OF LEAN MANUFACTURING

Lean process, 3M concept, Key principles and implications of lean manufacturing, Traditional vs Lean manufacturing characteristics, Roadmap for Lean implementation and Lean benefits, Study of Ford and Toyota production system, JIT manufacturing, Lean building blocks.

#### ADDING VALUE AND REDUCTION OF WASTE

Value creation and waste elimination, Types of waste, Pull production and different models, The Kanban system, Continuous flow and Continuous improvement process, Kaizen - Worker involvement, Design of Kanban quantities, Leveled production, Tools for continuous improvement.

#### JIT, COMPOSITE PART AND CASE STUDIES

JIT with cell manufacturing, Part families, Production flow analysis, Composite part concept, Machine cell design, Quantitative analysis, Case studies, Single piece flow.

#### VALUE STREAMING AND SIX SIGMA

The value stream – Benefits and Mapping process. The Current state map– Mapping icons, Mapping steps, VSM exercises, TAKT time calculations. Six Sigma – Definition, Statistical considerations, Variability reduction, Design of experiments, Six Sigma implementation.

#### WORK SEQUENCE, MISTAKE PROOFING AND WASTE ELIMINATION

Standardized work – Standard work sequence, Timing and working progress. Quality at source – Automation / JIDOKA, Visual management system, Mistake proofing / Poka-Yoke. 5S technique – Elements and waste elimination through 5S, Advantages and Benefits, 5S Audit. Visual control aids for improvement, Flexible work force.

### MANAGEMENT OF STORES AND LOGISTICS

Stores function – Location – Layout – Stock taking – Materials handling – Transportation – Insurance – Codification – Inventory pricing – stores management – safety – warehousing – Distribution linearprogramming – Traveling Salesman problems – Network analysis – Logistics Management.

#### **MATERIALS PLANNING**

Forecasting – Materials requirements planning – Quantity – Periodic – Deterministic models – Finite production.

#### INVENTORY MANAGEMENT

ABC analysis – Aggregate planning – Lot size under constraints – Just in Time (JIT) system.

Future Directions of MEMS.

MATERIALS AND FABRICATION PROCESSES

Structure of silicon and other materials, - Mechanical properties of Si, Silicon Compounds silicon piezo resistors, Galium arsenide, quartz, polymers for MEMS. Silicon wafer processing - Bulk micromachining and Surface micromachining, Wafer-bonding. Thin-film deposition, Lithography, wet etching and dry etching. LIGA and other moulding techniques- Soft lithography and polymer processing- Thick-film processing; Low temperature co-fired ceramic processing- Smart material processing.

# MICRO SENSORS AND MICRO-ACTUATORS

Micro sensors - Basic principles and working of micro sensors- Acoustic wave micro sensors. Bio- medical micro sensors- Bio-sensors- Chemical micro sensors – Optical Sensors – Pressure micro sensors- Thermal micro sensors-acceleration micro sensors; Micro actuators - Basic principles and working of micro actuators-Electrostatic micro actuators- Piezoelectric micro actuators- Thermal micro actuators- SMA micro actuators-Electromagnetic micro actuators, micro valves, micro pumps.

### SCIENCE OF NANO MATERIALS

Classification of nano structures – effect of the nanometer length scale effects of nano scale dimensions on various properties – structural, thermal, chemical, mechanical, magnetic, optical and electronic properties – effect of nanoscale dimensions on biological systems. Fabrication methods – Nanoparticles, Sol-Gel Synthesis, Inert Gas Condensation, High energy Ball Milling, Plasma Synthesis, Electro deposition and other techniques. Synthesis of Carbon nano tubes – Solid carbon source-based production techniques – Gaseous carbon source-based production techniques. Top down processes – bottom up process.

# CHARACTERIZATION OF NANO MATERIALS

Nano-processing systems – Nano measuring systems – characterization – analytical imaging techniques – microscopy techniques, electron microscopy scanning electron microscopy, transmission electron microscopy, scanning tunneling microscopy, atomic force microscopy, diffraction techniques – spectroscopy techniques – Raman spectroscopy, 3D surface analysis – Mechanical, Magnetic and thermal properties – Nano positioning systems.

Principle of MPT, procedure used for testing a component, Equipment used for MPT, Magnetizing techniques, Applications. Principle of Thermography, Infrared Radiometry, Active thermography measurements, Applications – Imaging entrapped water under an epoxy coating, Detection of carbon fiber contaminants.

#### ULTRASONIC TESTING & RADIOGRAPHY

Principle, Ultrasonic transducers, Ultrasonic Flaw Detection Equipment, Modes of display A- scan, B-Scan, C-Scan, Applications, Inspection Methods - Normal Incident Pulse-Echo Inspection, Normal Incident Throughtransmission Testing, Angle Beam Pulse-Echo testing, Applications of Normal Beam Inspection in detecting fatigue cracks, Inclusions, Slag, Porosity and Intergranular cracks. Principle of Radiography, Effect of radiation on Film, Radiographic imaging, Inspection Techniques- Single wall single image, Double wall Penetration Multiwall Penetration technique, Real Time Radiography.

#### CASE STUDIES, COMPARISON AND SELECTION OF NDT METHODS

Case studies on defects in cast, rolled, extruded, welded and heat-treated components. Comparison and selection of various NDT techniques. Codes, standards, specification and procedures.

### Introduction

Need - Development of AM systems – AM process chain - Impact of AM on Product Development - Virtual Prototyping- Rapid Tooling – RP to AM -Classification of AM processes-Benefits- Applications

# **Reverse Engineering and CAD modelling**

Basic concept- Digitization techniques – Model reconstruction – Data Processing for Rapid Prototyping: CAD model preparation, Data requirements – Geometric modelling techniques: Wire frame, surface and solid modelling – data formats - Data interfacing, Part orientation and support generation, Support structure design, Model Slicing, Tool path generation-Software for AM- Case studies.

#### Liquid based and solid based Additive Manufacturing systems

Stereolithography Apparatus (SLA): Principle, pre-build process, part-building and post-build processes, photo polymerization of SL resins, part quality and process planning, recoating issues, materials, advantages, limitations and applications.

Solid Ground Curing (SGC): working principle, process, strengths, weaknesses and applications. Fused deposition Modelling (FDM): Principle, details of processes, process variables, types, products, materials and applications. Laminated Object Manufacturing (LOM): Working Principles, details of processes, products, materials, advantages, limitations and applications -Case studies

#### Powder based Additive Manufacturing systems

Selective Laser Sintering (SLS): Principle, process, Indirect and direct SLS- powder structures, materials, post processing, surface deviation and accuracy, Applications. Laser Engineered Net Shaping (LENS): Processes, materials, products, advantages, limitations and applications– Case Studies.

# Other Additive Manufacturing systems

Three dimensional Printing (3DP): Principle, basic process, Physics of 3DP, types of printing, process capabilities, material system. Solid based, Liquid based and powder based 3DP systems, strength and weakness, Applications and case studies. Shape Deposition Manufacturing (SDM), Ballastic Particle Manufacturing (BPM), Selective Laser Melting, Electron Beam Melting.

whiskers; Properties of reinforcing materials; Matrix materials; Additives; Properties of FRP materials; Applications.

### MANUFACTURING PROCESSES

Open mold processes – Hand layup, Spray up, Vacuum bag, Pressure bag & autoclave, Centrifugal casting,

Filament winding; Closed mold processes – Compression molding, Resin transfer molding (RTM), Injection molding, Pultrusion; SMC & DMC products, etc.

# MACROMECHANICAL BEHAVIOR OF FIBRE REINFORCED PLASTICS

Design variables; Selection of fiber-matrix and manufacturing process; Effects of mechanical, thermal,

electrical and environmental properties, Fiber orientation, Symmetric and asymmetric structure; Effects of

unidirectional continuous and short fibers; Lamination theory; Failure theories.

#### MICROMECHANICAL BEHAVIOR OF FIBRE REINFORCED PLASTICS

Strengthening methods, Elasticity of fibre composites, Plasticity and fracture of composites, Crack

propagation in fibre composites, Failure under compressive loads.

#### MATERIAL MODELS

Law of Mixtures, Shear lag model, Laminated plate model, Eshelby's models, Other models.

# INTRODUCTION

Introduction to Engineering Design – Various phases of systematic design – sequential engineering and concurrent engineering – Computer hardware & Peripherals – software packages for design and drafting. Concept of CAD as drafting and designing facility, desirable features of CAD package, drawing.

# COMPUTER GRAPHICS AND IT'S APPLICATIONS

Computer graphics – applications – principals of interactive computer graphics – 2D 3D transformations – projections – curves - Geometric Modeling – types, Graphics standards –assembly modeling – use of software packages.

# PRODUCT DESIGN CONCEPTS AND PRODUCT DATA MANAGEMENT

Understanding customer needs – Product function modeling – Function trees and function structures– Product tear down methods – Bench marking – Product portfolio – concept generation and selection – Product Data Management – concepts – Collaborative product design–manufacturing planning factor – Customization factor – Product life cycle Management.

# PRODUCT DESIGN TOOLS & TECHNIQUES

Product modeling – types of product models; product development process tools – TRIZ – Altshuller's inventive principles – Modeling of product metrics – Design for reliability – design for manufacturability– machining, casting, and metal forming – design for assembly and disassembly.

# PRODUCT ARCHITECTURE AND DESIGN TECHNIQUES

Product development management - establishing the architecture - creation - clustering - geometric layout development - Fundamental and incidental interactions. DOE-Taguchi method of DOE – Quality loss functions – Design for product life cycle.

# ENGINEERING MATERIALS – CONVENTIONAL

Classification of engineering materials- Metallic materials-ferrous materials-steel & cast iron and nonferrous materials – aluminium and copper. Non-Metallic materials – glasses, ceramics, Polymer and plastics – their characteristics and unique properties- Material for structural applications - Lightweight structural materials for automobiles and aero plane applications.

#### POWDER METALLURGY – POWDER SYNTHESIS

Powder Metallurgy – Near net shaping process methods and principles - chemical methods – electrochemical methods - atomization – mechanical alloying – rapid solidification – processing – Nano size powders. Powder physical and chemical characterization – process characteristics - applications.

#### **COMPOSITE MATERIALS**

Composites – Types of composites - Naturally occurring, synthetic & engineered composites - MMC – CMC – PMC - Fibre and whisker reinforced composites (continuous and discontinuous) - particulate composites layered or sheet composites, composite coating or thin fibre, inter metallic composites - properties and characteristics of composites.

#### SMART MATERIALS

Introduction to intelligent/smart materials, shape memory alloys-types, Nitinol-origin, properties, martensitic transformation, Memorization process- applications-medical, satellite.

#### NANO MATERIALS

Nanomaterials-Definition, Classification of Nanostructured materials, causes of interest in nanomaterials, applications of nanomaterials. Processes for producing ultrafine powders-mechanical grinding, wet chemical synthesis of nanomaterials. Gas phase synthesis of Nano materials, gas condensation processes, chemical vapour condensation, laser ablation.

#### WORK STUDY

Method study – Principles of motion economy – steps in method study – Tool and Techniques – Work measurement – Purpose – stop watch time study – Production studies – work sampling – Ergonomics – Value analysis.

#### PROCESS PLANNING AND FORECASTING

Process planning – Aims of process planning – steps to prepare the detailed work sheets for manufacturing a given component – Break even analysis – Forecasting – Purpose of forecasting – Methods of forecasting – Time series – Regression and Correlation – Exponential smoothing – Forecast errors.

#### PRODUCTION PLANNING & CONTROL, SCHEDULING AND PROJECT MANAGEMENT

Steps in PPC process mapping, preparation of process mapping and feedback control for effective monitoring. Aggregate production planning, production planning strategies, Disaggregating the aggregate plan, Materials Requirement Planning (MRP), MRP-II, Supply chain management, Operation scheduling, prioritization. Scheduling – Priority rules scheduling – sequencing – Johnson's algorithm for job sequencing – n job M machine problems – Project Network analysis – PERT/CPM – Critical path –Floats – Resource leveling – Queuing analysis. **PERSONNEL AND MARKETING MANAGEMENT** 

Principles of Management – Functions of personnel management – Recruitment – Training – Motivation – Communication – conflicts – Industrial relations – Trade Union – Functions of marketing – Sales promotionmethods – Advertising – Product packaging – Distribution channels – Market research and techniques.

# INTRODUCTION

Basic concept of system – elements of manufacturing system – concept of simulation – simulation as a decision-making tool – types of simulation – system modeling – types of modeling.

# **RANDOM NUMBERS**

Probability and statistical concepts of simulation – Pseudo random numbers – methods of generating random numbers – discrete and continuous distribution – testing of random numbers – sampling – simple, random and simulated.

# DESIGN OF SIMULATION EXPERIMENTS

Problem formulation – data collection and reduction – time flow mechanical – key variables – logic flow chart starting condition – run size – experimental design consideration – output analysis, interpretation and validation –application of simulation in engineering industry.

# ANALYSIS OF SIMULATION DATA

Input Modelling: Data collection, Identification and distribution with data, parameter estimation, Goodness of fittests, Selection of input models without data, Multivariate and time series analysis. Verification and Validation of Model – Model Building, Verification, Calibration and Validation of Models.

# QUEUING POLICIES, ALGORITHMS AND CASE STUDIES

Introduction to basic Single – pass heuristics, meta-heuristics and applications – Application of Genetical gorithms and Ant colony-based algorithms in Discrete event simulation models with simple examples.

#### Micro and Crystal Structure Analysis

Principles of Optical Microscopy – Specimen Preparation Techniques – Polishing and Etching – Polarization Techniques – Quantitative Metallography – Estimation of grain size – ASTM grain size numbers – Microstructure of Engineering Materials - Elements of Crystallography – X- ray Diffraction, Bragg's law – Techniques of X-ray Crystallography, Debye ,Scherer camera – Geiger Diffractometer-analysis of Diffraction patterns – Inter planer spacing – Identification of Crystal Structure, Elements of Electron Diffraction.

#### Electron Microscopy

Scanning Electron Microscopy (SEM) - Introduction, Instrumentation, Contrast formation, Operational variables, Specimen preparation, imaging modes, Applications, Limitations.

#### Chemical and Thermal Analysis

Basic Principles, Practice and Applications of X-Ray Spectrometry, Wave Dispersive X-Ray Spectrometry, Auger Spectroscopy, Secondary Ion Mass Spectroscopy, Fourier Transform Infra-Red Spectroscopy (FTIR)- Proton Induced X-Ray Emission Spectroscopy, Differential Thermal Analysis, Thermo Gravity metric Analysis (TGA), Differential Scanning Calorimetry (DSC).

#### Mechanical Testing – Static Tests

Codes and standards for testing metallic and composite materials. Hardness – Brinell, Vickers, Rockwell and Micro Hardness Test, Tensile Test – Stress – Strain plot – Proof Stress, Torsion Test - Ductility Measurement – Impact Test – Charpy & Izod – DWTT - Fracture Toughness Test.

#### Mechanical Testing – Dynamic Tests

Fatigue – Low & High Cycle Fatigues, Rotating Beam & Plate Bending HCF tests – S-N curve – LCF tests – Crack Growth studies – Creep Tests – LM parameters – AE Tests modal analysis - Applications of Dynamic Tests.

#### Introduction

Introduction to Mechatronics-systems – Mechatronics approach to modern engineering and design – History of Mechatronics-Scope and Significance of Mechatronics systems- Elements of Mechatronics systems-Subsystems of Mechatronics -Emerging areas of Mechatronics-Classification of Manufacturing based on Mechatronics- Need and benefits of Mechatronics in Manufacturing.

# Sensors and Transducers

Introduction – Performance Terminology – Potentiometers – Strain gauges – LVDT – Eddy current sensor – Hall effect sensor – Resistive Transducers – Inductive Transducers-Capacitance Transducers – Digital transducers – Temperature sensors – Optical sensors – Piezo electric sensor-Ultrasonic sensors – Proximity sensors – Chemical and Gas Sensors-Signal processing techniques.

**Drives and Actuators** 

Classification of actuators-Role of Linear and Rotary Actuators – Electrical actuators – Servo motors and Stepper motors -Piezoelectric actuators-Solenoids-D.C. Motors–Function of Drives-Solid state relays-MechanicalSwitching Devices-Interfacing with microcontroller through H-bridge Circuits.

Microprocessors and Microcontrollers

Introduction – Requirement for Processor – Comparison of 8085 Microprocessor and 8051 Microcontrollers– 8051 Microcontrollers Architecture, PIC Microcontrollers (16f xxx) series – Assembly language programming-Instruction sets, Instruction format, Addressing modes, Basic programing-Interfacing-Sensors, Keyboards, LCD, LED, A/D and D/A Converters-Actuators – Embedded Systems RS 232 serial communication interface, classification of memories.

#### Mechatronic Systems

Design Process-Stages of design in mechatronics systems – Traditional and Mechatronics design concepts – Case studies – Pick and place robots, Automatic car parking system, Automatic camera, Automatic washing machine, Engine management system, Machinery automation.

#### BULK SYNTHESIS AND CHEMICAL APPROACHES

Top down and bottom up approaches–Mechanical alloying and mechanical ball milling- Mechano chemical process, Inert gas condensation technique – Arc plasma and laser ablation, Sol gel processing-Solvo thermal, hydrothermal, precipitation, Spray pyrolysis, Electro spraying and spin coating routes, Self-assembly, self-assembled monolayers (SAMs). Langmuir-Blodgett (LB) films, micro emulsion polymerization- templated synthesis, pulsed electrochemical deposition.

#### PHYSICAL APPROACHES

Vapor deposition and different types of epitaxial growth techniques (CVD, MOCVD, MBE, ALD)- pulsed laser deposition, Magnetron sputtering - lithography: Photo/UV/EB/FIB techniques, Dip pen nanolithography, Etching process: Dry and Wet etching, micro contact printing.

#### NANOPOROUS MATERIALS

Zeolites, mesoporous materials, nanomembranes - Carbon nanotubes and graphene - Core shell and hybrid nanocomposites.

#### **APPLICATION OF NANOMATERIALS**

Overview of nanomaterials properties and their applications, Molecular Electronics and Nanoelectronics – Nanobots- Biological Applications – Quantum Devices – Nanomechanics - Photonics- Nano structures as single electron transistor –principle and design.

#### INTRODUCTION TO PROCESS PLANNING

Introduction- methods of process planning-Drawing Interpretation-Material evaluation – steps inprocess selection-. Production equipment and tooling selection– Types of chart techniques.

#### INTRODUCTION TO COST ESTIMATION

Estimation of Different Types of Jobs - Cost estimation: Importance and aims of cost estimation - functions of estimation - difference between estimating and costing - importance of preparing realistic estimates - estimating procedure. Elements of cost, Objectives.

#### COST ESTIMATION CONCEPT

Elements of costs - ladder of cost - determination of material cost - labour cost - expenses. Analysis of overhead expenses, Distribution of overhead costs – depreciation - causes of depreciation - methods of calculating depreciation.

#### MACHINING COST ESTIMATION

Estimation of machining time, Calculation of machining time for lathe operations-estimation of drilling time on drilling machine - estimation of time for shaping, planning, milling and grinding.

#### PRODUCTION COST ESTIMATION

Costing for metal forming and fabrication processes, Estimation of cost in welding- Estimation in forging shop - cost estimation of foundry work.

# PRODUCT DEVELOPMENT AND CONCEPT SELECTION

Significance of product design, product design and development process, sequential engineering design method, the challenges of product development – Product development organizations-Identifying the customer needs – Establishing the product specifications – concept generation – Concept selection.

# PRODUCT ARCHITECTURE

Concept Testing, Response and Interpretation. Product Architecture, Implication of the architecture – Establishing the architecture Platform planning, System level design issues. Embodiment design, Modelling.

# INDUSTRIAL AND MANUFACTURING DESIGN

Need for industrial design – Impact of industrial design – Industrial design process. Assessing the quality of industrial design- Human Engineering consideration - Estimate the manufacturing cost – Reduce the component cost – Reduce the assembly cost – Reduce the support cost – Impact of DFM decisions on other factors.

# PROTOTYPING AND ECONOMIC ANALYSIS

Principles of prototyping – Planning for prototypes - Elements of economic analysis – Base case financial model – Sensitivity analysis – Influence of the quantitative factors.

# MANAGING PRODUCT DEVELOPMENT PROJECTS

Sequential, parallel and coupled tasks - Baseline project planning – Project Budget Project execution – Project evaluation- patents- patent search-patent laws International code for patents.

#### FUNDAMENTALS OF PLM

Product data or Product information, Product lifecycle management concept, Information models and product structures-Information model, The product information (data) model, The product model, Reasons for the deployment of PLM systems.

# ENTERPRISE SOLUTION WITH PLM

Use of product lifecycle management systems in different organization verticals, Product Development and Engineering, Impact of Manufacturing with PLM Challenges of product management in Engineering and Manufacturing Industry, Life cycle thinking.

#### PLM FOR E-MANUFACTURING

Significance of product management, Collaborative Manufacturing, Integration of the PLM system with other applications: Different ways to integrate PLM systems, Transfer file, Database integration, System roles, ERP, Optimization of ERP for PLM and CAD.

#### TECHNOLOGY FORECASTING

Future mapping, invocating rates of technological change, methods of technology forecasting such as relevance trees, morphological methods and mission flow diagram, combining forecast of different technologies, uses in manufacture alternative.

#### PLM SOLUTIONS

Human resources in product lifecycle, Methods, Techniques, Phases of product lifecycle and corresponding technologies, Enterprise information, knowledge and IP, Change Process, Product Structure & Configuration, Project, Engineering Process, Information Standards, Vendors of PLM Systems and Components.

SYLLABUS PRODUCT DESIGN

Definition, History and Modern Practice – Designs; Design and Product Life Cycle; Design Process; What is a medical device, Challenges in medical device, Understanding the innovation cycle, Good Design Practice. Understanding, analyzing and validating user needs, Screening Needs, Technical Requirements, Concept Generation – Innovation Survey Questionnaire, Morphological Matrix, QFD, Concept Analysis and validation, Concept Modelling, Concept Screening & Validation.

# PRODUCT DEVELOPMENT AND REGULATORY

Breakthrough Products, Platform Products, Front End of Innovations / Fuzzy Front End, Generic Product Development Process (Concept Development, System Design, Detailed Design, Test & Refinement, Production Ramp-up), Variants of Development Processes (Market Pull, Technology Push, Platform, Process-Intensive, Customized, High-Risk, Quick Build, Complex Systems), Good Documentation Practice, Prototyping Specifications, Prototyping, Medical Device standards, Quality management systems, Medical Device Classification, Design of Clinical Trials, Design Control & Regulatory Requirements, Documentation in Medical Devices, Regulatory pathways.

# CALABLE PRODUCT DEVELOPMENT

Design for manufacturing, Design for assembly, Design for Serviceability, Design for usability, Medical Device Verification & Validation, Product Testing & Regulatory compliance, Clinical trial & validation, Device Certification.

# MANUFACTURING AND BUSINESS STRATEGIES

Lean Manufacturing – Toyota Production System, Good Manufacturing Practices, Framework for Product Strategy – Core Strategic Vision (CSV), Characteristics of good CSV, Opportunity Identification Process & Generating Opportunities, Quality of Opportunities – Real-Win-Worth It (3M RWW), Product Planning Process, Technology S-Curve, Evaluating and Prioritizing Projects, Product-Process Change Matrix, Resource Planning, Total Available Market (Segmentation, Targeting & Positioning), Served Available Market, Product Platform Strategy, Market Platform Plan (Product Platform Management, Product Line Strategy).

# PRODUCT ECONOMICS AND MARKET INFUSIONS

Economics/Finance in Product Development (Sales Forecasting – ATAR Model/ Bases Model, Pricing the product, Cash flow in Product Development, Categorizing the costs, Structuring Manufacturing Costs, Prototyping Costs, Development Costs, Cost Volume Profit Analysis, Breakeven Analysis, Common Return Metrics – Payback/ NPV/ IRR, Common Comparison Metrics – WACC/ RRR/ MARR). Business Model Canvas, Marketing Channels, Sales Models, Post Commercialization Surveillance, End of Life support.

SYLLABUS

# INTRODUCTION

The Principles of Waste Management and Waste Utilization. Waste Management Hierarchy and 3R Principle of Reduce, Reuse and Recycle. Waste as a Resource and Alternate Energy source.

# WASTE SOURCES & CHARACTERIZATION

Waste production in different sectors such as domestic, industrial, agriculture, postconsumer, waste etc. Classification of waste – agro based, forest residues, domestic waste, industrial waste (hazardous and non-hazardous). Characterization of waste for energy utilization. Waste Selection criteria.

# TECHNOLOGIES FOR WASTE TO ENERGY

Biochemical Conversion – Energy production from organic waste through anaerobic digestion and fermentation. Thermo-chemical Conversion – Combustion, Incineration and heat recovery, Pyrolysis, Gasification; Plasma Arc Technology and other newer technologies.

# WASTE TO ENERGY OPTIONS

Landfill gas, collection and recovery. Refuse Derived Fuel (RDF) – fluff, briquettes, pellets. Alternate Fuel Resource (AFR) – production and use in Cement plants, Thermal power plants and Industrial boilers. Conversion of wastes to fuel resources for other useful energy applications Energy from Plastic Wastes – Non-recyclable plastic wastes for energy recovery. Energy Recovery from wastes and optimization of its use, benchmarking and standardization. Energy Analysis.

#### CASE STUDIES - WASTE TO ENERGY PLANTS

Success/failures of waste to energy Global Best Practices in Waste to energy production distribution and use. Indian Scenario on Waste to Energy production distribution and use in India. Success and Failures of Indian Waste to Energy plants. Role of the Government in promoting 'Waste to Energy'. Waste activities – collection, segregation, transportation and storage requirements. Location and Siting of 'Waste to Energy' plants. Industry Specific Applications – In-house use – sugar, distillery, pharmaceuticals, Pulp and paper, refinery and petrochemical industry and any other industry. Centralized and Decentralized Energy production, distribution and use. Comparison of Centralized and decentralized systems and its operations.

# SYLLABUS UNIT I

# INTRODUCTION TO GREEN BUILDING DESIGN:

Universal Design: Key accessibility issues and Design guidelines - Integrated Approach for Green Building design: Factors for Site selection, Understanding the importance of Site Ecology & Site Analysis - Microclimate: Factors affecting microclimate & heat Islands - Strategies to handle heat island in built environment, Designing Green Spaces and Enhancing Biodiversity in built environment.

# UNIT II

#### WATER RESOURCE AND WASTEWATER MANAGEMENT

Rainwater harvesting and utilization, Groundwater recharge techniques: Designconsiderations - Water Balance and approach for water efficiency: 3R Approach for water efficiency – Efficiency towards waste water management - Wastewater treatment & reuse, wastewater treatment technologies.

# UNIT III

# ENERGY EFFICEINCY IN SUSTAINABLE BUILDINGS

Introduction, Performance Evaluation and Approach for Energy Efficiency in Buildings - Energy Efficiency Standards & Codes: ECBC 2017 & EPI, ASHRAE 90.1, ASHRAE 62.1, ASHRAE 55, ASHARE 170, ISHRAE 1001, Star labelling for appliances - Efficient Building Envelope: Heating loads in buildings, Building orientation and form, Envelope Heat Transfer & Material Specifications.

UNIT IV

# SUSTAINABLE BUILDING MATERIALS

Attributes of Sustainable Building Materials: Recycled content, Regional material, Renewable material, Embodied energy, Embodied carbon, Material performance, Recyclability, Elimination of hazardous materials - Waste management during construction & post-occupancy: Segregation strategies, Types of waste management – organic, inorganic, e-waste, hazardous waste.

UNIT V

# INDOOR ENVIRONMENTAL QUALITY

Indoor Air quality: Codes and Standards, Fresh air requirements, Design considerations - Approach for improving Indoor air quality: Measures to reduce sick building syndrome, Demand control ventilation, CO2 monitoring in buildings, Air quality monitoring - Enhancing occupants Comfort, Health and Wellbeing: Thermal Comfort, Visual Comfort, Acoustics, Ergonomics, Olfactory Comfort.

# PREAMBLE

The rapid development of the integrated circuit (IC) industry has led to the emergence of microelectronics process engineering as a new advanced discipline. The combination of MEMS and integrated intelligence has been put forward as a disruptive technology. Gives brief knowledge about applications of Bio-MEMS technology for therapeutics and diagnostics.

# PREREQUISITE

Nil

COUR	SE OBJECTIVES
1	To train the students in the design aspects of Bio MEMS devices and Systems.
2	To learn the basic principles of BioMEMS/Microfluidic device manufacturing.
	To make the students aware of applications in various medical specialists especially the Comparison of
3	conventions methods and Bio MEMS usage.
4	To Classify the different mechanisms of micro sensors and actuators.

On the successful completion of the course, students will be able to	
CO1 Understand the Micro fluidic Principles and study its applications.	Understand
CO2 Explain the principles and applications of Micro Total Analysis.	Understand
CO3 Discuss and realize the MEMS applications in Bio Medical Engineering	Understand
CO4 Classifying the principles of Micro Actuators and Drug Delivery system	
	Apply
CO5 Utilizing the concept of MEMS with biological applications	Analyze

# SYLLABUS INTRODUCTION

Characteristics of sunlight: the sun and its radiation, Solar radiation, Direct and diffusion radiation, greenhouse effect, solar isolation data and estimation-semiconductors and P-N junctions: semiconductors and types, absorption of light, recombination and PN junctions –behavior of solar cells – cell properties: efficiency and losses, Top contact design, Laser grooved, Buried contact solar cell – PV cell interconnection: Module and circuit design, Environmental and thermal protection.

# STAND-ALONE PV SYSTEM

Solar modules – storage systems: Types, applications, requirements, efficiency, Lead acid batteries – power conditioning and regulation: Diodes, Regulators, Inverters- Balance of system components - protection – standalone PV systems design – sizing: Reliability maps, sizing for high reliability, existing methods.

# **GRID CONNECTED PV SYSTEMS**

PV systems in buildings – Utility applications for photo voltaic – design issues for central power stations – safety– Economic aspect – Efficiency and performance - International PV programs – Integration of PV and Wind –Indian Specific Standard for Integration.

# **ENERGY STORAGE SYSTEMS**

Impact of intermittent generation: Wind, gas and coal integration, impacts of cycling, PSCO case studies – Battery energy storage – solar thermal energy storage – pumped hydroelectric energy storage.

# APPLICATIONS

Water pumping – battery chargers – solar car – direct-drive applications –Space – Telecommunications.

# **Total Hours = 45**

<b>Operations Research</b>	Category	L	Т	P	Credit
operations Research	OE-EA	2	1	0	3

# Preamble

Operations Research is the study of optimization techniques. It is applied in decision theory. Rapid development and invention of new techniques occurred since the World War II essentially, because of the necessary to win the war with the limited resources available. It is applied for solving Inventory control problems, Maintenance and Replacement problems, Sequencing and Scheduling problems, Assignment of Jobs to applicants, Transportation problems, Network problems and Decision models. Entire subject is useful for all resource managers of various fields.

#### Prerequisite

Nil

#### **Course Objectives**

- 1. Develop linear programming problems and find solutions of LPP and apply in management decisions.
- 2. To acquire knowledge of linear programming, assignment and transportation problems.
- **3**. Techniques of PERT, CPM and sequencing.

4. Detailed knowledge of Inventory control.

5. Decision theory and Game theory techniques.

#### **Course Outcomes**

On the successful completion of the course, students will be able to

CO1.Formulate the LPP. Conceptualize the feasible region.	
Solve the LPP with two variables using graphical method and	Understand&
By simplex method.	Apply
CO2. Become familiar with the types of problems that can be solved by	
applying a transportation model. Be able to identify the special	
features of the assignment problem.	Apply
CO3. Solve network problems using CPM and PERT techniques and	
apply sequencing model.	Apply
CO4. Determine the order quantity. Determine the reorder point and	
safety stock for inventory systems. Design a continuous or periodic	
review inventory control system.	Apply
CO5. Apply replacement models. To make decisions in a competitive	
Environment it is a very common and important one.	Apply

#### Mapping with Programme Outcomes and Programme Specific Outcomes

#### SYLLABUS

#### LINEAR PROGRAMMING

Linear programming problem – Graphical method - Simplex method – Big M method – Duality principle.

#### **TRANSPORTATION MODEL**

Transportations problem – Assignment problem – Under Assignment -Travelling salesman problem

#### NETWORK MODEL

Project Network - CPM and PERT Networks - Critical path scheduling - Sequencing Models.

#### **INVENTORY MODELS**

Inventory Model – Economic Order Quantity Model – Purchasing Model (with and without shortages) – Manufacturing Model (with and without shortages) - Stochastic Inventory Model (Stock in discrete and continuous units).

#### **DECISION MODEL**

Decision Model – Game theory – Two Person Zero sum game – Algebraic solutions Graphical solutions – Replacement model – Model based on Service life – Economic life single / multivariable search technique.

# PREAMBLE

Engineering Project Management is a type of Project Management, focuses solely on engineering and Management. Similar to other Project Management it possess standard methodologies and processes with engineering background. It enables to get into the field of Project Management. These skills can provide critical benefits such as improved efficiency, enhanced effectiveness, success replication, perfect leadership and communication, and complete view of the project in the aspect of time and cost.

#### PREREQUISITE

Not Required

#### COURSE OBJECTIVES:

1. To understand the importance of Project Management.

2. To understand the Project management Techniques.

3. To understand the statistical process control.

4. To impart the various Project management tools and software.

5. To understand the Project management and resource utilization. **COURSE OUTCOMES:** 

After successful completion of the course, students will be able to CO1: Understand the importance of Project Management and Business.

CO1: Understand the importance of Project Management and Business.UnderstandCO2: Explain the required tools to implement Project Techniques.ApplyCO3: Analyze various Project constraints with help of project tools.AnalyzeCO4: Evaluating various Project Techniques.Analyze

Evaluate

CO5: Put forward the Project management in a different organization milieu.

#### SYLLABUS:

#### INTRODUCTION

Project Management concept-Attributes as a project-Project life cycle-The Project Management process-Benefits of Project Management- Needs, Identification-Project selection-preparing a request for proposal-Soliciting proposals-Proposed solutions- Proposal Marketing-Bid/No-Bid Decision-Developing Winning Proposal-Proposal preparation-Proposal contents-Pricing Consideration-Proposal Submission and Follow-up - Customer evaluation as proposals-Types of contracts-Contract provisions.

#### **PROJECT PLANNING**

Project Planning-Project Planning Objective-Work Break-down structure-Responsibility Matrix-Defining activities-Developing the network plan-Planning for Information system development- -Scheduling-activity duration estimates-project start and finish times-Schedule calculation-Scheduling for information systems development.

#### PROJECT CONTROL PROCESS

Schedule control-Project control process-Effects of actual schedule performance - Incorporating project changes into schedule-Updating the project schedule-Approaches to schedule control-Schedule control for information system development – Resource consideration-Constrained Planning-Planned resources utilization – Resources levelling- Limited scheduling-Project Management software – Cost Planning and Performance - Project cost Estimates-Project Budgeting-Determining actual cost-Determining the value of work performed-Cost performance analysis-Cost forecasting-Cost control-Managing Cash Flow.

#### **RISK AND FEASIBILITY**

Benchmarking – Reasons - Process- Quality Function Deployment (QFD) – House of Quality- QFD Process- Benefits- Taguchi Quality Loss Function- Total Productive Maintenance (TPM) – Concept-Improvement Needs- FMEA – Stages of FMEA.

#### PROJECT MANAGER SKILLS AND ABILITIES

Project Manager-Responsibilities of the Project Manager-Skills at the Project Manager - Developing the skill needed to be a Project Manager-Delegation-Managing Change – Project Team-Project Team development and Effectiveness- Ethical Behaviour conflict on project-problem solving-Time Management-Project Communication and Personal Communication-Effective listening-Meetings-Presentation-Report-Project documentation and Controlling changes-Types of project organization- Matrix organization.

<b>PROJECT WORK PHASE I</b>	EE-P	0	0	12	6

#### PREAMBLE

The primary emphasis of the project work phase-I is to understand and gain the knowledge of the principles of Computer Science and Engineering practices, so as to participate and manage main projects in

future.

#### PREREQUISITE

Nil

#### **COURSE OBJECTIVES**

	To import the practical knowledge to the students and also to make them to carry out the technical
1	procedures in their project work.
	To provide an exposure to the students to refer, read and review the research articles,
	journals and conference proceedings relevant to their project work and placing this as
2	their beginning stage for their final presentation.
3	To understand and gain the knowledge of the principles of engineering practices.
4	To Get good exposure and command in one or more application areas and on the software.
5	To participate and manage an innovative, social and economic engineering projects in future.

#### **COURSE OUTCOMES**

On the successful completion of the course, students will be able to

1. Survey the relevant literature such as books, national/international refereed journals and	
contact resource persons for the selected topic of research.	Analyze
2. Use different experimental techniques/different software / computational/analytical	
tools.	Apply
3. Design and develop an experimental set up/ equipment/test rig.	Analyze
4.Conduct tests on existing setups/equipments and draw logical conclusions from the	
results after analyzing them.	Analyze
5. Work in a research environment or in an industrial environment.	Apply

The Project Work will start in semester III and should preferably be a problem with research potential and should involve scientific research, design, generation/collection and analysis of data, determining solution and must preferably bring out the individual contribution. Seminar should be based on the area in which the candidate has undertaken the dissertation work as per the common instructions for all branches of M.E/M. Tech. The examination shall consist of the preparation of report consisting of a detailed problem statement and a literature review. The preliminary results (if available) of the problem may also be discussed in the report. The work has to be presented in front of the examiners panel set by Head and PG coordinator. The candidate has to be in regular contact with his guide and the topic of dissertation must be mutually decided by the guide and student.

the super depar panel	The student should continue the phase I work on the selected topic as per the formulated methodology under the same supervisor. At the end of the semester, after completing the work to the satisfaction of the supervisor and review committee, a detailed report should be prepared and submitted to the head of the department. The students will be evaluated based on the report submitted and the viva-voce examination by a panel of examiners including one external examiner.

# MANDATORY/ AUDIT COURSES

COURSE						
CODE	COURSE TITLE	CATEGORY	L	Т	Р	С
	ENGLISH FOR RESEARCH					
	PAPER WRITING	AC	0	0	2	0

#### PREAMBLE

Since the Research Papers are to be presented /published in English, students should be aware of the Research Methodology and Ethics.

#### PREREQUISITE

Nil

#### Course Objectives:

1.Understand the research problem formulation.

2.Need to analyze research-related information.

3.Evaluate and Follow research ethic.

4. Acquire the knowledge of compiling the research documents.

5. Acquire the knowledge of submitting a refined thesis.

# **Course Outcomes:**

course outcomes.	
Students are able to:	
1. Identify the research gap.	Understand
2. Interpret the research analysis.	Apply
3. Understand the ethical values in organizing a research paper.	Apply
4. Understand how a technical report can be organized.	
	Apply
5. Understand the format of a thesis.	Apply

# Syllabus

# Unit I Research

Meaning of research problem - Sources of research problem- Criteria Characteristics of agood research problem - Errors in selecting a research problem - Scope and objectives of research problem

# Unit II Data Analysis

Approaches of investigation of solutions for research problem - data collection, analysis, interpretation - Necessary instrumentations

# Unit III Plagiarism

Effective literature Reviews - approaches, analysis Plagiarism – Definition of Plagiarism – Consequences of Plagiarism – Unintentional Plagiarism – Forms of Plagiarism -Related Issues - Research ethics

# **Unit IV Research Paper Format**

Effective technical writing, how to write reports, Paper Developing a Research Proposal

# **Unit V Format**

Format of research proposal – Margin – Text Formatting - Heading and Title – Page Numbers – Tables and Illustrations – Corrections and Insertions – Binding – Bibliography

# **Total: 45 Periods**

# **TEXT BOOK**

# SYLLABUS UNIT I INTRODUCTION

Overview of Disaster Management – Distinguishing between an emergency and a Disaster situation. Disaster Management Cycle – Disaster management Act and Policy in India; Organisational structure for disaster management in India; Preparation of state and district disaster management plans- Phase I: Mitigation, and strategies; hazard Identification and vulnerability analysis. Disaster Mitigation and Infrastructure, impact of disasters on development programmes, vulnerabilities caused by development, developing a draft country-level disaster and development policy Phase II: Preparedness, Disaster Risk Reduction (DRR), Emergency Operation Plan (EOP) Phases III and IV: Response and recovery, Response aims, Response Activities, Modern and traditional responses to disasters, Disaster Recovery, and Plan

# UNIT II DISASTER PLANNING

Disaster Planning-Disaster Response Personnel and duties, Community Mitigation Goals, Pre-Disaster Mitigation Plan, Personnel Training, Volunteer Assistance, School-based Programmes, Hazardous Materials, Ways of storing and safely handling hazardous materials, Coping with Exposure

# UNIT III DISASTER COMMUNITY

Disaster Community-Community-based Initiatives in Disaster management, need for Community-Based Approach, categories of involved organizations: Government, Nongovernment organizations (NGOs), Regional and International Organizations, Panchayaths, Community Workers, National And Local Disaster Managers, Policy Makers, Grass-Roots Workers, Methods Of Dissemination Of Information, Community-Based Action Plan, Advantages/Disadvantages Of The Community Based Approach

# UNIT IV COPING WITH DISASTER

Coping Strategies; alternative adjustment processes - Changing Concepts of disaster management - Industrial Safety Plan; Safety norms and survival kits - Mass media and disaster management

# UNIT V CAPACITY BUILDING

Concept - Structural and Nonstructural Measures Capacity Assessment; Strengthening Capacity for Reducing Risk - Counter-Disaster Resources and their utility in Disaster Management - Legislative Support at the state and national levels
